Social Psychology and Personality

Topic 4.1 - Attribution Theory & Person Perception

1. What is an attribution in social psychology? An explanation or reasoning a person gives for why a certain behavior or event occurs.
2. Describe the difference between dispositional and situational attribution. Dispositional attribution explains a behavior as being caused by internal traits. While situational attribution explains a behavior as being influenced by external factors.
3. What is the attribution theory? A theory that explains how people interpret and assign causes to the behavior of themselves and others. Behaviors are explained by either dispositional or situational attribution.
4. Complete the table below.

Term	Description	Example
Self-serving bias	The tendency to attribute personal successes to dispositional attributions and failures to situational attributions.	A student says, "I got an A on the test because I'm smart", but if they failed they say, "I failed the test because the teacher made it too hard".
Actor-observer bias	The tendency to attribute our own behavior to situational attributions while attributing others' behavior to dispositional attributions.	When you're late, you blame the traffic, but when someone else is late you think that they are lazy and irresponsible.
Fundamental attribution error	The tendency to overemphasize dispositional attributions and underestimate situational factors when explaining another person's behavior.	You see a coworker arrive late to a meeting and think, "They're so lazy and disorganized," instead of considering they might have been stuck in traffic.

5. What is an explanatory style? This is how individuals consistently explain the causes of events in their lives (Think of it as a mindset).
6. Explain the difference between a person having an optimistic and pessimistic explanatory style. A person with an optimistic style will often credit positive outcomes to internal factors and negative outcomes to external factors. The individual believes good things happen to good people. While a person with a pessimistic style often will credit positive outcomes to external factors and negative outcomes to internal factors.
7. Define locus of control. An individual's belief about how much control they have over the events and outcomes in their life.
8. Explain the difference between internal and external locus of control. Individuals with a high internal locus of control believe that their actions, decisions, and efforts determine the outcomes of their life. While an individual with a high external locus of control believes that outside factors are what are responsible for what happens to them in life.
9. Complete the table below.

Concept	Description	Example
Mere exposure effect	A phenomenon where an individual develops a preference for something simply because they are familiar with it (The more familiar you become to something the more you gravitate towards it).	You hear a new song and dislike it, but after hearing it multiple times on the radio, you start to enjoy it.
Social comparison	The process of evaluating oneself by comparing them to others.	You compare your AP Psychology test scores to the scores of your classmates to determine how well you did.
Upward social comparison	The process of comparing yourself to someone who is better off or more skilled.	A college basketball player compares their own skills to other individuals in the NBA, hoping to learn from them.

Wisdom Learning Wendelin Küpers, Olen Gunnlaugson, 2016-12-01 In traditional business circles wisdom is viewed with a certain scepticism which is in part due to its historical associations with wisdom traditions and spiritual cultures However in

business today wisdom is emerging not only as a viable but also a necessary organizational and management practice In particular practical wisdom is being updated and retranslated for today s issues and concerns in organizations In recent years leadership and organizational studies have initiated important changes in the way in which business as usual is conducted In response to the increasingly complex and uncertain conditions of our international business environment a growing community of scholar practitioners are pushing the boundaries of traditional organizational and leadership thinking and acting making inroads into processes and applications of practical wisdom and ways of wise leading and managing Given the unprecedented levels of challenges dynamics and uncertainties that today s organizations are exposed to there is a need for a more integrative and sustainable approach to managing Following the need for a reconsideration and revival of the meaning of wisdom the editors explore vitalizing possibilities for the learning of wise practices in organizing and leading This expansive range of domains where wisdom is currently being explored suggests a promising number of perspectives and possibilities for future inquiries and explorations into the nexus of wisdom and organization leadership management education and learning that benefits from cross disciplinary synergies This book will be of interest to those seeking to understand the growing significance of wisdom in relation to learning and teaching especially in business and management education
