functions TME has been gradually recognized as a key contributor to cancer progression and drug resistance with cellular components in the TME able to enhance tumor resistance by recruiting and secreting multiple protective cytokines The acellular components of TME can mediate drug resistance by building physical barriers affecting tumor cell growth and metabolism etc Knowledge of the above is paving the way for identifying new targets and discovering new therapies Studying the dynamic relationship between tumor surroundings and neoplasm and clarifying the molecular mechanism of different factors refers to TME in the process of tumor progression are the key elements of cancer inhibition Currently there is a proliferation of publicly available tumor genomic databases Such as the Cancer Genome Atlas TCGA Gene Expression Omnibus GEO Surveillance Epidemiology and EndResults Program SEER International Cancer Genome Consortium ICGC and National Cancer Database NCDB These abundant public database resources enable researchers to mine multi omics cancer data to better understand the interactions between tumors and their microenvironment and to discover biomarkers and therapeutic targets in TME that are associated with tumorigenesis This provides new targets for early diagnosis and precise treatment of tumors In this research topic we would like to demonstrate the function and mechanism of tumor microenvironment in tumorigenesis and development through various methods including sequencing bioassay experimental models such as PDX and organoids We welcome original research articles and reviews dedicated to

- 1 Mechanisms of tumor microenvironment involvement in tumor progression
- 2 Bioinformatics or big data demonstrating the role of the tumor microenvironment in tumor progression
- 3 Molecular therapeutic mechanisms and clinical studies related to the tumor microenvironment
- 4 Biomarkers and therapeutic targets related to tumor microenvironment
- 5 Drug resistance mechanism related to tumor microenvironment

Novel Biomarkers for Predicting Response to Cancer Immunotherapy Jinghua Pan,Fu Wang,Jian Song,2023-07-11 Immunotherapy has revolutionized the treatment of malignancies Targeting of immune checkpoints cytotoxic T lymphocyte associated protein 4 programmed cell death protein 1 PD 1 and its ligand PD L1 has led to improving survival in a subset of patients Despite their remarkable success clinical benefit remains limited to only a subset of patients A significant limitation behind these current treatment modalities is an irregularity in clinical response which is especially pronounced among checkpoint inhibition Currently relevant predictors of cancer immunotherapy response include microsatellite instability high deficient mismatch repair MSI H dMMR expression of PD L1 tumor mutation burden TMB immune genomic characteristics and tumor infiltrating lymphocytes TILs However none of them have sufficient evidence to be a stratification factor Moreover as the combined strategies for effective cancer immunotherapy had been developed in multiple tumors such as Immunotherapy combined with chemotherapy radiotherapy targeted therapy and anti angiogenesis therapy Therefore the development of novel biomarkers endowed with high sensitivity specificity and accuracy able to identify which patients may truly benefit from the treatment with cancer immunotherapy would allow to refine the

Novel Approaches in Microbiome Analyses and Data Visualization Jessica Galloway-Peña, Michele Guindani, 2019-02-06 High throughput sequencing technologies are widely used to study microbial ecology across species and habitats in order to understand the impacts of microbial communities on host health metabolism and the environment Due to the dynamic nature of microbial communities longitudinal microbiome analyses play an essential role in these types of investigations Key questions in microbiome studies aim at identifying specific microbial taxa enterotypes genes or metabolites associated with specific outcomes as well as potential factors that influence microbial

communities However the characteristics of microbiome data such as sparsity and skewedness combined with the nature of data collection reflected often as uneven sampling or missing data make commonly employed statistical approaches to handle repeated measures in longitudinal studies inadequate Therefore many researchers have begun to investigate methods that could improve incorporating these features when studying clinical host metabolic or environmental associations with longitudinal microbiome data In addition to the inferential aspect it is also becoming apparent that visualization of high dimensional data in a way which is both intelligible and comprehensive is another difficult challenge that microbiome researchers face Visualization is crucial in both the analysis and understanding of metagenomic data Researchers must create clear graphic representations that give biological insight without being overly complicated Thus this Research Topic seeks to both review and provide novel approaches that are being developed to integrate microbiome data and complex metadata into meaningful mathematical statistical and computational models We believe this topic is fundamental to understanding the importance of microbial communities and provides a useful reference for other investigators approaching the field
