**Agency and Self-awareness** Johannes Roessler,Naomi Eilan,2003 Leading philosophers and psychologists join forces to investigate a set of problems to do with agency and self awareness in seventeen specially written essays In recent years there has been much psychological and neurological work purporting to show that consciousness and self awareness play no role in causing actions and indeed to demonstrate that free will is an illusion The essays in this volume subject the assumptions that motivate such claims to sustained interdisciplinary scrutiny Patients with Anarchic Hand

syndrome sometimes find their hands perform apparently goal directed actions which the patients disown yet seem to be unable to suppress for example reaching out for someone else's food in a restaurant On the face of it these patients lack the kind of control and self awareness we ordinarily take ourselves to have when acting intentionally Questions raised by this phenomenon include What is involved in being aware of an action as one's own What is the nature of the control these patients are lacking and which characterizes normal intentional actions What is the relation between a priori explanations of consciousness and self consciousness on the one hand and empirical work on the information processing mechanisms involved in action control on the other Questions of action control and self awareness tend to be treated separately in both philosophy and psychology The central idea behind this volume is that outstanding unresolved issues on both topics and in both disciplines can only be resolved by an interdisciplinary examination of the relations between them The editors useful introductory essay offers a guide to cross disciplinary reading of the contributions and makes connections between them explicit The book will be compulsory reading for psychologists and philosophers working on action explanation and for anyone interested in the relation between the brain sciences and consciousness *Talk to Her* A.
