The Golden Thread Fuad Udemans, 2013-09-23 This book is an account of a ten year experiment whereby the scientist became an entrepreneur so as to experience his own theoretical model applied in a live social system society Profit motives and the clinical nature of science became muddled with norms rules and laws of social systems and how different people applied and responded to these rules The insights to be gained from this journey are often surprising The book highlights many counter intuitive outcomes It also reveals how certain individuals interpret societys rules and norms despite their design to ensure fair and equitable social systems Indeed the manipulation of social laws and standards by those with strong fields of power is self evident and it is explored in a unique manner Understanding how the field of power can be manipulated suggests that no matter how bleak ones current position may be it is very possible and relatively easy to escape conditions of poverty oppression and subjugation vital issues that citizens in all countries face today

Biosphere Origin and Evolution Nikolay Dobretsov, Nikolay Kolchanov, Alexey Rozanov, Georgy Zavarzin, 2007-12-03 This monograph contains articles based on the oral presentations given at the International Workshop on the Biosphere Origin and Evolution BOE 2005 held in Novosibirsk Russia June 26 29 2005 The organizers of the event were the Scientific Programme of the Presidium of the Russian Academy of Sciences which involves 50 institutes of the Russian Academy of Sciences

Systemics of Emergence Gianfranco Minati, Eliano Pessa, Mario Abram, 2006 Within the General Systems Theory GST approach it is possible to focus on emergent systemic properties typically occurring in open adaptive anticipatory and chaotic systems by stressing their specificity and their lack of reducibility into further components In other words emergence underlies the processes allowing the establishing of systemic properties Research on emergence deals with experimental detection modeling and simulation of processes giving rise to the occurrence of macroscopic often complex and unexpected behaviors in complex systems consisting of a

large number of components. Actually, such a theoretical and experimental effort relies on analytical methods such as the ones used in modern theories of self-organization, collective behaviors, phase transitions, and artificial life. In sum, the research on emergence analyzes the engine of GST, while GST itself focuses on the general outcomes of this research, thus conceptually inducing an inter- and transdisciplinary context.

SYSTEMICS OF EMERGENCE Research and Development is a volume devoted to exploring the core theoretical and disciplinary research problems of emergence processes from which systems are established. It focuses on emergence as the key point of any systemic process. This topic is dealt with within different disciplinary approaches indicated by the organization in sections: 1 Applications, 2 Biology and human care, 3 Cognitive Science, 4 Emergence, 5 General Systems, 6 Learning, 7 Management, 8 Social Systems, 9 Systemic Approach and Information Science, 10 Theoretical issues in Systemics. The Editors and contributing authors have produced this volume to help encourage and widen the work in this area of General Systems Research.

Virtual Immortality – God, Evolution, and the Singularity in Post- and Transhumanism Oliver Krüger, 2021-10-01. In recent years, ideas of post- and transhumanism have been popularized by novels, TV series, and Hollywood movies. According to this radical perspective, humankind and all biological life have become obsolete. Traditional forms of life are inefficient at processing information and inept at crossing the high frontier outer space. While humankind can expect to be replaced by their own artificial progeny, posthumanists assume that they will become an immortal part of a transcendent superintelligence. Krüger's award-winning study examines the historical and philosophical context of these futuristic promises by Ray Kurzweil, Nick Bostrom, Frank Tipler, and other posthumanist thinkers.

The Evolution of Human Settlements William M. Bowen, Robert E. Gleeson, 2018-08-03. This book analyzes the history and development of settlements from the earliest periods in human history to the present day from a Darwinian evolutionary perspective. At the foundation of the evolutionary model is the argument that the human capacity for complex communication and unique problem-solving ability have led to the formation and reality of the modern city and its scaled-up megacity status. While evolutionary theory forms the platform for the book's argument, general systems theory provides the operational framework for the organization and interpretations of each chapter. Throughout the book, the authors tackle various issues, questions, and possibilities regarding the future development and evolution of human settlements.

Evolution, Culture, and the Human Mind Mark Schaller, Ara Norenzayan, Steven J. Heine, Toshio Yamagishi, Tatsuya Kameda, 2011-03-17. An enormous amount of scientific research compels two fundamental conclusions about the human mind: The mind is the product of evolution, and the mind is shaped by culture. These two perspectives on the human mind are not incompatible, but until recently, their compatibility has resisted rigorous scholarly inquiry. Evolutionary psychology documents many ways in which genetic adaptations govern the operations of the human mind. But evolutionary inquiries only occasionally grapple seriously with questions about human culture and cross-cultural differences. By contrast, cultural psychology documents many ways in which thought and behavior are shaped by different cultural experiences. But

cultural inquires rarely consider evolutionary processes Even after decades of intensive research these two perspectives on human psychology have remained largely divorced from each other But that is now changing and that is what this book is about *Evolution Culture and the Human Mind* is the first scholarly book to integrate evolutionary and cultural perspectives on human psychology The contributors include world renowned evolutionary cultural social and cognitive psychologists These chapters reveal many novel insights linking human evolution to both human cognition and human culture including the evolutionary origins of cross cultural differences The result is a stimulating introduction to an emerging integrative perspective on human nature
