

The Human Cell

Cells: The smallest functional units of the body, grouped together to form tissues.
Tissues: Have specialised function (e.g. blood, muscle and bone), tissues group to form organs.
Organs: Are grouped together to form systems.
Systems: Perform functions that maintain homeostasis.

Simple Cell

A cell consists of a plasma/cell membrane inside which there are a number of organelles floating in a watery fluid called cytoplasm. Organelles are small structures with highly specialised functions.

Nucleus

- Every cell has one apart from mature erythrocytes (red blood cells).
- The largest organelle.
- It contains the information genes which determines cellular structure and function.

Plasma/Cell Membrane

- Semi permeable membrane that surrounds the cell.
- 2 layers of phospholipids (fatty substance)
- Only small particles such as water and oxygen can pass in and out of the cell.

Endoplasmic Reticulum

- Interconnecting membranous canals in the cytoplasm.
- 2 types: rough and smooth.
- They provide a site for synthesis of proteins that are exported from the cells to be used in other cells within the body.

Mitochondria

- sausage shaped structures, POWERHOUSE of the cell, they produce energy.
- Involved in aerobic respiration, the process in which chemical energy is available within the cell.

Cytoplasm

- Fluid within the plasma/cell membrane.
- It surrounds and supports the other structures of the cells interior.

Ribosomes

- Tiny granules, help with the production of proteins to be used within the cell.

Golgi Apparatus

- Stacks of folded and flattened membranous sacs.
- Responsible for exporting proteins across the plasma/cell membrane.

Lysosomes

- One type of secretory vesicles formed from the Golgi Apparatus.
- They break down food into particles for the rest of the cell can use, as well as breaking down old cells.
"CLEAN UP CREWS"

Nucleolus

- Found in the nucleus.
- Produces and assembles ribosomes.

Cell Function

For a cell to successfully carry out its function, every cell in the body must be supplied with:

- **Oxygen:** Essential for life! Chemical activity within the cells require oxygen.
- **Nutrition:** Cells require food or nutrition! This is in the form of sugar, fats, proteins, vitamins and minerals.
- **Water:** The medium for all chemical activity within the body.

The transfer of substances into and out of the cell is required for its survival. The methods used to transport substances across the cell membrane are **diffusion** and **osmosis**. This is influenced by certain physical processes and properties of the semi-permeable membrane.

Diffusion

This is the movement of dissolved substances from an area of high concentration to an area of low concentration, down the concentration gradient until equilibrium is reached on both sides of the membrane.

Osmosis

This is the net movement of water across a semi-permeable membrane from an area of low solute concentration to an area of high solute concentration, until equilibrium is reached on both sides of the membrane.

The Physiology Of Cells

James Sneyd

The Physiology Of Cells:

The Physiology of Immunity James A. Marsh, Marion D. Kendall, 1996-07-24 The study of neuroendocrine immune interactions has become a highly visible and fast growing segment of mainstream immunology This book provides an overview of the immune system and in depth coverage of the many different areas that make up neuroendocrine immune research The main emphasis is on the physiology of the processes involved stressing an integrated approach to immunology The text is organized in seven sections beginning with an introduction to the immune system Section II outlines how the central nervous system CNS communicates with central and peripheral lymphoid organs Section III provides information on factors from the immune system that act as messengers to the CNS The metabolic regulation of growth and development is discussed in Section IV Section V examines the interactions occurring between the reproductive and immune systems The effects of other physiologic stressors on immunity are reviewed in Section VI Section VII considers cyclic and periodic influences on the immune system Finally there is a consideration of a new unifying theory for immunology Students researchers clinicians and veterinary scientists can discover new areas of interest in specific diseases and immune interactions in this novel presentation [Cell Physiology Source Book](#) Nick Sperelakis, 2012-01-11 Cell Physiology Source Book gathers together a broad range of ideas and topics that define the field It provides clear concise and comprehensive coverage of all aspects of cellular physiology from fundamental concepts to more advanced topics The 4e contains substantial new material Most chapters have been thoroughly reworked The book includes chapters on important topics such as sensory transduction the physiology of protozoa and bacteria and synaptic transmission Authored by leading researchers in the field Clear concise and comprehensive coverage of all aspects of cellular physiology from fundamental concepts to more advanced topics Full color illustrations **Cell Physiology Source Book** Nicholas Sperelakis, 1998 This authoritative book gathers together a broad range of ideas and topics that define the field It provides clear concise and comprehensive coverage of all aspects of cellular physiology from fundamental concepts to more advanced topics The Third Edition contains substantial new material Most chapters have been thoroughly reworked The book includes chapters on important topics such as sensory transduction the physiology of protozoa and bacteria the regulation of cell division and programmed cell death **The Physiology of Excitable Cells** David J. Aidley, 1998-09-03 The fourth edition of this highly successful text has been extensively revised and restructured to take account of the many recent advances in the subject and bring it right up to date The classic observations of recent years can now be interpreted with the powerful new techniques of molecular biology Consequently there is much new material throughout the book including many new illustrations and extensive references to recent work Its essential philosophy remains the same though fundamental concepts are clearly explained and key experiments are examined in some detail This textbook will be used by students of physiology neuroscience cell biology and biophysics Specializing undergraduates and graduates as well as lecturers and researchers will find the text thorough and

clearly written **The Physiology of Cells** Karl F. Guthe,1968 **The Physiology of The Eye** Hugh Davson,2012-12-02

The Physiology of the Eye Third Edition reviews major advances in the physiology of the eye including improvements in photochemical and electrophysiological techniques In particular the successful application of modern microelectrode techniques to the recording of activity at all stages in the visual pathway is considered This edition is organized into five sections and begins with an overview of the vegetative physiology and biochemistry of the eye emphasizing the aqueous humor and the intraocular pressure the vitreous body cornea and lens The following chapters discuss the mechanism of vision including the electrophysiology of the retina and some fundamental principles of ocular physiology An account of the important advances made possible by the application of modern methods to the analysis of the eye movements pupillary function and so on is also given The remaining sections focus on the theoretical and practical foundation laid by the work of classical research workers in the realm of physiological optics This book is intended for students and researchers in fields ranging from ocular science to physiology and biochemistry A Revolution in the Physiology of the Living Cell Gilbert N. Ling,1992 A new theory of the living cell the association induction hypothesis has been proposed This book examines this revolution in cell physiology which has successfully withstood 25 years of world wide testing It has already generated magnetic resonance imaging MRI An Introduction to Mathematical Modeling in Physiology, Cell Biology, and Immunology James Sneyd,2002 In many respects biology is the new frontier for applied mathematicians This book demonstrates the important role mathematics plays in the study of some biological problems It introduces mathematicians to the biological sciences and provides enough mathematics for bioscientists to appreciate the utility of the modelling approach The book presents a number of diverse topics such as neurophysiology cell biology immunology and human genetics It examines how research is done what mathematics is used what the outstanding questions are and how to enter the field Also given is a brief historical survey of each topic putting current research into perspective The book is suitable for mathematicians and biologists interested in mathematical methods in biology **Cell Physiology** Arthur Charles Giese,1968 *Cell Physiology Sourcebook* Nicholas Sperelakis,2001-05-15 This completely revised and updated source book provides comprehensive and authoritative coverage of cell physiology and membrane biophysics Intended primarily as a text for advanced undergraduate and graduate students and as a reference for researchers this multidisciplinary book includes several new chapters and is an invaluable aid to scientists interested in cell physiology biophysics cell biology electrophysiology and cell signaling Includes broad coverage of both animal and plant cells Appendices review basics of the propagation of action potentials electricity and cable properties
