Lewis,2014-05-19 The American Frontier An Archaeological Study of Settlement Pattern and Process focuses on general rules or laws for the evolution of all agrarian frontiers emphasizing those that are expanding A variety of frontiers is also discussed in addition to the agrarian type to pinpoint similarities and differences Organized into 11 chapters this book first elucidates the processes of frontier colonization and then describes the frontier model employed for the interpretation of documentary and material evidence for the examination of the development of South Carolina frontier Some chapters then focus on the examination of South Carolina s colonial past in terms of the model to determine its degree of conformity with the latter and to set the stage for the archaeological study the development of archaeological hypotheses and a consideration of the material record Other types of frontiers are characterized by separate developmental processes and several of these are discussed in Chapter 10 as avenues for further research This book will be valuable to scholars in several fields including history geography and anthropology Historical archaeologists will find it especially useful in designing research in former colonial areas and in modeling additional kinds of frontier change

Forest Prairie Edge Merle Massie,2014-04-26 Saskatchewan is the anchor and epitome of the prairie provinces even though half of the province is covered by boreal forest The Canadian penchant for dividing this vast country into easily understood regions has reduced the Saskatchewan identity to its southern prairie denominator and has distorted cultural and historical interpretations to favour the prairie south Forest Prairie Edge is a deep time investigation of the edge land or ecotone between the open prairies and boreal forest region of Saskatchewan Ecotones are transitions from one landscape to another where social economic and cultural practices of different landscapes are blended Using place history and edge theory Massie considers the role and importance of the edge ecotone in building a diverse social and economic past that contradicts traditional prairie narratives around settlement economic development and culture She offers a refreshing new perspective that overturns long held assumptions of the prairies and the Canadian west **Migrations spontanées en Indonésie** Muriel Charras,Marc Pain,Indonesia. Departemen Transmigrasi,Centre national de la recherche scientifique (France),1993 **American Geography and Geographers** Geoffrey J. Martin,2015 The rise of American geography as a distinctive science in the United States straddles the 19th and 20th centuries extending from the post Civil war period to

1970 *American Geography and Geographers Toward Geographic Science* is the first book to thoroughly and richly explicate this history. Its author Geoffrey J. Martin, the foremost historian on the subject and official archivist of the Association of American Geographers, amassed a wealth of primary sources from archives worldwide which enable him to chart the evolution of American geography with unprecedented detail and context. From the initial influence of the German school to the emergence of Geography as a unique discipline in American universities and thereafter, Martin clarifies the what, how, and when of each advancement. Expansive discussion of the arguments made, controversies ignited, and research voyages move hand in hand with the principals who originated and animated them: Davis, Jefferson, Huntington, Bowman, Johnson, Sauer, Hartshorne, and many more. From their grasp of local, regional, global, and cultural phenomena, geographers also played pivotal roles in world historical events, including the two world wars and their treaties, as the US became the dominant global power. *American Geography and Geographers Toward Geographical Science* is a conclusive study of the birth and maturation of the science. It will be of interest to geographers, teachers, and students of geography, and all those compelled by the story of American Geography and those who founded and developed it. *Proceedings of the Symposium on the Protection Against Radiation Hazards in Space: Shielding against space radiations*, 1962. [Landscapes of Promise](#) William G. Robbins, 2009-11-23. *Landscapes of Promise* is the first comprehensive environmental history of the early years of a state that has long been associated with environmental protection. Covering the period from early human habitation to the end of World War II, William Robbins shows that the reality of Oregon's environmental history involves far more than a discussion of timber cutting and land use planning. Robbins demonstrates that ecological change is not only a creation of modern industrial society. Native Americans altered their environment in a number of ways, including the planned annual burning of grasslands and light burning of understory forest debris. Early Euro-American settlers, who thought they were taming a virgin wilderness, were merely imposing a new set of alterations on an already modified landscape. Beginning with the first 18th-century traders on the Pacific Coast, alterations to Oregon's landscape were closely linked to the interests of global market forces. Robbins uses period speeches and publications to document the increasing commodification of the landscape and its products. "Environment melts before the man who is in earnest," wrote one Oregon booster in 1905, reflecting prevailing ways of thinking. In an impressive synthesis of primary sources and historical analysis, Robbins traces the transformation of the Oregon landscape and the evolution of our attitudes toward the natural world. [American Empire](#) Neil Smith, 2004-10-29. *American Empire* challenges our deepest assumptions about the rise of American globalism in the twentieth century and puts geography back into the History of what is called the American Century.
