Joe unfolds an inspiring telling of the power of love, optimism, and hope. This is not a story about death. This is a story about love.

Growing Slow Bible Study Jennifer Dukes Lee, 2021-05-11 We want to believe that a slower life is possible, but we're afraid of what we'll miss if we don't keep up the pace. So we bend to the pressure and miss the gift of rest and slowness. What if we could move from a place of depleting hurry to grasp the high reward of good things grown slowly? In this Bible study, which accompanies a trade book by the same name, Jennifer Dukes Lee helps readers dig deep into Scripture to reveal how land is a picture of our slow growth into claiming the promises of God. The land is more than a backdrop for the Bible; it is a central part of the magnificent narrative from the very beginning when Creator God used dirt to make life on a farm called Eden. Jennifer weaves these biblical lessons into her own experience of the importance of land gleaned from her fifth-generation farm. The land, both then and now, teaches us how to unhurry our hurry-sick hearts.

Skill Training in Multimodal Virtual Environments Massimo Bergamasco, Benoit Bardy, Daniel Gopher, 2012-08-24 The advent of augmented reality technologies used to assist human operators in complex manipulative operations has brought an urgency to research into the modeling and training of human skills in Virtual Environments. However, modeling a specific act still represents a challenge in cognitive science. The same applies for the control of humanoid robots and the replication of skilled behavior of avatars in Virtual Environments. *Skill Training in Multimodal Virtual Environments* presents the scientific background, research outcomes, engineering developments, and evaluation studies conducted during the five years 2006-2011 of the project SKILLS: Multimodal Interfaces for Capturing and Transfer of Skill, funded by the European Commission under its 6th Framework Programme for Research and Technological Development. The SKILLS project evaluated how to exploit robotics and virtual environment technologies for the training of specific skills. This book details the novel approach used in the study to cope with skill acquisition, setting aside the mainstream assumptions of common computer-assisted training simulators. It explores how the SKILLS approach generated new training scenarios that allow users to practice new experiences in the performance of the devised task. Using a carefully designed approach that balances science with practicality, the book explores how virtual and augmented reality systems can be designed to address the skill transfer and training in different application contexts. The application of the same roadmap to skills originating from domains such as sports, rehabilitation, industrial environment, and surgery sets this book apart. It demonstrates how technology-oriented training conditions can yield better results than more traditional
