Small Office Building Handbook Design For Reducing First Costs Utility Costs:

Small Office Building Handbook Burt Hill Kosar Rittelmann Associates, 1985-01-01 Proceedings of the Solar Buildings Conference March 18-20, 1985, Washington D.C., 1985 *Fundamentals of Building Energy Dynamics* Bruce D. Hunn, 1996

Fundamentals of Building Energy Dynamics assesses how and why buildings use energy and how energy use and peak demand can be reduced. It provides a basis for integrating energy efficiency and solar approaches in ways that will allow building owners and designers to balance the need to minimize initial costs, operating costs, and life cycle costs with the need to maintain reliable building operations and enhance environmental quality both inside and outside the building. Chapters trace the development of building energy systems and analyze the demand side of solar applications as a means for determining what portion of a building's energy requirements can potentially be met by solar energy. Following the introduction, the book provides an overview of energy use patterns in the aggregate U.S. building population. Chapter 3 surveys work on the energy flows in an individual building and shows how these flows interact to influence overall energy use. Chapter 4 presents the analytical methods, techniques, and tools developed to calculate and analyze energy use in buildings, while chapter 5 provides an extensive survey of the energy conservation and management strategies developed in the post energy crisis period. The approach taken is a commonsensical one, starting with the proposition that the purpose of buildings is to house human activities and that conservation measures that negatively affect such activities are based on false economies. The goal is to determine rational strategies for the design of new buildings and the retrofit of existing buildings to bring them up to modern standards of energy use. The energy flows examined are both large scale heating systems and small scale choices among appliances. **Solar Heat Technologies Fundamentals and Applications Volume 4**

Heating and Cooling of Buildings T. Reddy, Jan F. Kreider, Peter S. Curtiss, Ari Rabl, 2016-09-01

Heating and Cooling of Buildings: Principles and Practice of Energy Efficient Design Third Edition is structured to provide a rigorous and comprehensive technical foundation and coverage to all the various elements inherent in the design of energy efficient and green buildings. Along with numerous new and revised examples, design case studies, and homework problems, the third edition includes the HCB software along with its extensive website material, which contains a wealth of data to support design analysis and planning. Based around current codes and standards, the Third Edition explores the latest technologies that are central to design and operation of today's buildings. It serves as an up-to-date technical resource for future designers, practitioners, and researchers wishing to acquire a firm scientific foundation for improving the design and performance of buildings and the comfort of their occupants. For engineering and architecture students in undergraduate and graduate classes, this comprehensive textbook
