Smart Business Networks:

Smart Business Networks Peter H.M. Vervest, Eric van Heck, Ken Preiss, Louis-Francois Pau, 2004-09-06 Scientists from management and strategy information systems engineering and telecommunications have discussed a novel concept Smart Business Networks They see the future as a developing web of people and organizations bound together in a dynamic and unpredictable way creating smart outcomes from quickly re configuring links between actors The question is What should be done to make the outcomes of such a network smart that is just a little better than that of your competitor More agile with less pain with more return to all the members of the network now and over time The technical answer is to create a business operating system that should run business processes on different organisational platforms Business processes would become portable The end to end management of processes running across many different organizations in many different forms would become possible This book presents you the outcomes of an energizing and new direction in management science

Agile Network Businesses Vivek Kale, 2017-07-20 A highly readable and yet comprehensive book on network businesses that have become governable with the advent of cloud and big data computing Vivek Kale is a master of simplifying the complex world of network theory and its relevance to business Jagdish N Sheth Charles H Kellstadt Professor of Marketing Emory University Agile Network Businesses Collaboration Coordination and Competitive Advantage reflects the shift from traditional networks to virtual and agile networks that enable businesses to operate dynamically thereby representing markets more closely This book enables IT managers and business decision makers to understand clearly what network businesses and enterprises are what they can do for them and how to realize them Customers in geographically dispersed markets are demanding higher quality products in a greater variety at lower cost and in a shorter time Thus enterprises have moved from a few centralized and vertically integrated facilities to geographically dispersed networks of capabilities competencies and resources which are the core of network businesses Enterprises are now constructing more fluid network businesses in which each member facility focuses on differentiation and relies increasingly on its partners suppliers and customers to provide the rest Network businesses have emerged as an organizational paradigm for collaboration and coordination across loosely connected individual organizations This pragmatic book Introduces network solutions and distributed systems that are a first step towards enabling a network enterprise It also gives a detailed description of networks and agent system that have paved the road to network enterprises Describes the basics of service oriented architecture SOA cloud computing and big data that are essential to network enterprises Details the distinguishing aspects of network enterprises which include virtual enterprises management of network enterprises and collaborative network enterprises Covers such major application areas as supply manufacturing e business platform social and wireless sensor networks Introduces decision networks in the context of supply chain networks This book reinterprets the traditional supply chain in terms of the flow of decisions information and materials which leads to reconfiguring the traditional supply

chain network into mutually separate decision networks e.g. fourth party logistics or 4PL information networks e.g. wireless sensor networks and logistics networks e.g. third party logistics or 3PL

Digital Enterprises Henderik A. Proper, Bas van Gils, Kazem Haki, 2023-11-14 This book explores different aspects of and provides concrete suggestions to meet the three main challenges for becoming a Digital Enterprise: the transition to the digital age, the emergence of service ecosystems and the growing role of data as a key underlying resource. As a result of these intertwined and mutually amplifying trends, today's enterprises are confronted with several challenges that profoundly impact their design, from the definitions of products and services offered to their clients via the business processes that deliver these products and services to the underlying IT infrastructure. The contributions, which are written by leading enterprise architecture researchers and managers of large corporations, cover four key aspects which form each one part of the book. Part I presents experiences how different enterprises currently already need to embrace and exploit new challenges like blockchain, customer-centric services or value co-creation networks. Part II looks at the need for a new design logic, i.e. the need for new ways of thinking regarding the design of enterprises. Part III is concerned with the coordination needed among different stakeholders of the ensuing continuous transformations. Part IV eventually reflects on the ongoing consequences for enterprise modeling as used to capture both the current affairs of an enterprise as well as design study its possible future affairs. The target audience of this book are both master and PhD level students who want to gain insights into key aspects of the challenges confronting digital enterprises as well as enterprise architects and information managers working in enterprises that are on their way to become digital.

Networked Digital Technologies, Part II Filip Zavoral, Jakub Yaghob, Pit Pichappan, Eyas El-Qawasmeh, 2010-06-30 On behalf of the NDT 2010 conference, the Program Committee and Charles University in Prague, Czech Republic, we welcome you to the proceedings of the Second International Conference on Networked Digital Technologies NDT 2010. The NDT 2010 conference explored new advances in digital and Web technology applications. It brought together researchers from various areas of computer and information sciences who addressed both theoretical and applied aspects of Web technology and Internet applications. We hope that the discussions and exchange of ideas that took place will contribute to advancements in the technology in the near future. The conference received 216 papers, out of which 85 were accepted, resulting in an acceptance rate of 39%. These accepted papers are authored by researchers from 34 countries covering many significant areas of Web applications. Each paper was evaluated by a minimum of two reviewers. Finally, we believe that the proceedings document the best research in the studied areas. We express our thanks to the Charles University in Prague, Springer, the authors and the organizers of the conference.

The Network Experience Peter H.M. Vervest, Diederik W. van Liere, Li Zheng, 2008-10-14 Digital networking technologies are empowering organizations to form dynamic networks generating exceptional or smart results. These Smart Business Networks (SBNs) enable individual organizations to compete more effectively and to respond better to a changing world. This idea attracted a diverse group of academic scholars and

business professionals to Beijing from May 19 23 2008 hosted by Tsinghua University They discovered new ways to manage network resources operate business processes across a network create a business operations platform understand the importance of network position and the smart mastering of technology Effective managers they concluded must have a firm understanding of these fundamental network concepts in order to orchestrate the networks of the future This book presents the results of an intense and energizing event which resulted in new theoretical foundations and practical insights

Business Aspects of Web Services Christof

Weinhardt, Benjamin Blau, Tobias Conte, Lilia Filipova-Neumann, Thomas Meinel, Wibke Michalk, 2011-11-10 Driven by maturing Web service technologies and the wide acceptance of the service oriented architecture paradigm the software industry's traditional business models and strategies have begun to change software vendors are turning into service providers In addition in the Web service market a multitude of small and highly specialized providers offer modular services of almost any kind and economic value is created through the interplay of various distributed service providers that jointly contribute to form individualized and integrated solutions This trend can be optimally catalyzed by universally accessible service orchestration platforms service value networks SVN which are the underlying organizational form of the coordination mechanisms presented in this book Here the authors focus on providing comprehensive business oriented insights into today's trends and challenges that stem from the transition to a service led economy They investigate current and future Web service business models and provide a framework for Web service value networks Pricing mechanism basics are introduced and applied to the specific area of SVN Strategies for platform providers are analyzed from the viewpoint of a single provider and so are pricing mechanisms in service value networks which are optimal from a network perspective The extended concept of pricing Web service derivatives is also illustrated The presentation concludes with a vision of how Web service markets in the future could be structured and what further developments can be expected to happen This book will be of interest to researchers in business development and practitioners such as managers of SMEs in the service sector as well as computer scientists familiar with Web technologies The book's comprehensive content provides readers with a thorough understanding of the organizational economic and technical implications of dealing with Web services as the nucleus of modern business models which can be applied to Web services in general and Web service value networks specifically

Collaborative Networks for a Sustainable World Luis M. Camarinha-Matos, Xavier Boucher, Hamideh Afsarmanesh, 2010-10-02 Collaborative Networks for a Sustainable World Aiming to reach a sustainable world calls for a wider collaboration among multiple stakeholders from different origins as the changes needed for sustainability exceed the capacity and capability of any individual actor In recent years there has been a growing awareness both in the political sphere and in civil society including the business sectors on the importance of sustainability Therefore this is an important and timely research issue not only in terms of systems design but also as an effort to borrow and integrate contributions from different disciplines when designing and organizing those systems The discipline of collaborative networks especially which has already emerged in many application sectors shall play a key role in the implementation of effective sustainability strategies PRO VE 2010 focused on sharing knowledge and experiences as well as identifying directions for further research and development in this area The conference discussed models infrastructures support tools and governance principles developed for collaborative networks as important resources to support multi stakeholder sustainable developments Furthermore the challenges of this theme open new research directions for CNs PRO VE 2010 held in St
