Retail Geography Shuguang Wang, Paul Du, 2020-05-26 The retail sector is an integral part of a national economy From the political economy perspective all consumer goods have surplus values locked up in them the surplus values are not realized until the

consumer goods are purchased by consumers through various distribution channels As such retailing is the essential link between production and consumption The success of a retail business depends on two general factors the location of the retail outlet and management of the business Both factors are equally important If the business is located in the wrong place with the wrong customer base it will not generate expected sales Similarly if the business is poorly managed and operated it will not perform well even if the location is right Influenced by both traditional and new location theories Retail Geography is conceptualized and organized using the retail planning process as the framework The technical and methodological chapters help guide the reader with detailed descriptions of the techniques and are supported with practical examples to reflect the latest software development Retail Geography provides a state of the art summary and will act as a core textbook for undergraduate and graduate students of economic geography interested in specializing in retail and business geography The practical examples also make it a valuable handbook for practitioners in the field as well as students of retail management and commercial real estate management Tourism eBook GURMEET SINGH DANG, Dance Canada ,1985

Developing a Successful Subsidiary Strategy Paul Lyons,2023-09-18 Most books on business strategy approach the subject from a corporate perspective covering topics such as the vision for the business the marketplace competition and differentiation However the reality is that most managers work in sub units or subsidiaries of the business and they are not involved in corporate strategy formulation Their strategic concerns are with the positioning and future trajectory of their own units within the complex internal ecosystem in which they exist If these units are to survive and grow the middle managers responsible for them must plan their future maximise their value add and compete for resources within the internal market of their corporations Such internal markets are becoming increasingly volatile due to general economic conditions but also given the questioning of globalisation and increasing corporate concerns about the frailties of international supply chains as brought into sharp focus by the COVID 19 crisis and the war in Ukraine This book provides practical perspectives for these business unit managers and a step by step toolkit that can be used by management teams to develop a successful subsidiary strategy that acknowledges these challenges while maximising their contribution to corporate objectives It is based on the author s 30 years of experience as an executive in a complex multinational IBM organisation supplemented by academic study at Master s and PhD levels The material covered has been verified through workshops over a 3 year period with the senior leadership teams of over 30 multinational subsidiaries operating from Ireland *The Canadian Mining and*
