

NEUTRON MODERATION

In thermal reactors, the neutrons that cause fission are at a much lower energy than the energy level at which they were born from fission. In this type of reactor, specific materials must be included in the reactor design to reduce the energy level of the neutrons in an efficient manner.

Neutron Slowing Down and Thermalization

Fission neutrons are produced at an average energy level of 2 MeV and immediately begin to slow down as the result of numerous scattering reactions with a variety of target nuclei. After a number of collisions with nuclei, the speed of a neutron is reduced to such an extent that it has approximately the same average **kinetic energy** as the atoms (or molecules) of the medium in which the neutron is undergoing elastic scattering. This energy, which is only a small fraction of an electron volt at ordinary temperatures (0.025 eV at 20 °C), is frequently referred to as the thermal energy, since it depends upon the temperature.

Neutrons whose energies have been reduced to values in this region (< 1 eV) are designated thermal neutrons. The process of reducing the energy of a neutron to the thermal region by elastic scattering is referred to as *thermalization*, *slowing down*, or *moderation*.

The material used for the purpose of thermalizing **neutrons** is called a *moderator*. A good moderator reduces the speed of neutrons in a small number of collisions but does not absorb them to any great extent. Slowing the neutrons in as few collisions as possible is desirable in order to reduce the amount of neutron leakage from the core and also to reduce the number of **resonance** absorptions in non-fuel materials.

The ideal moderating material (moderator) should have the following nuclear properties:

- large scattering cross section,
- small absorption cross section,
- large energy loss per collision.

A convenient measure of energy loss per collision is the logarithmic energy decrement. The *average logarithmic energy decrement* is the average decrease per collision in the logarithm of the neutron energy. This quantity is represented by the symbol ξ .

$$\xi = \ln E_i - \ln E_f$$

Neutron Physics Karl-Heinrich Beckurts, Karl Wirtz, 2013-06-29 This book is based upon a series of lectures I have occasionally given at the University of Gottingen since 1951 They were meant to introduce the students of experimental physics to the work in a neutron physics laboratory dealing with the problem of measuring neutron flux diffusion length Fermi age effective neutron temperature absorption cross sections and similar problems Moreover these lectures were intended to prepare the students for a subsequent lecture covering the physics of nuclear reactors The original character of this series of lectures has been retained in the book It is intended for use by students as well as anyone desiring to work on neutron physics measurements The first half mainly covers the theory of neutron fields i.e. essentially diffusion and slowing down theory The second half is largely concerned with measurements in neutron fields The appendix contains information and data which in our experience are frequently required in a neutron laboratory The field of nuclear physics proper is briefly touched upon in the first two chapters but only to the extent necessary for the understanding of the following chapters The multitude of applications of neutron radiation has not been covered The conclusion of this manuscript coincided with the end of my long period of activity with the Max Planck Institut fur Physik at Gottingen To Professor HEISENBERG I owe thanks for his advice and suggestions for many of the subjects treated here **Neutron Moisture Gauges** John Foster Cameron, 1970

Neutronic Analysis For Nuclear Reactor Systems Bahman Zohuri, 2019-02-09 This expanded new edition develops the theory of nuclear reactors from the fundamentals of fission to the operating characteristics of modern reactors The first half of the book emphasizes reactor criticality analysis and all of the fundamentals that go into modern calculations Simplified one group diffusion theory models are presented and extended into sophisticated multi group transport theory models The second half of the book deals with the two main topics of interest related to operating reactors reactor kinetics dynamics and in core fuel management Additional chapters have been added to expand and bring the material up to date and include the utilization of more computer codes Code models and detailed data sets are provided along with example problems making this a useful text for students and researchers wishing to develop an understanding of nuclear power and its implementation in today's modern energy spectrum Covers the fundamentals of neutronic analysis for nuclear reactor systems to help understand nuclear reactor theory Describes the benefits uses safety features and challenges related to implementation of Small Modular Reactors Provides examples data sets and code to assist the reader in obtaining mastery over the subjects

Melton, 2002 **Handbook on Radiation Probing, Gauging, Imaging and Analysis** E.M. Hussein, 2007-08-09 The need for this book arose from my teaching engineering and search experience in the non power aspects of nuclear technology The lack of a comprehensive textbook in industrial applications of radiation frustrated my students who had to resort to a multitude of textbooks and research publications to familiarize themselves with the fundamental and practical aspects of radiation technology As an engineer I had to acquire the design aspects of radiation devices by trial and error and often by accidental reading of a precious publication As a researcher and a supervisor of graduate students I found that the needed literature was either hard to find or too scattered and diverse More than once I discovered that what appeared to be an exciting new idea was an old concept that was tried a few decades earlier during the golden era of Atom for Peace I am hoping therefore that this book will serve as a single comprehensive reference source in a growing field that I expect will continue to expand This book is directed to both neophytes and experts and is written to combine the old and the new the basic and the advanced the simple and the complex It is anticipated that this book will be of help in living older concepts improving and expanding existing techniques and promoting the development of new ones
