Small Scale Map Projection Design:

Small-Scale Map Projection Design Frank Canters, 2002-02-21 The use of computers in cartography has made it easier for map makers to transform data from one map projection to another and experiment with alternative representations of geographical data This has created new challenges and opportunities for map projection scientists Small Scale Map Projection Design focuses on numerical map projection research and is written from the perspective of the map projection user It demonstrates how advances in the measurement of map projection distortion and in the development of low error map projections can help map makers decide what type of map projection is best for their purpose and shows how they can eventually design their own map projections

Small-Scale Map Projection Design Frank Canters, 2002-02-21 The use of computers in cartography has made it a lot easier for map makers to transform data from one map projection to another and experiment with alternative representations of geographical data Yet this has also created new challenges and opportunities for map projection scientists Small Scale Map Projection Design focuses on numerical map projection research and is written from the perspective of the map projection user It demonstrates how advances in the measurement of map projection distortion and in the development of low error map projections can help map makers decide what type of map projection is best for their purpose and shows how they can eventually design their own tailor made map projections A number of significant contributions have been made to the subject over recent decades and these are reviewed along with a substantial amount of original unpublished material This theoretical material is tied to practical applications and issues such as map projection use optimization and selection which are far too often carried out with simple rules of thumb methods

Choosing a Map Projection Miljenko Lapaine, E. Lynn Usery, 2017-04-04 This book offers a much needed critical approach to the intelligent use of the wide variety of map projections that are rapidly and inexpensively available today It also discusses the distortions that are immanent in any map projection A well chosen map projection is one in which extreme distortions are smaller than those in any other projection used to map the same area and in which the map properties match its purpose Written by leading experts in the field including W Tobler F C Kessler S E Battersby M P Finn K C Clarke V S Tikunov H Hargitai B Jenny and N Fran ula This book is designed for use by laymen The book editors are M Lapaine and E L Usery Chair and Vice Chair respectively of the ICA Commission on Map Projections for the period 2011 2015

The Routledge Handbook of Mapping and Cartography Alexander J. Kent, Peter Vujakovic, 2017-10-04 This new Handbook unites cartographic theory and praxis with the principles of cartographic design and their application It offers a critical appraisal of the current state of the art science and technology of map making in a convenient and well illustrated guide that will appeal to an international and multi disciplinary audience No single volume work in the field is comparable in terms of its accessibility currency and scope The Routledge Handbook of Mapping and Cartography draws on the wealth of new scholarship and practice in this emerging field from the latest conceptual developments in mapping and advances in map

making technology to reflections on the role of maps in society It brings together 43 engaging chapters on a diverse range of topics including the history of cartography map use and user issues cartographic design remote sensing volunteered geographic information VGI and map art The title s expert contributions are drawn from an international base of influential academics and leading practitioners with a view to informing theoretical development and best practice This new volume will provide the reader with an exceptionally wide ranging introduction to mapping and cartography and aim to inspire further engagement within this dynamic and exciting field The Routledge Handbook of Mapping and Cartography offers a unique reference point that will be of great interest and practical use to all map makers and students of geographic information science geography cultural studies and a range of related disciplines

GIS Cartography Gretchen N. Peterson, 2020-11-24

Since the publication of the bestselling second edition 5 years ago vast and new globally relevant geographic datasets have become available to cartography practitioners and with this has come the need for new ways to visualize them in maps as well as new challenges in ethically disseminating the visualizations With new features and significant updates that address these changes this edition remains faithful to the original vision that cartography instruction should be software agnostic Discussing map design theory and technique rather than map design tools this book focuses on digital cartography and its best practices This third edition has completely new sections on how to deal with maps that go viral and the ethics therein new presentation ideas new features such as amenities climate data and hazards the new Equal Earth projection and vector tile design considerations All chapters are thoroughly updated with new illustrations and new sections for datasets that didn t exist when the second edition was published as well as new techniques and trends in cartography New in the third edition A true textbook written with a friendly style and excellent examples explaining everything from layout design to fonts and colors to specific design considerations for individual feature types to static and dynamic cartography issues Thoroughly updated with new features such as points of interest climate data hazards and buildings new projections such as the Equal Earth projection and the Spilhaus projection and vector tile design considerations such as label placement techniques and tricks for making world class basemaps Includes over 70 new map examples that display the latest techniques in cartography Reflects on new developments in color palettes visualization patterns datums and non static output media such as animation interaction and large format cinematic techniques that weren t available for the second edition Defines and illustrates new terms that have made their way into the profession over the last few years such as story maps flow maps Dorling cartograms spec sheets bivariate choropleths firefly cartography Tanaka contours and value by alpha In this third edition author Gretchen Peterson takes a don t let the technology get in the way approach to the presentation focusing on the elements of good design what makes a good map and how to get there rather than specific software tools She provides a reference that you can thumb through time and again as you create your maps Copiously illustrated the third edition explores novel concepts that kick start your pursuit of map making excellence The book doesn t just teach you how to design and create

good maps it teaches you how to design and create superior maps

Working with Map Projections Fritz Kessler, Sarah Battersby, 2019-05-03 A map projection fundamentally impacts the mapmaking process Working with Map Projections A Guide to Their Selection explains why for any given map there isn't a single best map projection Selecting a projection is a matter of understanding the compromises and consequences of showing a 3 D space in two dimensions The book presents a clear understanding of the processes necessary to make logical decisions on selecting an appropriate map projection for a given data set The authors discuss the logic needed in the selection process describe why certain decisions should be made and explain the consequences of any inappropriate decision made during the selection process This book also explains how the map projection will impact the map's ability to fulfill its purpose uses real world data sets as the basis for the selection of an appropriate map projection and provides illustrations of an appropriately and inappropriately selected map projection for a given data set The authors take a novel approach to discussing map projections by avoiding an extensive inventory of mathematical formulae and using only the mathematics of map projections that matter for many mapping tasks They also present information that is directly applicable to the process of selecting map projections and not tied to a specific software package Written by two leading experts this book is an invaluable resource for anyone studying or working with geospatial data from students to experienced professionals and will help readers successfully weigh the pros and cons of choosing one projection over another to suit a map's intended purpose

Principles of Map Design Judith A. Tyner, 2017-09-12 This authoritative reader friendly text presents core principles of good map design that apply regardless of production methods or technical approach The book addresses the crucial questions that arise at each step of making a map Who is the audience What is the purpose of the map Where and how will it be used Students get the knowledge needed to make sound decisions about data typography color projections scale symbols and nontraditional mapping and advanced visualization techniques Pedagogical Features Over 200 illustrations also available at the companion website as PowerPoint slides including 23 color plates Suggested readings at the end of each chapter Recommended Web resources Instructive glossary
