Background: Camp Oasis is an annual week-long camp serving children with inflammatory bowel disease (IBD) and hosted by the Crohn's and Colitis Foundation. Youth with IBD are at increased risk for mental health challenges, with Camp Oasis potentially mitigating these risks. The aim of this study is to measure change in and predictors of social-emotional well-being and protective factors of self-worth as a result of attending Camp Oasis.

Methods: Between 2012 and 2019, a voluntary survey was administered to participants and their caregivers to reflect on their perceptions of social-emotional well-being and protective factors related to chronic disease. T-tests compared change in participants' and caregivers' perceptions before and after camp; path analyses examined the key predictors of social-emotional well-being.

Results: A total of 6051 online surveys were analyzed. Participants and caregivers reported consistently positive perceptions of participants' experiences during and after camp. Significant improvements in confidence, independence, activity, comfort around others, being more open about disease, and taking medication as expected were observed. Being new to Camp Oasis was one of the strongest predictors of both disease-related self-efficacy and social connections after camp.

Conclusions: The uniformly high rates of participants' perceptions during camp suggest camp is a life-changing experience for youth with IBD, reduces disease-related stigma, and enhances confidence and social skills. Participants' positive experiences appear to foster notable benefits after camp in terms of openness, their sense of belonging, connections, and confidence.

Lay Summary

Camp Oasis is a life-changing experience for children with inflammatory bowel disease. This review of participant and caregiver surveys confirms camp's significant positive impact on well-being, social connections, and medication compliance. These findings should generate additional enthusiasm in Camp Oasis.

Key Words: camp, IBD, Crohn's disease, ulcerative colitis, pediatric IBD, well-being, mental health

Introduction

Approximately 70 000 to 80 000 youth in the United States are currently diagnosed with inflammatory bowel disease (IBD), consisting of Crohn's disease and ulcerative colitis.¹ These youth are at increased risk for depression, anxiety, and social-emotional difficulties, which may continue into adulthood.^{2–4} The etiology of these difficulties may be attributed to

disease symptomatology and challenges with or side effects from treatment, but also stigma and social isolation experienced by youth with IBD.⁵

For more than 20 years, Camp Oasis, a week-long camp administered by the Crohn's and Colitis Foundation across 12 locations in the United States, has provided an overnight summer camp experience for youth with IBD. Each camp
