Abstract. This chapter presents a conceptual and selective review of the relationship between social support and cardiovascular illness and death. It is argued that cardiovascular health is not only determined by biological factors but also by social and psychological factors. For decades, epidemiological studies have linked mortality rates to marital status and social networks, thus indicating a beneficial effect of such social factors on longevity. Moreover, studies on cardiac patients have attributed increased survival rates to the existence of close social bonds. In the case of conjugal loss, for example, widowers are at risk of illness and death in the absence of a compensating network of support providers. Health psychology is looking for the mediating mechanisms that help explain such epidemiological associations. For this purpose, social support is distinguished from social integration, and further differentiations are made to better understand the quality and function of interaction processes that result in favorable health outcomes. Physiological, behavioral, and psychological pathways are distinguished in the etiology of disease, signifying differences in how people may respond to stressful encounters and critical life changes.

1. Social integration and social support

People can be predisposed to illness by long-term experiences of social isolation, neglect, loneliness, and social stress. Before discussing some current issues in the relationship between social factors (as predictors) and illness and death (as outcomes), the conceptual background of the former needs to be made clear. The term "social support" is often used in a broader sense, including social integration and social networks. In this chapter, too, we will use it as a summary term in the title and headings. However, these three notions should be clearly distinguished. *Social networks* represent the objective basis for social integration and social support. The latter two are seen as theoretical constructs. They refer to the degree to which individuals are socially embedded, have a sense of belonging and intimacy, and tangible needs are met, such as assistance, guidance, and access to information. Social integration and social support need to be distinguished. *Social integration* refers to the structure and quantity of social relationships, such as the size and density of networks, frequencies of interaction, but sometimes also to subjective perceptions of embeddedness. *Social support*, in contrast, refers to the function and quality of social relationships, such as perceived availability of help or actually received support. It occurs through an interactive process and can be related to altruism, a sense of obligation, and the perception of reciprocity [1, 2, 3]. Both constructs have been related to ill health and mortality which represents the topic of the present chapter.

Social Support and Cardiovascular Disease Sally A. Shumaker, Susan M. Czajkowski, 2013-11-21 In this groundbreaking work distinguished contributors explore the myriad relationships between networks of social support and the development treatment and rehabilitation of individuals with cardiovascular disease Chapters span the range from conceptual to methodological issues and take into account gender environmental and cultural differences The book will provide a wealth of information for clinicians and students in the fields of behavioral medicine psychophysiology and cardiovascular disease

Heart Disease Gerdi Weidner, Mária Kopp, Margareta Kristenson, 2002 Annotation This book addresses one major question Why do men get more heart disease than women Recent global trends in heart disease show that traditional coronary risk factors such as elevated blood pressure and cholesterol are poor candidates in explaining the gender gap in heart disease Changes in these risk factors also cannot explain the recent cardiovascular disease epidemic among middle aged men in Eastern Europe This book will focus on environmental behavioral and psychosocial variables as well as new risk factors of a biological nature in an attempt to understand the gender gap in heart disease It combines perspectives from numerous disciplines such as demography epidemiology medicine sociology and psychology This book features the work of a distinguished group of international researchers appearing in Richard Stone's report on Stress the invisible hand in Eastern Europe's death rates Science vol 288 June 9 2000 pp 1732-33 It combines perspectives from numerous disciplines such as demography epidemiology medicine nutrition sociology and psychology to explore the environmental behavioral and psychosocial influences on men's greater susceptibility to heart disease

Behavioral Medicine Approaches to Cardiovascular Disease Prevention Kristina Orth-Gomér, Neil Schneiderman, Kristina Orth-Gomér, 2013-05-13 Cardiovascular disease CVD is the number one killer of men and women in industrialized countries In older age groups CVD is also the most important cause for hospitalization and in many countries it is the basis of early retirement from work Thus CVD is associated with enormous costs for care and loss of productivity as well as for disabilities pensions etc All this has motivated clinicians and scientists to develop and implement new methodologies and technologies to better care for patients who are hospitalized for heart disease Efforts to improve care in the acute phases of coronary heart disease CHD have been successful During the last decade the immediate mortality risk of a patient admitted to coronary care for a suspected myocardial infarction or other acute coronary syndrome has decreased to less than 10% Despite these achievements CVD continues to represent a major threat to the health of middle aged and elderly men and women This volume addresses myriad aspects of CHD prevention including biobehavioral and psychosocial factors behavioral epidemiology behavioral intervention models and policy The first section of the text provides an introduction to CVD prevention and behavioral medicine The second section introduces two theoretically different approaches to preventive action high risk and population based strategies The third section describes and discusses the important questions of how

behavioral sciences can be conceptually integrated into traditional medically based preventive efforts. The fourth section presents both population and high risk behavioral intervention approaches. In summary, this volume examines the social environment and its potentials for preventive actions, reviews the psychosocial and biobehavioral mechanisms involved in these effects, and describes concrete and practical implementations of behavioral medicine knowledge as they have been applied to CHD prevention.

Handbook of Health Psychology Andrew Baum, Tracey A. Revenson, Jerome Singer, 2012-04-27. Considered the most comprehensive handbook in the field, this rich resource reviews the biological, psychological, and social factors that affect health, health behavior, and illness. Many chapters review the latest theories and research, while others illustrate how research is translated into clinical and community interventions to improve physical health and emotional well-being. Chapters examine health behavior processes within the social contexts in which we live, including family, social, and cultural communities. The handbook cuts across concepts: behavior change, populations, women's health, risk and protective factors, obesity, and diseases, making it appropriate for a variety of readers from various fields. Featuring contributions from the top researchers and rising stars in the field, each author provides a theoretical foundation, evaluates the empirical evidence, and makes suggestions for future research, clinical practice, and/or policy. Novices to the field appreciate the accessibly written chapters, while seasoned professionals appreciate the book's deep, cutting-edge coverage. Significantly updated throughout, the new edition reflects the latest approaches to health psychology today, with greater emphasis on translating research into practice and policy, more on the socio-cultural aspects of health, including socioeconomic status, gender, race, ethnicity, sexual orientation, and aging. Two new sections on risk and protective factors for disease and another on social and structural influences that affect health, more on prevention, interventions, and treatment in the applications section, an expansion of the bio-psycho-social model across several levels of analysis, including cultural, macro-social, and cellular factors. The book opens with the field's central theories, emphasizing the interaction of biological and social systems. Part II reviews the mechanisms that help explain the link between health and behavior across diseases and populations. The all-new Part III focuses on variables that lead to the onset of major diseases or that are instrumental in promoting health. Part IV, also new to the second edition, highlights social and structural influences on health. The book concludes with applications of research to specific illnesses and medical conditions. The Handbook serves as a text in graduate or upper-level undergraduate courses in health psychology, taught in psychology, public health, medical sociology, medicine, nursing, and other social and allied health sciences. Its cutting-edge, comprehensive coverage also appeals to researchers and practitioners in these fields.
