Sociocybernetics Volume 2:

Sociocybernetics R.F. Geyer, J. van der Zouwen, 2012-12-06 The fifteen papers comprising this book were chosen out of the sixty one contributions to the Symposium and Section on Social Systems held in the context of the Fourth International Congress of Cybernetics and Systems Amsterdam The Netherlands 21-25 August 1978 These papers assembled here on the basis of their topicality, depth and originality cover a wide range of problems ranging from Societies and Turing machines to Dialectics and catastrophe An interesting array of themes is considered by authors from six countries It is felt that these papers, some of them thought provoking and of great merit, will cast new light on social problems Though the contributions consider a wide variety of topics the underlying trend is apparent in many instances Of special value is the discussion of the relevance of cybernetics and systems to a wide spectrum of social problems I think the treatment and the approach adopted by the contributors merit wide attention since their contributions constitute an appreciable advance in a fairly novel field 1 ROSE BLACKBURN U K May 1978 Acknowledgements First of all we want to thank the authors for their contributions to these volumes often produced under severe time pressure We are particularly indebted to publisher Hans van der Sluijs and desk editor Judy Marcure for their helpful cooperation in having both volumes edited and published on schedule

Sociocybernetics Rudolf F. Geyer, Johannes van der Zouwen, 2001-01-30 In an effort to shed light on recent developments in sociocybernetic research this volume represents recent and advanced thinking in this rapidly developing field The authors address the core problems in social science caused by increasing societal complexity and analyze the inadequacy of many of the methodological tools still used for grappling with nonlinear self-organizing systems Together the 18 contributors propose elements of a new methodology based on sociocybernetic principles aimed at describing and explaining the growth of societal complexity the contribution of autopoiesis of societal subunits to more societal complexity and the new simulation based methodology needed to observe complex social systems This unique volume contributes to a greater understanding of sociocybernetics and its uses as a method for researching modern problems of increasing complexity and interdependence The first part of the book deals with increasing societal complexity and contains chapters on its overall development the complexity of brain environment interaction loops organizational change the development of human values and the increasing interpenetration of societal subsystems The second part concentrates on a current issue in sociocybernetics autopoiesis or self production The chapters included in Part II concentrate on embodied cognition on the applicability of autopoiesis to business firms on its roots in Aristotelian philosophy and on the possibility of societal control and steering in democratic societies Part III more focused on methodology discusses the difficulties inherent in observing complex social systems The chapters deal with the problems of cross cultural comparative research simulation of the evolution of social systems longitudinal simulation of education systems and the methodological difficulties associated with analyzing the unexpected complexities of mutually interacting nonlinear systems *ICoRD'15 - Research into Design Across Boundaries*

Estep, 2013-06-29 This book is multi and interdisciplinary in both scope and content It draws upon philosophy the neurosciences psychology computer science and engineering in efforts to resolve fundamental issues about the nature of immediate awareness Approximately the first half of the book is addressed to historical approaches to the question whether or not there is such a thing as immediate awareness and if so what it might be This involves reviewing arguments that one way or another have been offered as answers to the question or ways of avoiding it It also includes detailed discussions of some complex questions about the part immediate awareness plays in our over all natural intelligence The second half of the book addresses intricate and complex issues involved in the computability of immediate awareness as it is found in simple ordinary things human beings know how to do as well as in some highly extraordinary things some know how to do Over the past 2 500 years human culture has discovered created and built very powerful tools for recognizing classifying and utilizing patterns found in the natural world The most powerful of those tools is mathematics the language of nature The natural phenomenon of human knowing of natural intelligence generally is a very richly textured set of patterns that are highly complex dynamic self organizing and adaptive *Models of Bounded Rationality: Empirically grounded economic reason* Herbert Alexander Simon, 1997 Offering alternative models based on such concepts as satisficing acceptance of viable choices that may not be the undiscoverable optimum and bounded rationality the limited extent to which rational calculation can direct human behaviour Simon shows why more empirical research based on experiments and direct observation rather than just statistical analysis of economic aggregates is needed The Rush to Policy Peter William House, Roger Roger Don Shull, Rush to Policy explores the appropriate role of technical analysis in policy formulation The authors ask when and how the use of sophisticated analytic techniques in decision making benefits the nation They argue that these techniques are too often used in situations where they may not be needed or understood by the decision maker where they may not be to answer the questions raised but are nonetheless required by law House and Shull provide an excellent empirical base for describing the impact of politics on policies policy analysis and policy analysts They examine cost benefit analysis risk analysis and decision analysis and assess their ability to substitute for the current decision making

process in the public sector They examine the political basis of public sector decision making how individuals and organizations make decisions and the ways decisions are made in the federal sector Also they discuss the mandate to use these methods in the policy formulation process The book is written by two practicing federal policy analysts who in a decade of service as policy researchers developed sophisticated quantitative analytic and decision making techniques They then spent several years trying to use them in the real world Success and failures are described in illuminating detail providing insight not commonly found in such critiques The authors delineate the interaction of politics and technical issues Their book describes policy analysis as it is not how it ought to be Peter W House is the director of policy research and analysis at the National Science Foundation He is the author of ten books on multidisciplinary science and technology policy research and analyses in government private and university sectors including *The Art of Public Policy Analysis* and with Roger D Shull *Regulatory Reform Politics and the Environment and Regulations and Science Management of Research on Demand* Roger D Shull is a senior analyst at the Division of Policy Research and Analysis National Science Foundation

Policymaking Under Adversity Yehezkel Dror, 2017-09-29 This groundbreaking study systematically treats recent policymaking trends starting with a reconsideration of salient theoretical issues of policymaking and its study and culminating with a survey of current policy related predicaments in various countries Dror proposes that the task for social science research is to uncover underlying causes of policymaking inadequacies Standard research methods Dror states have been unable to uncover the realities of important decisions made inside governments In order to gain an understanding of pressing predicaments he believes that policymakers need to examine the foundations of contemporary practices of present assumptions and that they need a multiplicity of approaches to policymaking After prescribing a set of requirements that policymaking must satisfy in order to adequately respond to challenges Dror posits several improvements needed in education and in policy decision making The book concludes with an extensive bibliography including numerous important German works not found in other English language studies This book supplements the earlier basic theory and models propounded in Dror's *Public Policymaking Reexamined* by dealing with current trends As a guide to public policy literature
