*Soft Computing for Intelligent Control and Mobile Robotics* Oscar Castillo, Witold Pedrycz, 2010-10-05. This book describes in a detailed fashion the application of hybrid intelligent systems using soft computing techniques for intelligent control and mobile robotics. Soft Computing (SC) consists of several intelligent computing paradigms including fuzzy logic, neural networks and bio inspired optimization algorithms which can be used to produce powerful hybrid intelligent systems. The prudent combination of SC techniques can produce powerful hybrid intelligent systems that are capable of solving real world problems. This is illustrated in this book with a wide range of applications with particular emphasis in intelligent control and mobile robotics. The book is organized in five main parts which contain a group of papers around a similar subject. The first part consists of papers with the main theme of theory and algorithms which are basically papers that propose new models and concepts which can be the basis for achieving intelligent control and mobile robotics. The second part contains papers with the main theme of intelligent control which are basically papers using bio inspired techniques like evolutionary algorithms and neural networks for achieving intelligent control of non linear plants. The third part contains papers with the theme of optimization of fuzzy controllers which basically consider the application of bio inspired optimization methods to automate the design process of optimal type 1 and type 2 fuzzy controllers. The fourth part contains papers that deal with the application of SC techniques in times series prediction and intelligent agents. The fifth part contains papers with the theme of computer vision and robotics which are papers considering soft computing methods for applications related to vision and robotics.

**Soft Computing Techniques in Software Engineering** Om Prakash Sangwan, SINGH YOGESH, YOGESH SINGH, 2012. Soft computing techniques have emerged as the most popular and widely used techniques in the field of Software Engineering as they offer the advantages of reduced cost, time, maintenance and increased productivity. In this book, few soft computing techniques i.e. Fuzzy Logic (FL), Neural Network (NN) and Neuro Fuzzy (NF) have been proposed to automate the software development process and are found to be suitable at the various phases of software development. The book is organized into nine chapters according to the phases of Software Development Life Cycle (SDLC). Effective utilization of soft computing techniques should result in increased productivity and quality, reduced cycle time and lesser costs in the long run. Therefore, this book is useful to further explore various emerging soft computing technologies including neural computing techniques such as Support Vector Machine (SVM), Adaptive Neuro Fuzzy Inference System (ANFIS), hybrid
