Soft Computing For Reservoir Characterization And Modeling:

Soft Computing for Reservoir Characterization and Modeling Patrick Wong, Fred Aminzadeh, Masoud Nikravesh, 2013-11-11 In the middle of the 20th century Genrich Altshuller a Russian engineer analysed hundreds of thousands of patents and scientific publications From this analysis he developed TRIZ G Altshuller 40 Principles TRIZ Keys to Technical Innovation TRIZ Tools Volume 1 First Edition Technical Innovation Center Inc Worcester MA January 1998 Y Salamatov TRIZ The Right Solution at the Right Time A Guide to Innovative Problem Solving Insytex B V 1999 the theory of inventive problem solving together with a series of practical tools for helping engineers solving technical problems Among these tools and theories the substance field theory gives a structured way of representing problems the patterns of evolution show the lifecycle of technical systems the contradiction matrix tells you how to resolve technical contradictions using the forty principles that describe common ways of improving technical systems For example if you want to increase the strength of a device without adding too much extra weight to it the contradiction matrix tells you that you can use Principle 1 Segmentation or Principle 8 Counterweight or Principle 15 Dynamicity or Principle 40 Composite Materials I really like two particular ones Principle 1 Segmentation and Principle 15 Dynamicity Segmentation shows how systems evolve from an initial monolithic form into a set of independent parts then eventually increasing the number of parts until each part becomes small enough that it cannot be identified anymore

Evolving Rule-Based Models Plamen P. Angelov, 2013-03-20 The idea about this book has evolved during the process of its preparation as some of the results have been achieved in parallel with its writing One reason for this is that in this area of research results are very quickly updated Another is possibly that a strong unchallenged theoretical basis in this field still does not fully exist From other hand the rate of innovation competition and demand from different branches of industry from biotech industry to civil and building engineering from market forecasting to civil aviation from robotics to emerging e commerce is increasingly pressing for more customised solutions based on learning consumers behaviour A highly interdisciplinary and rapidly innovating field is forming which focus is the design of intelligent self adapting systems and machines It is on the crossroads of control theory artificial and computational intelligence different engineering disciplines borrowing heavily from the biology and life sciences It is often called intelligent control soft computing or intelligent technology Some other branches have appeared recently like intelligent agents which migrated from robotics to different engineering fields data fusion knowledge extraction etc which are inherently related to this field The core is the attempts to enhance the abilities of the classical control theory in order to have more adequate flexible and adaptive models and control algorithms

Fuzzy Partial Differential Equations and Relational Equations Masoud Nikravesh, Lofti A. Zadeh, Victor Korotkikh, 2014-03-12 During last decade significant progress has been made in the oil industry by using soft computing technology Underlying this evolving technology there have been ideas transforming the very language we use to describe problems with imprecision uncertainty and partial truth These developments offer exciting opportunities but at the same

time it is becoming clearer that further advancements are confronted by fundamental problems. The whole idea of how human process information lies at the core of the challenge. There are already new ways of thinking about the problems within theory of perception based information. This theory aims to understand and harness the laws of human perceptions to dramatically improve the processing of information. A matured theory of perception based information is likely to be properly positioned to contribute to the solution of the problems and provide all the ingredients for a revolution in science, technology, and business. In this context, Berkeley Initiative in Soft Computing (BISC), University of California, Berkeley, from one side and Chevron/Texaco from another, formed a Technical Committee to organize a Meeting entitled "State of the Art Assessment and New Directions for Research" to understand the significance of the field's accomplishments, new developments, and future directions. The Technical Committee selected and invited 15 scientists and industry experts as technical committee members from the related disciplines to participate in the Meeting, which took place at the University of California, Berkeley, on March 15-17, 2002.

Towards Efficient Fuzzy Information Processing Chongfu Huang, Yong Shi, 2012-11-03. When we learn from books or daily experience, we make associations and draw inferences on the basis of information that is insufficient for understanding. One example of insufficient information may be a small sample derived from observing experiments. With this perspective, the need for developing a better understanding of the behavior of a small sample presents a problem that is far beyond purely academic importance. During the past 15 years, considerable progress has been achieved in the study of this issue in China. One distinguished result is the principle of information diffusion. According to this principle, it is possible to partly fill gaps caused by incomplete information by changing crisp observations into fuzzy sets so that one can improve the recognition of relationships between input and output. The principle of information diffusion has been proven successful for the estimation of a probability density function. Many successful applications reflect the advantages of this new approach. It also supports an argument that fuzzy set theory can be used not only in soft science where some subjective adjustment is necessary but also in hard science where all data are recorded.

Enhance Oil and Gas Exploration with Data-Driven Geophysical and Petrophysical Models Keith R. Holdaway, Duncan H. B. Irving, 2017-10-04. Leverage Big Data analytics methodologies to add value to geophysical and petrophysical exploration data. Written by two geophysicists with a combined 30 years in the industry, this book shows you how to leverage continually maturing computational intelligence to gain deeper insight from specific exploration data. Case studies illustrate the value propositions of this alternative analytical workflow, and in-depth discussion addresses the many Big Data issues in geophysics and petrophysics. From data collection and context through real-world everyday applications, this book provides an essential resource for anyone involved in oil and gas exploration. Recent and continual advances in machine learning are driving a rapid increase in empirical modeling capabilities. This book shows you

how these new tools and methodologies can enhance geophysical and petrophysical data analysis increasing the value of your exploration data Apply data driven modeling concepts in a geophysical and petrophysical context Learn how to get more information out of models and simulations Add value to everyday tasks with the appropriate Big Data application Adjust methodology to suit diverse geophysical and petrophysical contexts Data driven modeling focuses on analyzing the total data within a system with the goal of uncovering connections between input and output without definitive knowledge of the system's physical behavior This multi faceted approach pushes the boundaries of conventional modeling and brings diverse fields of study together to apply new information and technology in new and more valuable ways Enhance Oil Gas Exploration with Data Driven Geophysical and Petrophysical Models takes you beyond traditional deterministic interpretation to the future of exploration data analysis

Aggregation Operators Tomasa

Calvo, Gaspar Mayor, Radko Mesiar, 2012-12-06 1 The increasing number of research papers appeared in the last years that either make use of aggregation functions or contribute to its theoretical study assess its growing importance in the field of Fuzzy Logic and in others where uncertainty and imprecision play a relevant role. Since these papers are published in many journals, few books and several proceedings of conferences books on aggregation are particularly welcome. To my knowledge, *Aggregation Operators: New Trends and Applications* is the first book aiming at generality and I take it as a honour to write this Foreword in response to the gentle demand of its editors Radko Mesiar, Tomasa Calvo and Gaspar Mayor. My pleasure also derives from the fact that twenty years ago I was one of the first Spaniards interested in the study of aggregation functions and this book includes work by several Spanish authors. The book contains nice and relevant original papers authored by some of the most outstanding researchers in the field and since it can serve as the editors point out in the Preface as a small handbook on aggregation, the book is very useful for those entering the subject for the first time. The book also contains a part dealing with potential areas of application so it can be helpful in gaining insight on the future developments.

Intelligent Agents and Their Applications Zhengxin Chen, Nikhil Ichalkaranje, 2013-03-20 Intelligent agents are one of the most promising business tools in our information rich world. An intelligent agent consists of a software system capable of performing intelligent tasks within a dynamic and unpredictable environment. They can be characterised by various attributes including autonomous, adaptive, collaborative, communicative, mobile and reactive. Many problems are not well defined and the information needed to make decisions is not available. These problems are not easy to solve using conventional computing approaches. Here the intelligent agent paradigm may play a major role in helping to solve these problems. This book, written for application researchers, covers a broad selection of research results that demonstrate in an authoritative and clear manner the applications of agents within our information society.

Practical Issues of Intelligent Innovations Vassil Sgurev, Vladimir Jotsov, Janusz Kacprzyk, 2018-07-05 This book presents recent advances in the field of intelligent systems. Composed of fourteen selected chapters, it covers a wide range of research that varies from applications in industrial data science to those in applied science.
