SOLID Software Design Principles

| | Principle | Description |
|---|-----------------------|--|
| S | Single Responsibility | A class should have only one, a reason to change, which means it should have only one function. |
| O | Open/ Closed | Software objects should be open to extension but closed for modification. |
| L | Liskov Substitution | Objects of the same types should be replaceable with others from the same category without altering the program's function. |
| I | Interface Segregation | No client should be forced to depend on methods it does not use. The program's interfaces should always be kept smaller and separate from one another. |
| D | Dependency Inversion | High-level modules should not depend on low-level modules, but both should depend on abstractions. While abstractions should not depend on details, details should depend on abstractions. |
