Seismic Design and Qualification for Nuclear Power Plants International Atomic Energy Agency,2003 This Safety Guide provides recommendations on a generally accepted way to design a nuclear power plant so that an earthquake motion at the site will not jeopardize the safety of the plant It also gives guidance on a consistent application of methods and procedures for analysis testing and qualification of structures and equipment so that they meet

the safety requirements covering the design of nuclear power plants safety assessments for the design and the regulatory issues concerned with the licensing of plants **Reliability, Risk, and Safety, Three Volume Set** Radim Bris, Carlos Guedes Soares, Sebastián Martorell, 2009-08-20 Containing papers presented at the 18th European Safety and Reliability Conference Esrel 2009 in Prague Czech Republic September 2009 Reliability Risk and Safety Theory and Applications will be of interest for academics and professionals working in a wide range of industrial and governmental sectors including civil and environmental engineering energy production and distribution information technology and telecommunications critical infrastructures and insurance and finance **IAEA Nuclear Science Publications, Catalogue** International Atomic Energy Agency, 1980 *Modern Instrumentation and Control for Nuclear Power Plants* International Atomic Energy Agency, 1999 This report replaces Technical Reports Series No 239 Nuclear Power Plant Instrumentation and Control A Guidebook 1984 in particular by changing the emphasis from guidance to summarizing operating experience and discussing new technologies It provides an up to date overview of nuclear power plant instrumentation and control technology and the background against which such systems are implemented It is directed to meet the needs of instrumentation and control engineers but also of nuclear power plant designers and regulators **Towards Verified Systems** J. Bowen, 2013-10-22 As the complexity of embedded computer controlled systems increases the present industrial practice for their development gives cause for concern especially for safety critical applications where human lives are at stake The use of software in such systems has increased enormously in the last decade Formal methods based on firm mathematical foundations provide one means to help with reducing the risk of introducing errors during specification and development There is currently much interest in both academic and industrial circles concerning the issues involved but the techniques still need further investigation and promulgation to make their widespread use a reality This book presents results of research into techniques to aid the formal verification of mixed hardware software systems Aspects of system specification and verification from requirements down to the underlying hardware are addressed with particular regard to real time issues The work presented is largely based around the Occam programming language and Transputer microprocessor paradigm The HOL theorem prover based on higher order logic has mainly been used in the application of machine checked proofs The book describes research work undertaken on the collaborative UK DTI SERC funded Information Engineering Dictorate Safemos project The partners were Inmos Ltd Cambridge SRI the Oxford University Computing Laboratory and the University of Cambridge Computer Laboratory who investigated the problems of formally verifying embedded systems The most important results of the project are presented in the form of a series of interrelated chapters by project members and associated personnel In addition overviews of two other ventures with similar objectives are included as appendices The material in this book is intended for computing science researchers and advanced industrial practitioners interested in the application of formal methods to real time safety critical systems at all levels of abstraction from requirements to hardware In addition material of

a more general nature is presented which may be of interest to managers in charge of projects applying formal methods especially for safety critical systems and others who are considering their use *International Atomic Energy Agency Publications: Catalogue* International Atomic Energy Agency,1986 *Verification and Validation of Software Related to Nuclear Power Plant Instrumentation and Control* International Atomic Energy Agency,1999 This report provides practical guidance on the methods available for verification of the software and validation of computer based systems in nuclear power plants and on how and when these methods can be effectively applied It will be of particular interest to all those involved in the development implementation maintenance and use of software and computer based instrumentation and control systems in nuclear power plants **The Operating Organization and the Recruitment, Training and Qualification of**
