Software Process Technology Carlo Montangero,1996-09-25 Content Description Includes bibliographical references Software Process Technology Vincenzo Ambriola, 2003-06-29 This book constitutes the refereed proceedings of the 8th European Workshop on Software Process Technology EWSPT 2001 held in Witten Germany in June 2001 The 18 revised full papers presented were carefully reviewed and selected from 31 submissions Among the areas addressed are process evolution experiences mobility and distribution UML process patterns and process improvement **Process Technology** Reidar Conradi, 2000-02-09 This book constitutes the refereed proceedings of the 7th European Workshop on Software Process Technology EWSPT 2000 held in Kaprun Austria in February 2000 in conjunction with a meeting of the European ESPRIT IV Project for Process Instance Evolution PIE The 21 revised papers presented were carefully reviewed and selected from 44 submissions. The book is organized in sections on methods applications process instance evolution distributed processes and process modeling languages and industrial experience Managing Development Processes Bernhard Westfechtel, 2003-07-31 The development of products in disciplines such as mechanical electrical or software engineering is a challenging task Costs have to be reduced the ti to market has to be shortened and quality has to be improved Skilled engineers and sophisticated tools for supporting technical work are necessary prerequisites yet they are not su cientformeetingtheseambitious goals Inaddition thework of developers must be coordinated so that they cooperate smoothly To this end the steps of the development process have to be planned an engineer executing a task must be provided with documents and tools the results of development activities have to be fed back to management which in turn has to adjust the plan accordingly the documents produced in di erent working areas have to kept consistent with each other etc This book reports on models and tools for managing development processes. It provides both a survey of the current state of the art and presents our own contributions The material covered in this book is based on research in di ent engineering disciplines mechanical software and chemical engineering It presents a uni ed view on the management of development processes in Software Process Modelling and Technology Anthony Finkelstein, Jeff Kramer, Bashar these disciplines Nuseibeh, 1994-10-11 Prominent contributors identify key research problems that shed light on convincing treatments of several fundamental concerns which have characterized the field to date After introducing process centred environments the text proposes a conceptual framework for describing and evaluating evolving software processes Discusses 10 projects the authors are involved with such as EPOS MERLIN ALF ADELE TEMPO SPADE and PADM Concludes with an assessment exercise which compares and appraises these projects
Information Modelling and Knowledge Bases XVI Yasushi Kiyoki, Y. Kiyoki, Benkt Wangler, Hannu Jaakkola, Hannu Kangassalo, 2005 Modelling of information is necessary in developing information systems Information is acquired from many sources by using various methods and tools It must be recognized

conceptualized and conceptually organized efficiently so that users can easily understand and use it Modelling is needed to understand explain organize predict and reason on information It also helps to master the role and functions of components of information systems Modelling can be performed with many different purposes in mind at different levels and by using different notions and different background theories It can be made by emphasizing users conceptual understanding of information on a domain level on an algorithmic level or on representation levels. On each level the objects and structures used on them are different and different rules govern the behavior on them Therefore the notions rules theories languages and methods for modelling on different levels are also different It will be useful if we can develop theories and methodologies for modelling to be used in different situations because databases knowledge bases and repositories in knowledge management systems developed on the basis of models and used to technically store information are growing day by day In this publication the interest is focused on modelling of information and one of the central topics is modelling of time Scientific and technical papers of high quality are brought together in this book **Guide to Advanced Empirical** Software Engineering Forrest Shull, Janice Singer, Dag I. K. Sjøberg, 2007-11-21 Empirical studies have become an important part of software engineering research and practice Ten years ago it was rare to see a conference or journal article about a software development tool or process that had empirical data to back up the claims Today in contrast it is becoming more and more common that software engineering conferences and journals are not only publishing but eliciting articles that describe a study or evaluation Moreover a very successful conference International Symposium on Empirical Software Engineering and Measurement journal Empirical Software Engineering and organization International Software Engineering Research Network have all evolved in the last 10 years that focus solely on this area As a further illustration of the growth of empirical software engineering a search in the articles of 10 software engineering journals showed that the proportion of articles that used the term empirical software engineering d bled from about 6% in 1997 to about 12% in 2006 While empirical software engineering has seen such substantial growth there is not yet a reference book that describes advanced techniques for running studies and their application This book aims to fill that gap The chapters are written by some of the top international empirical software engineering researchers and focus on the practical knowledge necessary for conducting reporting and using empirical methods in software engineering The book is intended to serve as a standard reference

Feldmann, Wolfgang Müller, 2003-06-30 The importance of production and use of high quality software is still growing as more and more businesses depend on information technology Well educated highly skilled and experienced employees characterize the situation in most companies in the developed countries Increasingly they work together in temporary networks with geographically distributed offices Using and developing their knowledge is a key issue in gaining competitive advantages We have learned during recent years that the exchange and development of knowledge which we call learning demands a great deal of human interaction However it is widely recognized that information systems will in many cases enable the sharing of experience across distributed organizations and act as a knowledge repository A Learning Software Organization LSO will turn Intellectual Capital into market shares and profit as it establishes the means to manage its knowledge The LSO workshop series was created in 1999 to provide a communication forum that addresses the questions of organizational learning from a software point of view and builds upon existing work on Knowledge Management and Organizational Learning It aims at bringing together practitioners and researchers for an open exchange of experience with successes and failures in organizational learning Right from the beginning fostering interdisciplinary approaches and providing an opportunity to learn about new ideas has been a central issue of the workshop series The feedback that we have obtained in recent years has encouraged us to continue our work for a better understanding of the setup and running of **Graph Transformations and Model-Driven Engineering Gregor Engels, Claus** Learning Software Organizations Lewerentz, Wilhelm Schäfer, Andy Schürr, Bernhard Westfechtel, 2010-11-22 This festschrift volume published in honor of Manfred Nagl on the occasion of his 65th birthday contains 30 refereed contributions that cover graph transformations software architectures and reengineering embedded systems engineering and more **ACM Transactions on Software**
