Soil Science: Agricultural and Environmental Prospectives Khalid Rehman Hakeem, Javaid Akhtar, Muhammad Sabir, 2016-08-01 Soil is the most important natural non renewable resource developed over a longer period of time due to weathering of rocks and subsequently enrichment of organic matter Soil provides habitat for numerous microorganisms and serves as a natural medium for plant growth thereby providing the plants with anchorage nutrients and water to sustain the growth Soil also serves as a universal sink for all types of pollutants purifies ground water and is a major reserve of carbon in the universe The role of soils to provide ecosystem services maintenance of environmental human health and ensuring the food security makes it as the most important and basic natural resource Soil Science helps us to elaborate and understand how the soils

provide all these services Soil Science also provides us the basic knowledge dealing with the origin of the soil parent material weathering of parent material and the formation of soils morphological physico chemical and biological features of soils classification of soils and role of soils in the provision and maintenance of ecosystem services food security and environmental quality This book encompasses the various processes functions and behaviour of soils very comprehensively to acquaint the students of soil plant and environmental sciences about their role to perform different agricultural and environmental functions

Genesis and Management of Sodic (Alkali) Soils S.K. Gupta, I.C. Gupta, 2017-10-01 Land and water the two crucial natural resources for agriculture are decreasing as a result of burgeoning population of the country At the same time various forms of degradation are taking a toll on the productivity of these resources so much so that large areas have been taken out of plough Current assessment reveal that already 6.73 million ha area has gone out of cultivation because of excessive salts or high sodicity and this area is likely to expand to 20 million ha by 2050 because of the faulty irrigation and drainage water management practices being adopted in irrigation commands Of the current affected area more than 50% is sodic in nature which requires some kind of chemical amendment for reclamation While our knowledge and understanding of the causes nature and harmful effects of sodic soils have tremendously increased availability of gypsum on account of environmental problems on its mining has caused concerns Apparently there is a need to push for other amendments especially the industrial wastes and publish the information in practical terms for various stakeholders This book is an attempt in this direction Taking into account the widely varying needs of the clients the chapters of this book have been organized to include history origin and genesis of sodic lands basic principles of diagnosis nature and properties of sodic lands amendments reclamation package and alternate land management Since sodic water irrigation is one of the factors in the formation of sodic lands a separate chapter deals with this issue highlighting the extent and distribution chemical characteristic and management options for the use of sodic water The economic analysis procedures and socio economic issues of sodic land reclamation are included in a separate chapter with appropriate case studies Since latest scientific information on new technologies with case studies is included we believe that this book is an improvement over the existing books and is a useful addition to the literature on this subject In our view the information contained in this book would be handy to field practitioners in the Government Departments and NGOs to plan and undertake large sodic land reclamation projects Since the basic principles and practices have been very well elucidated the book can be used as a text book in agricultural and engineering colleges It can also be used as a source material in training programs being organized by various scientific organizations We believe that the book would prove to be a handy reference resource to all those interested in sustainable irrigated agriculture for the food and nutritional security of the nation
