**Education** ,2001-04 Principles of International Energy Transition Law Frédéric G. Sourgens, Leonardo Sempertegui, 2023-10-04 Energy transition is a complex global problem with governance and policies cutting across multiple legal silos including human rights environment international economics finance energy law of the sea and transnational commerce As of yet there is no comprehensive treatment of the legal principles governing energy transition as a whole Furthermore energy transition must solve a trilemma that pits energy equity the need to provide access to energy needed to fuel human development and energy security the need to provide resilient and reliable energy systems against environmental sustainability Without a comprehensive understanding of these issues law and policy makers risk exacerbating rather than resolving the underlying problems Principles of International Energy Transition Law introduces the energy transition problem by situating the climate emergency in its broader energy and development context showing how global energy value chains are deeply enmeshed in and drive global economic and human development It combines the different legal perspectives in one consistent analysis by outlining their interactions and showing how they can be reconciled The book discusses thirty two international legal principles governing different aspects of the energy transition trilemma s three parts

It then uses a commons governance perspective to propose a holistic approach to applying and balancing these different parts and their different legal principles Highlighted sections summarise the most important concepts and ideas for easy reference making the title particularly accessible for students and policy makers as well as law practitioners *Solar Silicon Processes* Bruno Ceccaroli,Eivind Ovrelid,Sergio Pizzini,2016-10-03 Polycrystalline silicon commonly called polysilicon is the material of choice for photovoltaic PV applications Polysilicon is the purest synthetic material on the market though its processing through gas purification and decomposition commonly called Siemens process carries high environmental risk While many current optoelectronic applications require high purity PV applications do not and therefore alternate processes and materials are being explored for PV grade silicon *Solar Silicon Processes Technologies Challenges and Opportunities* reviews current and potential future processing technologies for PV applications of solar silicon It describes alternative processes and issues of material purity cost and environmental impact It covers limits of silicon use with respect to high efficiency solar cells and challenges arising from R D activities The book also defines purity requirements and purification processes of metallurgical grade silicon MG Si and examines production of solar grade silicon by novel processes directly from MG Si and or by decomposition of silane gas in a fluidized bed reactor FBR Furthermore the book Analyzes past research and industrial development of low cost silicon processes in view of understanding future trends in this field Discusses challenges and probability of success of various solar silicon processes Covers processes that are more environmentally sensitive Describes limits of silicon use with respect to high efficiency solar cells and challenges arising from R D activities Defines purity requirements and purification processes of MG Si Examines production of solar grade silicon directly from MG Si Project Independence Blueprint: Interagency Task Force on Solar Energy.
