Story Of Writing Alphabets Hieroglyphs And Pictographs:

Story Of Writing Second Edition Andrew Robinson, 2007-04-24 In an absorbing text Andrew Robinson explains the interconnection between sound symbol and script He discusses each of the major writing systems in turn from cuneiform and Egyptian and Mayan hieroglyphs to the scripts of China and Japan as well as others such as the Cherokee alphabet and the writing of runes Full coverage is given to the history of decipherment and a provocative chapter devoted to undeciphered scripts can these codes ever be broken In this new edition of the book the author reveals the latest discoveries to have an impact on the history of writing including the Tabula Cortonensis showing Etruscan symbols and a seal from Turkmenistan that could solve the mystery of how Chinese writing evolved He also discusses how the digital revolution has not despite predictions spelled doom for the printed book In addition the table of Maya glyphs has been updated Symbols Richard Sproat, 2023-07-31 For millennia humans have used visible marks to communicate information Modern examples of conventional graphical symbols include written language and non linguistic symbol systems such as mathematical symbology or traffic signs The latter kinds of symbols convey information without reference to language This book presents the first systematic study of graphical symbol systems including a history of graphical symbols from the Paleolithic onwards a taxonomy of non linguistic systems systems that are not tied to spoken language and a survey of more than 25 such systems One important feature of many non linguistic systems is that as in written language symbols may be combined into complex messages if the information the system represents is itself complex To illustrate the author presents an in depth comparison of two systems that had very similar functions but very different structure European heraldry and Japanese kamon Writing first appeared in Mesopotamia about 5 000 years ago and is believed to have evolved from a previous non linguistic accounting system The exact mechanism is unknown but crucial was the discovery that symbols can represent the sounds of words not just the meanings The book presents a novel neurologically inspired hypothesis that writing evolved in an institutional context in which symbols were dictated thus driving an association between symbol and sound and provides a computational simulation to support this hypothesis The author further discusses some common fallacies about writing and non linguistic systems and how these relate to widely cited claims about statistical evidence for one or another system being writing The book ends with some thoughts about the future of graphical symbol systems The intended audience includes students researchers lecturers professionals and scientists from fields like Natural Language Processing Machine Learning Archaeology and Semiotics as well as general readers interested in language and or writing systems and symbol systems
