

THE SOCIAL LOGIC OF SPACE

Social Logic Of Space

Sebastian Brünink

Social Logic Of Space:

The Social Logic of Space Bill Hillier,Julienne Hanson,1989-01-27 The book presents a new theory of space how and why it is a vital component of how societies work The theory is developed on the basis of a new way of describing and analysing the kinds of spatial patterns produced by buildings and towns The methods are explained so that anyone interested in how towns or buildings are structured and how they work can make use of them The book also presents a new theory of societies and spatial systems and what it is about different types of society that leads them to adopt fundamentally different spatial forms From this general theory the outline of a pathology of modern urbanism in today s social context is developed *The Social Logic of Space* Bill Hillier,Julienne Hanson,1993 *Space and Spatial Analysis in Archaeology* University of Calgary. Archaeological Association. Conference,Elizabeth C. Robertson,2006 The archaeology of space and place is examined in this selection of papers from the 34th annual Chacmool Archaeological Conference *Space Syntax* Laura Vaughan,John Peponis,Ruth Conroy Dalton,2025-04-30 Professor Bill Hillier spent most of his career at The Bartlett University College London where he founded and developed with a team of colleagues an original research programme that set the study of architecture on a firm scientific basis His transformational way of thinking about buildings and cities influenced generations of scholars researchers and practitioners within the built environment disciplines and way beyond in fields ranging from archaeology and biology to physics and zoology *Space Syntax* Selected papers by Bill Hillier provides a canon of works that reflects the progression of Hillier s ideas from the early publications of the 1970s to his most recent work published before his death in 2019 This selection of influential works ranges from his papers on architecture as a professional and research discipline through to his later papers that present a theory of the spatial structure of the city and its social functions By bringing together writing from across his career span of half a century with specially commissioned introductions by a wide range of international experts in the field we are able to contextualise and show the range and evolution of Hillier s key ideas

Subsumption of Space Fujio Mizuoka,2024-12-21 This book takes a Marxist perspective to explore the dynamics of space By employing dialectical materialist logic it explains how a heterogeneous spatial configuration emerges through the dialectical process to transcend the contradiction generated by the subsumption incorporation of an sich pristine spaces into society with a particular focus on the context of capitalism The key concept here is subsumption as presented by Marx in *The Results of the Immediate Process of Production* This book is first of its kind that thought provokingly demonstrates the dialectical logic of the production of space through the application of Marxist logic of subsumption It succinctly argues that heterogeneous spatial configurations are produced through the society s effort to transcend these contradictions or the subsumption of space which transforms pristine space subsumed into a one point society in formal terms toward a heterogeneous spatial configuration resulting in an und f r sich produced space or space subsumed in real terms The book also suggests the role of the produced space in potential utilization of space in social struggles Based on this conceptual

framework this book discusses the built environment the space embedded in people s minds and the effects of the capitalist business cycle on space Ultimately it presents a compelling case for activists to harness the space produced in their social struggles

Historic Zuni Architecture and Society Thomas John Ferguson,1996-03 A unique approach to the Zuni Pueblo s history applying the architectural method of space syntax linking the structure of Zuni society to the structure of the architecture housing it Drawing heavily on archeological findings the volume nonetheless disputes the traditional archeological theory of population change as a basis for the changes in Zuni society but does not offer any clear theories of its own However Ferguson adjunct curator of archeology Arizona State U does create a vivid historical architectural analysis of the Zuni culture society and social and architectural structure from 1540 to the 1980s Includes numerous diagrams illustrations and photographs

Access, Property and American Urban Space M. Gordon Brown,2016-03-02 This book explains why the earliest cities had grid form street systems what conditions led to their being overwhelmingly preferred for 5000 years throughout the world why the Founding Fathers wanted gridform cities and how they affect economic transactions Real property has been instrumental in forming urban settlements for 5000 years but virtually all urban form commentary theory and research has ignored this reality The result is an incomplete and flawed understanding of cities Real property became a means of arranging spatial patterns caused by millennia of human evolutionary and historical developments with respect to access and movement As a result access to resources of all types became a regulatory mechanism controlled at least in part by real property ownership The effects of real property on urban spatial patterns are currently best seen by examining American urban space which has changed significantly over the past 200 years This change which began in the 1840s and established path dependence through a combination of design thought sentimental pastoralism and financial prowess resulted in an urban regime shift that diminished economic resilience This book offers a rethinking of how real property relates to real space examines the thought of form promoters links space property neurological evolution and settlement form shows access is measurable and describes the plusses and minuses of functionalism rent seeking general purpose technology grid form street systems and what the American Founding Fathers thought about urban form

The Sense of Space David Morris,2012-02-01 The Sense of Space brings together space and body to show that space is a plastic environment charged with meaning that reflects the distinctive character of human embodiment in the full range of its moving perceptual emotional expressive developmental and social capacities Drawing on the philosophies of Merleau Ponty and Bergson as well as contemporary psychology to develop a renewed account of the moving perceiving body the book suggests that our sense of space ultimately reflects our ethical relations to other people and to the places we inhabit

Archaeological Spatial Analysis Mark Gillings,Piraye Hacıgüzeller,Gary Lock,2020-01-16 Effective spatial analysis is an essential element of archaeological research this book is a unique guide to choosing the appropriate technique applying it correctly and understanding its implications both theoretically and practically Focusing upon the key techniques used in

archaeological spatial analysis this book provides the authoritative yet accessible methodological guide to the subject which has thus far been missing from the corpus Each chapter tackles a specific technique or application area and follows a clear and coherent structure First is a richly referenced introduction to the particular technique followed by a detailed description of the methodology then an archaeological case study to illustrate the application of the technique and conclusions that point to the implications and potential of the technique within archaeology The book is designed to function as the main textbook for archaeological spatial analysis courses at undergraduate and post graduate level while its user friendly structure makes it also suitable for self learning by archaeology students as well as researchers and professionals

Computation Works

Xavier De Kestelier, Brady Peters, 2013-04-15 Architects are now taking advantage of the computer in new ways through experimentation with algorithmic and simulation driven design Computation Works The Building of Algorithmic Thought focuses on this emerging theme in design practice showcasing built and soon to be built projects and providing a state of the art in computational design Computational design is considered to be first a design tool and second a series of instruments that can be applied in the creation of architecture It allows architects to incorporate performance analysis and knowledge about material tectonics and the parameters of production machinery Moving towards a new role as hybrid practitioners architects are taking concepts from other disciplines and customising architectural and other CAD software In addition to the discussion of built projects a further series of texts examines new custom software instruments New digital tools provide new modes of representation new methods of evaluation and new techniques for design exploration The development of new computational tools can create more responsive designs allowing architects to explore new design options and to analyse architectural decisions during the design process This issue raises important questions such as How is computation changing the way architects design Are the design tools and methods related to the result What is computational design in the context of architectural practice and How is computation changing the processes of design and construction
