Software Engineering For Parallel And Distributed Systems:

   Tools and Environments for Parallel and Distributed Systems Amr Zaky,Ted Lewis,2012-12-06 Developing correct and efficient software is far more complex for parallel and distributed systems than it is for sequential processors Some of the reasons for this added complexity are the lack of a universally acceptable parallel and distributed programming paradigm the criticality of achieving high performance and the difficulty of writing correct parallel and distributed programs These factors collectively influence the current status of parallel and distributed software development tools efforts Tools and Environments for Parallel and Distributed Systems addresses the above issues by describing working tools and environments and gives a solid overview of some of the fundamental research being done worldwide Topics covered in this collection are mainstream program development tools performance prediction tools and studies debugging tools and research and nontraditional tools Audience Suitable as a secondary text for graduate level courses in software engineering and parallel and distributed systems and as a reference for researchers and practitioners in industry   *Second International Workshop on Software Engineering for Parallel and Distributed Systems* IEEE Computer Society,1997 The proceedings from the May 1997 workshop focus on software engineering issues that are particular to the development of applications for parallel and distributed systems Papers address issues of software verification and testing software development techniques and tools software design reuse and strategic directions of future research Also included are project reports and applications The papers are intended to maximize interaction and discussion among researchers working on application of formal methods validation testing tools design methodologies and coordination architectures Includes an author index only Annotation copyrighted by Book News Inc Portland OR   **Software Engineering for Parallel and Distributed Systems** Innes Jelly,Ian Gorton,Peter Croll,2016-01-09 A wide range of modern computer applications require the performance and flexibility of parallel and distributed systems Better software support is required if the technical advances in these systems are to be fully exploited by commerce and industry This involves the provision of specialised techniques and tools as well as the integration of standard software engineering methods This book will reflect current advances in this area and will address issues of theory and practice with contributions from academia and industry It is the aim of the book to provide a focus for information on this developing which will be of use to both researchers and practitioners   *Software Engineering for Parallel and Distributed Systems* IEEE Computer Society,2000 Proceedings of a June 2000 symposium addressing issues that face software developers working with parallel and distributed systems Papers come from 10 different countries representing worldwide interest in the topic This year s meeting focuses on distributed systems development reflecting the growth in the deployment and importance of large scale distributed applications Subjects include scalability issues in CORBA formalization and verification of coherence protocols with the gamma framework a formalism for hierarchical mobile agents and a case study of exploratory visualization of distributed computations Lacks a subject index Annotation copyrighted by

Decker,Rene M. Rehmann,2013-04-17 Massively Parallel Systems MPSs with their scalable computation and storage space promises are becoming increasingly important for high performance computing The growing acceptance of MPSs in academia is clearly apparent However in industrial companies their usage remains low The programming of MPSs is still the big obstacle and solving this software problem is sometimes referred to as one of the most challenging tasks of the 1990 s The 1994 working conference on Programming Environments for Massively Parallel Systems was the latest event of the working group WG 10 3 of the International Federation for Information Processing IFIP in this field It succeeded the 1992 conference in Edinburgh on Programming Environments for Parallel Computing The research and development work discussed at the conference addresses the entire spectrum of software problems including virtual machines which are less cumbersome to program more convenient programming models advanced programming languages and especially more sophisticated programming tools but also algorithms and applications   **International Symposium on Software Engineering for Parallel and Distributed Systems** Peter Croll,Hesham El-Rewini,1999 Contains 22 papers from the May 1999 symposium The 12 regular papers discuss distributed object systems analysis testing and debugging validation of concurrent programs and applications and methods Among the titles are state based reproducible testing for CORBA applications channel dependenc   Software Engineering and Middleware Alberto Coen-Porisini,André van der Hoeck,2007-07-12 The 3rd International Workshop on Software Engineering and Middleware SEM 2002 was held May 20 21 2002 in Orlando Florida as a co located event of the 2002 International Conference on Software Engineering The workshop attracted 30 participants from academic and industrial institutions in many countries Twenty seven papers were submitted of which 15 were accepted to create a broad program covering the topics of architectures specification components and adaptations technologies and services The focus of the workshop was on short presentations with substantial dis cussions afterwards Thus we decided to include in this proceedings also a short summary of every technical session which was written by some of the partici pants at the workshop The workshop invited one keynote speaker Bobby Jadhav of CalKey who presented a talk on the design and use of model driven architecture and middle ware in industry We would like to thank all the people who helped organize and run the workshop In particular we would like to thank the program committee for their careful reviews of the submitted papers Wolfgang Emmerich for being an excellent General Chair and the participants for a
