endogenous security and safety introduces the author invented dynamic heterogeneous redundant DHR architecture with endogenous security and safety features and theoretically answers why DHR endogenous security and safety architecture can enable network resilience engineering the enabling role of DHR architecture solves the problem that network resilience cannot cope with unknown damage lacks structural gain and cannot quantify design measures This book analyses the systematic security gains that DHR architecture enabling network resilience engineering can bring in the four purpose dimensions of prevention defense recovery and adaptation gives an application example of DHR endogenous security and safety architecture enabling network resilience engineering introduces the research and exploration of endogenous security and safety theory in wireless communication security artificial intelligence security and other derivative application fields and uses rich application examples It shows that the endogenous security and safety architecture enabling network resilience engineering not only is very necessary but also has universal application significance This book is suitable for postgraduate teaching materials or reference books of related disciplines such as cybersecurity network resilience engineering confidential computing trusted computing information physical systems industrial control etc

*Software Maintenance - A Management Perspective* Phaneendra Nath Vellanky, 2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software

but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact Scientific and Technical Aerospace Reports ,1994 **Computers and Information Technologies in Agricultural Production and Management**

**Proceedings of the ... International IEEE Conference on Tools for Artificial Intelligence** ,1991 *Proceedings of the Sixth SIAM International Conference on Data Mining* Joydeep Ghosh,2006-04-01 The Sixth SIAM International Conference on Data Mining continues the tradition of presenting approaches tools and systems for data mining in fields such as science engineering industrial processes healthcare and medicine The datasets in these fields are large complex and often noisy Extracting knowledge requires the use of sophisticated high performance and principled analysis techniques and algorithms based on sound statistical foundations These techniques in turn require powerful visualization technologies implementations that must be carefully tuned for performance software systems that are usable by scientists engineers and physicians as well as researchers and infrastructures that support them *Architectures, Languages and Techniques for Concurrent Systems* World Occam and Transputer User Group. Technical Meeting,1999 During the past fifteen years concurrency in programming languages such as Java rose and fell and again became popular At this moment developers advise us to avoid concurrency in programming They are using a host of deprecated methods in the latest releases How are we to understand the love hate relationship with what should be a widely used approach of tackling real world problems The aim of *Architectures Languages and Techniques* is to encourage the safe efficient and effective use of parallel computing It is generally agreed that concurrency is found in most real applications and that it should be natural to use concurrency in programming However there has grown up a myth that concurrency is hard and only for the hardened expert The papers collected in this book cover the whole spectrum of concurrency from theoretical underpinnings to applications The message passing style of concurrency developed in the Communicating Sequential Processes CSP approach is considered and extensions are proposed CSP s realization in the programming language occam is used directly for applications as diverse as modeling of concurrent systems and the description of concurrent hardware This latter application may be compared to the use of Java for the same purpose Concurrency and the use of Java is the subject of further papers as is the provision of CSP like facilities in Java and C and techniques to use these languages to construct reliable concurrent systems At a time when

concurrency gives headaches this book brings a welcome breath of fresh air Concurrency can really be a positive way forward

**Software Quality and Software Testing in Internet Times** Dirk Meyerhoff, Begona Laibarra, Rob van der Pouw Kraan, Alan Wallet, 2011-06-28 This publication deals with two major software quality management challenges The first one involves how to deliver a software product within a competitive time frame and with a satisfying quality to the customer The second one concerns how to best deal with the growing complexity of software applications using Internet technology Due to faster development cycles the quality of an application has to be monitored during operation since the usage of the application and the technology around it might change from day to day The book compiles experiences from different industries and perspectives Its goal is to give practical insights into high tech software development projects of today

**Structured Object-Oriented Formal Language and Method** Shaoying Liu, Zhenhua Duan, Ai Liu, 2023-03-24 This book constitutes the refereed workshop proceedings of the 11th International Workshop on Structured Object Oriented Formal Language and Method SOFL MSVL 2022 held in Madrid in October 2022 The 12 revised full papers included in the volume were carefully reviewed and selected from 26 submissions They are organized in the following topical sections Model Checking Model Analysis Formal Specification Algorithms Verification

**Tools and Methods for Analysis, Debugging, and Performance Improvement of Equation-Based Models** Martin Sjölund, 2015-05-11 Equation based object oriented EOO modeling languages such as Modelica provide a convenient declarative method for describing models of cyber physical systems Because of the ease of use of EOO languages large and complex models can be built with limited effort However current state of the art tools do not provide the user with enough information when errors appear or simulation results are wrong It is of paramount importance that such tools should give the user enough information to correct errors or understand where the problems that lead to wrong simulation results are located However understanding the model translation process of an EOO compiler is a daunting task that not only requires knowledge of the numerical algorithms that the tool executes during simulation but also the complex symbolic transformations being performed As part of this work methods have been developed and explored where the EOO tool an enhanced Modelica compiler records the transformations during the translation process in order to provide better diagnostics explanations and analysis This information is used to generate better error messages during translation It is also used to provide better debugging for a simulation that produces unexpected results or where numerical methods fail Meeting deadlines is particularly important for real time applications It is usually essential to identify possible bottlenecks and either simplify the model or give hints to the compiler that enable it to generate faster code When profiling and measuring execution times of parts of the model the recorded information can also be used to find out why a particular

system model executes slowly Combined with debugging information it is possible to find out why this system of equations is slow to solve which helps understanding what can be done to simplify the model A tool with a graphical user interface has been developed to make debugging and performance profiling easier Both debugging and profiling have been combined into a single view so that performance metrics are mapped to equations which are mapped to debugging information The algorithmic part of Modelica was extended with meta modeling constructs MetaModelica for language modeling In this context a quite general approach to debugging and compilation from extended Modelica to C code was developed That makes it possible to use the same executable format for simulation executables as for compiler bootstrapping when the compiler written in MetaModelica compiles itself Finally a method and tool prototype suitable for speeding up simulations has been developed It works by partitioning the model at appropriate places and compiling a simulation executable for a suitable parallel platform
