Life Cycle Analysis and Assessment in Civil Engineering: Towards an Integrated Vision Robby Caspeele, Luc Taerwe, Dan M.

Frangopol, 2018-10-15. This volume contains the papers presented at IALCCE2018, the Sixth International Symposium on Life Cycle Civil Engineering, IALCCE2018, held in Ghent, Belgium, October 28-31, 2018. It consists of a book of extended abstracts and a USB device with full papers, including the Fazlur R. Khan lecture, 8 keynote lectures and 390 technical papers from all over the world. Contributions relate to design, inspection, assessment, maintenance or optimization in the framework of life cycle analysis of civil engineering structures and infrastructure systems. Life cycle aspects that are developed and discussed range from structural safety and durability to sustainability, serviceability, robustness and resilience. Applications relate to buildings, bridges and viaducts, highways and runways, tunnels and underground structures, off-shore and marine structures, dams and hydraulic structures, prefabricated design, infrastructure systems, etc. During the IALCCE2018 conference, a particular focus is put on the cross-fertilization between different sub-areas of expertise and the development of an overall vision for life cycle analysis in civil engineering. The aim of the editors is to provide a valuable source of cutting-edge information for anyone interested in life cycle analysis and assessment in civil engineering, including researchers, practising engineers, consultants, contractors, decision makers and representatives from local authorities. **History of Computing in Education** J.A.N. Lee, John Impagliazzo, 2006-04-11. This work derives from a conference discussing the history of computing in education. This conference is the first of hopefully a series of conferences that will take place within the International Federation for Information Processing (IFIP) and hence we describe it as the First Conference on the History of Computing in Education (HCE1). These proceedings represent a collection of works presented at the HCE1 Conference held in association with the IFIP 2004 World Computer Congress held in Toulouse, France. Contributions to this volume range from a wide variety of educational perspectives and represent activities from four continents. The HCE1 conference represents a joint effort of the IFIP Working Group 9.7 on the History of Computing and the IFIP Technical Committee 3 on Education. The HCE1 Conference brings to light a broad spectrum of issues and spans four continents. It illustrates topics in computing education as they occurred in the early days of computing, whose ramifications or overtones remain with us today. Indeed, many of the early challenges remain part of our educational tapestry; most likely, many will evolve into future challenges. Therefore, this work provides additional value to the reader as it will reflect in part the future development of computing in education to stimulate new ideas and models in educational development. *Software Process Improvement and Capability Determination* Tanja Woronowicz, Terry Rout, Rory V. world environments a task which is the focus of empirical software engineering One of the leading protagonists of this discipline worldwide is Prof Dr h c Dieter Rombach who dedicated his entire career to empirical software engineering For his many important contributions to the field he has received numerous awards and recognitions including the U S National Science Foundation s Presidential Young Investigator Award and the Cross of the Order of Merit of the Federal Republic of Germany He is a Fellow of both the ACM and the IEEE Computer Society This book published in honor of his 60th birthday is dedicated to Dieter Rombach and his contributions to software engineering in general as well as to empirical software engineering in particular This book presents invited contributions from a number of the most internationally renowned software engineering researchers like Victor Basili Barry Boehm Manfred Broy Carlo Ghezzi Michael Jackson Leon Osterweil and of course by Dieter Rombach himself Several key experts from the Fraunhofer IESE the institute founded and led by Dieter Rombach also contributed to the book The contributions summarize some of the most important trends in software engineering today and outline a vision for the future of the field The book is structured into three main parts The first part focuses on the classical foundations of software engineering such as notations architecture and processes while the second addresses empirical software engineering in particular as the core field of Dieter Rombach s contributions Finally the third part discusses a broad vision for the future of software engineering

Computer-based Problem Solving Process Teodor Rus,2015-03-19 One side effect of having made great leaps in computing over the last few decades is the resulting over abundance in software tools created to solve the diverse problems Problem solving with computers has in consequence become more demanding instead of focusing on the problem when conceptualizing strategies to solve them users are side tracked by the pursuit of even more programming tools as available Computer Based Problem Solving Process is a work intended to offer a systematic treatment to the theory and practice of designing implementing and using software tools during the problem solving process This method is obtained by enabling computer systems to be more Intuitive with human logic rather than machine logic Instead of software dedicated to computer experts the author advocates an approach dedicated to computer users in general This approach does not require users to have an advanced computer education though it does advocate a deeper education of the computer user in his or her problem domain logic This book is intended for system software teachers designers and

implementers of various aspects of system software as well as readers who have made computers a part of their day today problem solving

The Patentability of Software Anton Hughes, 2019-02-18 This book explores the question of whether software should be patented It analyses the ways in which the courts of the US the EU and Australia have attempted to deal with the problems surrounding the patentability of software and describes why it is that the software patent issue should be dealt with as a patentable subject matter issue rather than as an issue of novelty or nonobviousness Anton Hughes demonstrates that the current approach has failed and that a fresh approach to the software patent problem is needed The book goes on to argue against the patentability of software based on its close relationship to mathematics Drawing on historical and philosophical accounts of mathematics in pursuit of a better understanding of its nature and focusing the debate on the conditions necessary for mathematical advancement the author puts forward an analytical framework centred around the concept of the useful arts This analysis both explains mathematics and therefore software s nonpatentability and offers a theory of patentable subject matter consistent with Australian American and European patent law
