Software Engineering for Embedded Systems Srinivasa

Addepalli, 2013-04-01. Embedded networking applications are changing and evolving quickly. Embedded multicore technology, for example, is appearing not only in high end networking applications but even in mid and low end networking applications. Achieving networking performance is only possible if software takes advantage of multiple cores. Multicore programming is not as simple as single core programming. A new mindset is required from architecting, designing to coding. Networking application development in multicore SoCs should not only concentrate on achieving scalable performance but should also

ease development and result in software that is maintainable for a long time Some of the programming techniques listed in this chapter should help in achieving this goal
