

# The 'BOOTSTRAP' approach

- Main goal is to provide an advanced process assessment in order to get an organization to another level
- to identify process strengths and weaknesses
- to support the achievement of the organization's goals by planning improvement actions
- Focus on Software Producing Unit (SPU), small and medium size software companies or software departments within a large organization

Software Process Assessment and Improvement Pasi Kuvaja, 1994      Action Focused Assessment for Software Process Improvement Tim Kasse, 2002 This informative book is designed to help professionals involved with development of software or systems manage process improvement initiatives within their company by explaining the history method and psychology behind AFA      *Software Process Improvement and Capability Determination* Antonia Mas, Antoni Mesquida, Terry Rout, Rory V. O'Connor, Alec Dorling, 2012-06-02 This book constitutes the refereed proceedings of the 12th International Conference on Software Process Improvement and Capability Determination SPICE 2012 held in Palma de Mallorca Spain in May 2012 The 21 revised full papers presented and 14 short papers were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on organizational process improvement SPI in small and very small enterprises process models SPI in automotive software and security SPI in medical and safety critical systems short papers      **Product Focused Software Process Improvement** Markku Oivo, Seija Komi-Sirviö, 2003-07-01 On behalf of the PROFES organizing committee we would like to welcome you to the 4th International Conference on Product Focused Software Process Improvement PROFES 2002 in Rovaniemi Finland The conference was held on the Arctic Circle in exotic Lapland under the Northern Lights just before Christmas time when Kaamos the polar night is known in Finnish as Kaamos shows its best characteristics PROFES has established itself as one of the recognized international process improvement conferences Despite the current economic downturn PROFES has attracted a record number of submissions A total of 70 full papers were submitted and the program committee had a difficult task in selecting the best papers to be presented at the conference The main theme of PROFES is professional software process improvement SPI motivated by product and service quality needs SPI is facilitated by software process assessment software measurement process modeling and technology transfer It has become a practical tool for quality software engineering and management The conference addresses both the solutions found in practice and the relevant research results from academia      Software Engineering Processes Yingxu Wang, Graham King, 2000-04-21 Software engineering is playing an increasingly significant role in computing and informatics necessitated by the complexities inherent in large scale software development To deal with these difficulties the conventional life cycle approaches to software engineering are now giving way to the process system approach encompassing development methods infrastructure organization and management Until now however no book fully addressed process based software engineering or set forth a fundamental theory and framework of software engineering processes *Software Engineering Processes Principles and Applications* does just that Within a unified framework this book presents a comparative analysis of current process models and formally describes their algorithms It systematically enables comparison between current models avoidance of ambiguity in application and simplification of manipulation for practitioners The authors address a broad range of topics within process based software engineering and the fundamental theories and philosophies behind them They

develop a software engineering process reference model SEPRM to show how to solve the problems of different process domains orientations structures taxonomies and methods They derive a set of process benchmarks based on a series of international surveys that support validation of the SEPRM model Based on their SEPRM model and the unified process theory they demonstrate that current process models can be integrated and their assessment results can be transformed between each other Software development is no longer just a black art or laboratory activity It is an industrialized process that requires the skills not just of programmers but of organization and project managers and quality assurance specialists Software Engineering Processes Principles and Applications is the key to understanding using and improving upon effective engineering procedures for software development *Software Process: Principles, Methodology, and Technology*

Jean-Claude Derniame,Badara A. Kaba,David Wastell,2006-08-18 1 Jean Claude Derniame Software process technology is an emerging and strategic area that has already reached a reasonable degree of maturity delivering products and significant industrial experiences This technology aims at supporting the software production process by providing the means to model analyse improve measure and whenever it is reasonable and convenient to automate software production activities In recent years this technology has proved to be effective in the support of many business activities not directly related to software production but relying heavily on the concept of process i e all the applications traditionally associated with workflow management This book concentrates on the core technology of software processes its principles and concepts as well as the technical aspect of software process support The contributions to this book are the collective work of the Promoter 2 European Working Group This grouping of 13 academic and 3 industrial partners is the successor of Promoter a working group responsible for creating a European software process community Promoter 2 aims at exploiting this emerging community to collectively develop remaining open issues to coordinate activities and to assist in the dissemination of results The title Software Process Modelling and Technology Fink94 was produced during Promoter 1 Being project based it presented the main findings and proposals of the different projects then being undertaken by the partners **Software**

**History of Nordic Computing** Janis Bubenko, John Impagliazzo, Arne Soelvig, 2005-01-14 Computing in the Nordic countries started in late 1940s mainly as an engineering activity to build computing devices to perform mathematical calculations and assist mathematicians and engineers in scientific problem solving The early computers of the Nordic countries emerged during the 1950s and had names like BARK BESK DASK SMIL SARA ESKO and NUSSE Each of them became a nucleus in institutes and centres for mathematical computations programmed and used by highly qualified professionals However one should not forget the punched card machine technology at this time that had existed for several decades In addition we have a Nordic name namely Frederik Rosing Bull contributing to the fundamentals of punched card technology and forming the French company Bull Commercial products such as FACIT EDB and SAAB D20 series computers in Sweden the Danish GIER computer the Nokia MIKKO computer in Finland as well as the computers of Norsk Data in Norway followed the early computers In many cases however companies and institutions did not further develop or exploit Nordic computing hardware even though it exhibited technical advantages Consequently in the 1970s US computers primarily from IBM flooded the Nordic market
