Eggleton, 2001-08-30 Providing fundamental discussion of regolith properties and chemistry, this book considers many landscape situations and features whilst linking process to position, geochemistry and time. Presenting information from an Australian perspective, it provides new insights into the subject which are developed away from the yoke of traditional Northern Hemisphere ideas and concepts. Presents a new approach to the problems of understanding regolith geology and landscapes. Presents the general aspects and principles of regolith. Chapters present views on landscapes and their evolution, the nature of minerals, the behaviour of water at a landscape level and the exploration of water behaviour at various scales in regolith materials. Investigates methods of conveying information about regolith via maps and in GIS packages. *Minerals* Hans-Rudolf Wenk, Andrey Bulakh, 2016-10-27 Designed for use on one or two semester courses, this is a comprehensive study of modern mineralogy for undergraduate and graduate students in the fields of geology, materials science and environmental science. New online resources include laboratory exercises and PowerPoint slides making this a sound investment for the next generation of mineralogists. **Landslides** John J. Clague, Douglas Stead, 2012-08-23 Landslides have geological causes but can be triggered by natural processes: rainfall, snowmelt, erosion and

earthquakes or by human actions such as agriculture and construction Research aimed at better understanding slope stability and failure has accelerated in recent years accompanied by basic field research and numerical modeling of slope failure processes mechanisms of debris movement and landslide causes and triggers Written by seventy five world leading researchers and practitioners this book provides a state of the art summary of landslide science It features both field geology and engineering approaches as well as modeling of slope failure and run out using a variety of numerical codes It is illustrated with international case studies integrating geological geotechnical and remote sensing studies and includes recent slope investigations in North America Europe and Asia This is an essential reference for researchers and graduate students in geomorphology engineering geology geotechnical engineering and geophysics as well as professionals in natural hazard analysis
