Gerrard,1992-10-31 Soil geomorphology is the accurate assessment of the genetic relationship of soils and landforms which is possible only if their interdependence is recognized This book provides an integration of geomorphology and pedology Students and scientists in many disciplines should find this book highly relevant to their interests **A Place Against Time** Paul Sillitoe,2013-10-31 A Place Against Time is an ethnographically focused environmental study of Montane New Guinea where people were among the world s first to cultivate crops some ten millennia ago and where today an enduring agricultural condition continues It arranges its account of climate vegetation topography and geology according to their relationship with the soils of the region occupied by Wola speakers in the Southern Highlands Province of Papua New Guinea in the Western Pacific This book breaks new intellectual ground as an ethno environmental investigation with a soils perspective ethno pedology being a little researched topic to date *Native Woodlands of Scotland* Scott Wilson,2015-04-26 This book presents up to date information about Scotland s native woodlands It draws upon professional experience of scientific research survey and management where the author has

studied many important native woodlands in Scotland and beyond

**Introduction to World Vegetation** P.E.

Collinson, 2012-12-06 A textbook 1st ed 1978 presenting a wide range of information for students of ecology geography and biogeography

**Soil Geography of the USA** James G. Bockheim, 2014-07-10 Since 1980 our understanding of the factors and processes governing the distribution of soils on the Earth's surface has increased dramatically as have the techniques for studying soil patterns. The approach used in this book relies on the National Resources Conservation Service databases to delineate the distribution of each of the eight diagnostic epipedons and 19 subsurface horizons to identify the taxonomic level at which each of these horizons is used to develop an understanding of the role of the factors and processes in their formation and to summarize our latest understanding of their genesis. A chapter is devoted to each diagnostic horizon or combined horizons. This book is intended to serve as a textbook in soil geography, a reference book for geographers, ecologists and geologists, and a tool for soil instructors, landlookers, mappers, classifiers and information technologists.

Encyclopedia of Ecology and Environmental Management, 2009-07-15 The Encyclopedia of Ecology and Environmental Management addresses the core definitions and issues in pure and applied ecology. It is neither a short entry dictionary nor a long entry encyclopedia but lies somewhere in between. The mixture of short entry definitions and long entry essays gives a comprehensive and up to date alphabetical guide to over 3000 topics and allows any subject to be accessed to varying levels of detail while the longer entries provide general reviews of subjects, the short definitions provide specific details on more specialised areas. An important feature of the Encyclopedia which sets it apart from other similar works is the comprehensive cross referencing. The most comprehensive and up to date reference work in pure and applied ecology. Definitions cover the entire spectrum of pure and applied ecological research. Distinguished editorial board: Dr Peter Moore, Professor John Grace, Professor Bryan Shorrocks, Professor Steven Stearns, Professor Don Falk. International team of distinguished authors over 200 contributors from 20 countries. 3000 headwords defined. Over 250 long entries review major topics. Heavily illustrated with a section of colour plates. Complete one volume guide to pure and applied ecology. Presents cutting edge definitions in emerging fields as well as grounding in well established areas of ecology.

*Biogeochemistry of Forested Catchments in a Changing Environment* Egbert Matzner, 2013-06-29 Forest ecosystems represent a major type of land use in Germany and in Europe. They provide a number of functions or ecosystem services beneficial to humans, namely biomass production, regulation of the water and energy cycle, C and N sequestration, erosion control, recreation, and they act as habitat for numerous species. The stability of forest ecosystems in Europe as influenced by the deposition of air pollutants has been a matter of debate for more than 20 years. Besides atmospheric deposition, other environmental conditions affecting forest ecosystems such as temperature, CO<sub>2</sub> content of the atmosphere, and precipitation have significantly changed in the past and continue to change in the future. Quantifying and predicting the effects of these changes on ecosystem functioning are a challenge to ecosystem research and also a requirement to establish sustainable use of forest ecosystems in the future. This

book summarizes results of long term interdisciplinary ecosystem research conducted in two forested catchments and coordinated at the Bayreuth Institute of Terrestrial Ecosystem Research BIT K University of Bayreuth Germany It does not aim to summarize all the research of BIT K in the past decade which would go far beyond the studies in these two catchments Instead we concentrate here on the long term developments in the biogeochemistry of carbon and mineral elements and on the water cycle at both the plot and the catchment scale
