**Solar Cell Array Design Handbook** Hans S.

Rauschenbach, 2012-12-06      *Solar Energy Update*, 1983      **Photovoltaic and Photoelectrochemical Solar Energy Conversion**

F. Cardon, 2012-12-06 In recent years there has been an increasing interest in systems which enable the conversion of solar energy into electrical chemical energy. Many types of systems have been proposed and studied experimentally; the fundamentals of which extend from solid state physics to photo and electrochemistry. For most of the systems considered, excitation of an electron by absorption of a photon is followed by charge separation at an interface. It follows that the different fields involved: photovoltaics, photoelectrochemistry, photogalvanics, etc. have several essential aspects in common. It was the main purpose with the NATO Advanced Study Institute held at Gent, Belgium, from August 25 to September 5, 1980, to bring together research workers specializing in one of these fields in order to enable them not only to extend their knowledge into their own field but also to promote the interdisciplinary exchange of ideas. The scope of the ASI has been limited to systems which have not or have hardly reached the stage of practical development. As a consequence, no lectures on economical aspects of solar energy conversion have been included. The topics covered in this volume are the fundamentals of recombination in solar cells; P. Landsberg; theoretical and experimental aspects of heterojunctions and semiconductor-metal Schottky barriers; J. J. Loferski, W. H. Bloss, and W. G. Townsend; photoelectrochemical cells; H. Gerischer and A. J. Nozik; photovoltaic prefabricated cells; W. J. Albery; and finally surfactant assemblies; M. Grätzel.
