The Solar System Charles Lane Poor,1908 International Catalogue of Scientific Literature ,1912 *International Catalogue of Scientific Literature, 1901-1914* ,1912 Solar System Exploration ,2006 **Origin of Elements in the Solar System** Oliver K. Manuel,2007-05-08 Based on an American Chemical Society Symposium organized by Professors Glenn Seaborg and Oliver Manuel this volume provides a comprehensive record of different views on this important subject at the end of the 20th century They have assembled a blend of highly respected experimentalists and theorists from astronomy geology meteoritics planetology and nuclear chemistry and physics to discuss the origin of elements in the solar system The intent was to include all points of view and let history judge their validity **Strategy for the Detection and Study of Other Planetary Systems and Extrasolar Planetary Materials** National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Planetary and Lunar Exploration,1990-02-01 This volume addresses a new opportunity in the planetary sciences to extend our exploration outward to discover and study planetary systems that may have formed or are forming around other stars It concludes that a coordinated program of astronomical observation laboratory research theoretical development and understanding of the dynamics and origins of whatever may be found would be a technologically feasible and potentially richly rewarding extension of the study of bodies within the solar system **A Classified Catalogue of Manuscripts** Wesley, William, & son, London,1910 **A List of Books in the Reading Room, 1909** John Crerar Library,1909 **Planets Outside the Solar System: Theory and Observations** Jean-Marie Mariotti,D.M. Alloin,2012-12-06 The question of the existence of other worlds and other living beings has been present in the human quest for knowledge since as far as Epicurus For centuries this question belonged to the fields of philosophy and theology The theoretical problem of the formation of the Solar System and hence of other planetary systems was tackled only during the 18th century while the first observational attempts for a detection started less than one hundred years ago Direct observation of an extra solar planetary system is an extraordinarily difficult problem extra solar planets are at huge distances are incredibly faint and are overwhelmed by the bright light of their own stars With virtually no observational insight to test their models theoreticians have remained for decades in a difficult position to make substantial progress Yet the field of stellar formation has provided since the 1980s both the the oretical and observational evidences for the formation of discs at the stage of star birth and for debris materials orbiting the very young stellar systems It was tempting to consider that these left overs might indeed later agglomerate into planetary systems more or less similar to ours Then came observational evidences for planets outside the Solar System **Book Review Digest** ,1908 **Energy Research Abstracts** ,1990 Knowledge... Edwin Sharpe Grew,Baden Fletcher Smyth Baden-Powell,Arthur Cowper Ranyard,Wilfred Mark Webb,1909 **Scientific and Technical Aerospace Reports** ,1995-08 Encyclopedia of Astronomy & Astrophysics P Murdin,2001-01-01 In a unique collaboration Nature Publishing Group and Institute of Physics

Publishing have published the most extensive and comprehensive reference work in astronomy and astrophysics This unique resource covers the entire field of astronomy and astrophysics and this online version includes the full text of over 2 750 articles plus sophisticated search and retrieval functionality and links to the primary literature The Encyclopaedia's authority is assured by editorial and advisory boards drawn from the world's foremost astronomers and astrophysicists This first class resource is an essential source of information for undergraduates graduate students researchers and seasoned professionals as well as for committed amateurs librarians and lay people wishing to consult the definitive astronomy and astrophysics reference work

Priorities in Space Science Enabled by Nuclear Power and Propulsion National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee on Priorities for Space Science Enabled by Nuclear Power and Propulsion, 2006-04-20 In 2003 NASA began an R D effort to develop nuclear power and propulsion systems for solar system exploration This activity renamed Project Prometheus in 2004 was initiated because of the inherent limitations in photovoltaic and chemical propulsion systems in reaching many solar system objectives To help determine appropriate missions for a nuclear power and propulsion capability NASA asked the NRC for an independent assessment of potentially highly meritorious missions that may be enabled if space nuclear systems became operational This report provides a series of space science objectives and missions that could be so enabled in the period beyond 2015 in the areas of astronomy and astrophysics solar system exploration and solar and space physics It is based on but does not reprioritize the findings of previous NRC decadal surveys in those three areas

The John Crerar, 1909 *Science with Large Millimetre Arrays* Peter Shaver, 2013-06-29 The next major step in millimetre astronomy and one of the highest priority items in radio astronomy today is a large millimetre array with a collecting area of up to 10 000 m² A project of this scale will almost certainly require international collaboration at least within Europe and possibly with other major partners elsewhere In order to establish a focal point for this project within Europe a study has been undertaken by the Institut de Radio Astronomie Millimétrique IRAM the European Southern Observatory ESO The Onsala Space Observatory OSO and The Netherlands Foundation for Research in Astronomy NFRA In the context of this project a workshop attended by some 100 participants was held at ESO Garching on December 11-13 1995 to discuss the scientific advances such an array will make possible Throughout the three days of the workshop the strong enthusiasm for the concept of a large millimetre array in the southern hemisphere the Large Southern Array or LSA was obvious and it became clear that such a facility would have a profound impact on almost all areas of observational astrophysics It was particularly clear that since their main science drivers cosmology and the origins of galaxies stars and planets are the same and their angular resolutions and sensitivities similar the LSA and the VLT would strongly complement each other

Treatise on Geophysics, 2015-04-17 *Treatise on Geophysics* Second Edition is a comprehensive and in depth study of the physics of the Earth beyond what any geophysics text has provided previously Thoroughly revised and updated it provides fundamental and state of the
