Hyde, 2018-10-25 In the near future Earth is depleted of natural resources but peace reigns over the planet Director of Space Research Joseph Samuels has an important task as he explores the universe After so many years of silence Earth's radio telescopes detect an intelligent signal from a small vessel heading towards our solar system It's a miraculous scientific breakthrough but the signal also begs the question is Earth in danger from outside invaders To develop a plan of action Joseph meets with experts in religion defense and science The plan is set Earth will send two astronauts in an unarmed shuttle to intercept the incoming vessel Luckily the mysterious space probe locks onto the astronauts radio signal and makes a connection A robot named Interface contacts the Earth shuttle and explains he has been programmed to be peaceful but nothing is certain in this brave new world With information from Interface the astronauts return to Earth and meet with Joseph The science gleaned from Interface could change everything we ever believed about space and our place in it With alien life no longer a theory but a fact what will Joseph do with this new information and what long ranging consequences might his actions set in motion

Local Interstellar Medium Rudolf von Steiger,R. Lallement,M.A. Lee,2012-12-06 In summary we can conclude that the contributions of the different ionization processes to the total ionization rate for the most abundant interstellar species are basically known The ionization of the noble gases He and Ne is almost completely dominated by photoionization whereas for H charge exchange with the solar wind is most important For other species such as O and Ar both processes contribute significantly Electron impact ionization can typically contribute by 10% to the total rate in the inner Solar System Because direct measurements of the solar EUV flux are not yet continuously available the variation of the ionization rate over the solar cycle still contains a relatively large uncertainty The recent measurements of pickup ion distributions and of the neutral helium gas provide an independent tool to determine the total ionization rate that can be used to cross calibrate with the results obtained for the individual ionization processes Acknowledgements The authors are grateful to M Allen for supplying us with new data on photoionization cross sections compiled by him We thank also M Gruntman for drawing our attention to and support in collecting the most recent data on charge exchange cross sections D R was supported by grant No 2 P03C 004 09 from the Committee for Scientific Research Poland This work was also supported in part through NASA contract NAS7 918 NSF Grant INT 911637 NASA Grant NAGW 2579 Commerce, Justice, Science, and Related Agencies Appropriations for 2018 United States.
