**Advancing Business Concepts in a JAD Workshop Setting** Anthony Crawford, 1998      **Nanofabrication Techniques**, 2023-12-20 Nanofabrication is the process of assembling structures at the nanoscale with unique properties This book describes proficient low cost and robust nanofabrication techniques to produce nanostructures It presents information on nanofabrication technology principles methodologies equipment and processes as well as discusses the fabrication of new structures for new applications The nanofabrication techniques reviewed are applicable to different engineering processes nano electromechanical systems biosensors nanomaterials photonic crystals devices and new structures This book is a useful resource for students and professionals including engineers scientists researchers technicians and technology managers      An Introduction To The Method Of Fundamental Solutions Alexander H-d Cheng, Ching-shyang Chen, Andreas Karageorghis, 2025-03-11 Over the past two decades the method of fundamental solutions MFS has attracted great attention and has been used extensively for the solution of scientific and engineering problems The MFS is a boundary meshless collocation method which has evolved from the boundary element method In it the approximate solution is expressed as a linear combination of fundamental solutions of the operator in the governing partial differential equation One of the main attractions of the MFS is the simplicity with which it can be applied to the solution of boundary value problems in complex geometries in two and three dimensions The method is also known by many different names in the literature such as the charge simulation method the de singularization method the virtual boundary element method etc Despite its effectiveness the original version of the MFS is confined to solving boundary value problems governed by homogeneous partial differential equations To address this limitation we introduce various types of particular solutions to extend the method to solving general inhomogeneous boundary value problems employing the method of particular solutions This book consists of two parts Part I aims to provide theoretical support for beginners In the spirit of reproducible research and to facilitate the understanding of the method and its implementation several MATLAB codes have been included in Part II This book is highly recommended for use by post graduate researchers and graduate students in scientific computing and engineering      Reducing Process Costs with Lean, Six Sigma, and Value Engineering Techniques Kim H. Pries, Jon M. Quigley, 2012-12-13 A company with effective cost reduction activities in place will be better positioned to adapt to shifting economic conditions In fact it can make the difference between organizations that thrive and those that simply survive during times of economic uncertainty Reducing Process Costs with Lean Six Sigma and Value Engineering Techniques covers

Slope Stability and Erosion Control: Ecotechnological Solutions Joanne E. Norris,Alexia Stokes,Slobodan B. Mickovski,Erik Cammeraat,Rens van Beek,Bruce C. Nicoll,Alexis Achim,2008-02-29 This chapter describes the processes involved in the transport of material over hillslopes Hillslopes provide the gradients enabling material to be transported from the slopes themselves towards the valley bottoms directly by gravity alone or by water flowing down over the surface Gravity has the potential to transfer material downslope if the material resistance to counteact it is insufficient Similarly water and wind flowing along the surface exert a drag on soil particles and have the potential to entrain material After the gradient has fallen below a critical threshold to keep the material in tra port deposition occurs Conventionally slope processes in which gravity alone is the dominant transporting agent are called mass movements Brunsden 1984 Processes in which other agents dominate are called erosion e g wind or water erosion Flowing water is an important transporting agent on which the emphasis is placed here Although mass wasting is a natural process its incidence and impact may be exacerbated by human activities Crozier 1986 Morgan 2005 A situation may ultimately arise in which human interests become unsafe or unsustainable This impact is not only directly felt in the areas where material is removed or deposited and indirectly mass wasting may have an effect on soil and water quality in areas located further downstream In the following sections a brief overview is given of the mechanisms morphology causes and consequences of mass movements and erosion
