Story Of Cosmic Rays:

The Story of Cosmic Rays William Francis Gray Swann, 1955 **Early History of Cosmic Ray Studies** Yataro Sekido, Harry Elliot, 2012-12-06 On the occasion of the International Conference on Cosmic Rays held in Kyoto in August 1979 five aged members of the cosmic ray fraternity H Elliot V L Ginzburg B Peters Y Sekido and J A Simpson met together as a dinner party devoted to the enjoyment of Japanese cuisine and reminiscences of our younger days This pleasant occasion called to of our own age as well as some eminent seniors not present at the mind the many friends conference whose recollections would have further enriched and enlivened our evening By the time the dinner came to an end we had agreed that the compilation of a more extensive collection of personal reminiscences would be an interesting and worthwhile undertaking Accordingly the next day we held an editorial meeting to draw up a list of potential authors and two of us the present editors started work on the project In putting the book together our intention has been to try to capture and record through these personal accounts something of the atmosphere the excitement and the frustrations of research in cosmic rays as experienced at first hand by some of the practitioners in the field It has never been our intention that it should comprise a systematic history of the subject Neither unfortunately can it be a fully representative collection since practical limits to the size of the volume alone would preclude that The Story of Cosmic Rays Germaine Beiser, Arthur Beiser, 1962 *The Story of Cosmic Rays* W. F. G. Swann, 1957 **Story of Cosmic Rays** William Francis Gray Swann, 1957 **Celestial Messengers** Mario Bertolotti, 2012-10-14 The book describes from a historical point of view how cosmic rays were discovered The book describes the research in cosmic rays The main focus is on how the knowledge was gained describing the main experiments and the conclusions drawn Biographical sketches of main researchers are provided Cosmic rays have an official date of discovery which is linked to the famous balloon flights of the Austrian physicist Hess in 1912 The year 2012 can therefore be considered the centenary of the discovery A Thin Cosmic Rain Michael W. Friedlander, 2002-11-30 Enigmatic for many years cosmic rays are now known to be not rays at all but particles the nuclei of atoms raining down continually on the earth where they can be detected throughout the atmosphere and sometimes even thousands of feet underground This book tells the long running detective story behind the discovery and study of cosmic rays a story that stretches from the early days of subatomic particle physics in the 1890s to the frontiers of high energy astrophysics today Writing for the amateur scientist and the educated general reader Michael Friedlander a cosmic ray researcher relates the history of cosmic ray science from its accidental discovery to its present status He explains how cosmic rays are identified and how their energies are measured then surveys current knowledge and theories of thin cosmic rain The most thorough up to date and readable account of these intriguing phenomena his book makes us party to the search into the nature behavior and origins of cosmic rays and into the sources of their enormous energy sometimes hundreds of millions times greater than the energy achievable in the most powerful earthbound particle accelerators As this search led unexpectedly to the discovery

of new particles such as the muon pion kaon and hyperon and as it reveals scenes of awesome violence in the cosmos and offers clues about black holes supernovas neutron stars quasars and neutrinos we see clearly why cosmic rays remain central to an astonishingly diverse range of research studies on scales infinitesimally small and large Attractively illustrated engagingly written this is a fascinating inside look at a science at the center of our understanding of our universe **The Story of Cosmic Rays** Philip J. Gensler,1961 **The Supernova Story** Laurence A. Marschall,2021-02-09 Astronomers believe that a supernova is a massive explosion signaling the death of a star causing a cosmic recycling of the chemical elements and leaving behind a pulsar black hole or nothing at all In an engaging story of the life cycles of stars Laurence Marschall tells how early astronomers identified supernovae and how later scientists came to their current understanding piecing together observations and historical accounts to form a theory which was tested by intensive study of SN 1987A the brightest supernova since 1006 He has revised and updated The Supernova Story to include all the latest developments concerning SN 1987A which astronomers still watch for possible aftershocks as well as SN 1993J the spectacular new event in the cosmic laboratory *From Our Galaxy to Beyond: The Story of Cosmic Rays* Sanjay,2024-06-11
