Advances in Help-Seeking Research and Applications Stuart A. Karabenick, Minna Puustinen, 2013-06-01 Research on help seeking has primarily focused on classrooms interactions that consist primarily of students asking teachers and peers for help The rapid emergence of information and communications technologies and interactive learning environments however requires expanding the help seeking landscape and rethinking such critical theoretical issues as the distinction between help seeking and information search and whether help seeking is inevitably a social self regulated learning strategy There is also the need to focus attention on help seeking in the broader learning enterprise which includes its role in the collaboration process how to support adaptive rather than the over or under reliance on help seeking as well as to scaffold help seeking skills that render the process more efficient and useful To examine these and other issues the present volume assembled contributions from internationally recognized scholars and researchers to capture the state of the art and to anticipate future developments in this expanding field Its relevance extends to anyone attempting to understand the role of technology in education including educational researchers and teachers who do now or who expect to use technology to support instruction and the rapidly expanding numbers of those developing new technological applications

Support in Education Chrysta Pelissier, 2020-09-10 This book aims to reflect the contours of the notion of aid as it is questioned by current scientific research This notion appears as fuzzy in its scope of intervention in its methods of multidisciplinary and multi referential approaches in theoretical frameworks convened Present in different areas that we propose to investigate in the book training and teaching at university inclusion in education but also prevention the fight against failure in orientation the notion of help questions research in SHS and Computer Science It comes in

different formats labeled help but also support support or guidance In order to take stock of these notions and to question their differences we convoke several authors French and foreign who participate by their research action underlining components and environmental factors of the device that give this notion any its thickness

Active Teaching and Learning Strategies Rock Moore,Michelle A. Moore,2004 Active Teaching and Active Learning Strategies Creating a Blueprint for Success is the cumulative result of a year of reflecting asking and listening to questions and comments that many have concerning the education of our youth The book s genesis however started many years ago as the state of California along with many other states embraced a standards based accountability system This accountability has now been coupled with the recent addition of The No Child Left Behind Legislation In a real sense we are entering both the best and worst of times I say this because of the effects of high stakes testing and the requirement that all students reach high levels of proficiency which admittedly are very lofty goals For this to be realized changes will be required in teaching and assessment as well as a more concentrated focus on student learning The instructional design introduced in this book advocates four components academic social collaborative contextual and cognitive developmental These components work in tandem with Active Teaching and Learning Strategies Combined they form a student responsive instructional methodology which optimizes student success and academic achievement We wanted to create a book that demonstrated to those of us in the field of education the value of looking at academic standards with data about our students and reflecting on how this information should influence our choices concerning instructional practices and our perceptions about the students that we are entrusted with The focus of this endeavor is to see all students achieve and succeed and to keep passion and compassion at the heart of all that we do It is the premise of this book that the difference between effective and outstanding teachers are that outstanding teachers care know how to utilize data practice active teaching strategies and promote the active learning of students Together these characteristics became the design and course of action that Created a Blueprint for Success
