United States. Congressional-Executive Commission on China,2006 China's Foreign Trade Policy Ka Zeng,2007-08-07

This book explores the sectoral regional bureaucratic and transnational forces shaping China s foreign trade policy as the country makes a transition from the era of bilateralism to engage the rules of the World Trade Organization Law and the Market Economy in China Perry Keller,2017-07-05 This volume concerns several aspects of China s changing market based economy These include commercial contract enforcement corporate structures competition law and other issues related to China s membership in the WTO In the past two decades the rapid integration of China s economy into the global marketplace has created obligations and expectations of non discrimination and regulatory transparency in domestic markets The Chinese government has responded by demanding better governance within major companies market sectors and public administration generally However as the articles in this volume show it has struggled to find a corporate structure capable of absorbing external equity investment and participation but still amenable to direct and indirect state guidance It has also moved cautiously in creating legal controls over unfair competition Moreover the protection of state owned enterprises which serve as vehicles for domestic economic social and political policy has been a recurring issue in China s WTO trade disputes

THE STATE AND CAPITAL IN CHINA Renildo Souza,2021-12-16 The State and Capital in China offers a critical interpretation of Chinese recent history scrutinizing the political and economic turnaround post 1978 It analyzes the dynamics of the party state system the de collectivization of agriculture the liberalization of the labor market the rise of private sector the crucial role of the global market the new social exploitation and the prospects for China In the near future it will no longer be possible to maintain current gigantic investment levels that feed its high economic growth Global competition technological dispute and the downward pressure of overaccumulation on the rate of profit are all significant limits to Chinese current economic model The immense inequalities in income and wealth have been fuelling protest and worker strikes while environmental damage limits natural resources availability The problems of Chinese capitalism discussed in this book have been exacerbated by the new cold war unleashed by the United States Building on the theory of uneven and combined development this book assesses the Chinese development refusing the economism often present in

appraisals of this theme Worker struggles and progressive forces can benefit from this research on the nature and implications of the transformations in the world's second largest economy and a new superpower *Effective Environmental Regulation in China* Federico Pasini, 2021-06-16 Though recently improved Chinese legislation on environmental permits is still weak and urgent measures are needed to help the country in moving towards an effective permitting system This book examines this legislation gap and presents a contribution to solving China's pollution problems By analysing the deficiencies of current Chinese provisions on permitting in light of EU legislation and its Italian application the book determines which permitting legislative structure and approach China should embrace in practice in order to build more comprehensive legislation on emission permitting It is argued that a set of ad hoc legislative measures should be implemented so as to strengthen China's environmental protection and efficiently tackle pollution The book will be a valuable resource for researchers academics and policy makers working in the areas of international environmental law and comparative law

From Technology Transfer to Technology Management in China Theodor Leuenberger, 2012-12-06 Access to science and technology worldwide is achieved by active participation in open international scientific research as well as through technological capability that is decisive in catching up with world developments in science and technology In other words it is the national system of innovation which determines a country's assimilation capacity The universities research institutions the technological infrastructure industrial training schemes information networks and technical institutions in general provide the foundation for a solid steady development Therefore policies directed toward strengthening the national system of innovation are essential for a catching up strategy But even more important is the presence of skilled and experienced people with the necessary connections to the scientific and technological infrastructure of the world at large this applies to China in particular Whether or not the technological potential will be developed depends on the technological and industrial strategies promoted by the Chinese leadership In addition the costs and benefits of technological development are affected by the prevalent evolutionary stage of a country's political framework and fiscal regime There must be a strong coordination between overall economic policies and technology policy A successful management of technology is only possible through a technological package including management financial and marketing skills

Guanxi and Local Green Development in China Chunhong Sheng, 2019-06-19 This book examines the factors which contribute to local green development in China and employs political ecology to analyze the relationship between power and the environment Specifically it looks at which actors control access to resources and are therefore able to promote environmental progress Following the reform and opening up of China in the 1970s entrepreneurs

and local officials profited economically and politically and formed close relationships known as guanxi in China. As a result, they have also been criticized as those responsible for the associated ecological damage. This book does not contest this association but instead argues that the current literature places too much emphasis on their negative influence and the positive influence of their environmental work has been neglected. Building on three case studies where local green development is being pursued (Shanghai Pudong New Area, Baoding and Wuning), this book shows how local officials and entrepreneurs can also be the crusaders of a greener environment at the local level in China. This book will be of great interest to students and scholars of Chinese studies with a particular interest in environmental policy and politics, business and society, as well as those interested in sustainable development more broadly.

How to Do Business in China Michael Yih-chung Shen, 2004. The China market is increasingly important for multinational companies. However, it is also extremely tough and challenging. In this invaluable guidebook, Dr. Michael Shen shares his intensive in-the-field experience addressing China's business and cultural environment: how to get up and run China operations, how to grow the China market, and even how to manage traveling and living in China.

Energy and Environmental Policy in China ZhongXiang Zhang, 2011. This pioneering book provides a comprehensive, rigorous and in-depth analysis of China's energy and environmental policy for the transition towards a low carbon economy. This unique book focuses on concrete, constructive and realistic solutions to China's unprecedented environmental pollution and rising greenhouse gas emissions from burning fossil fuels and energy security as a result of steeply rising oil imports. It provides an up-to-date factual analysis of China's efforts and commitments to improve energy efficiency, to cut pollutants, and to increase the use of renewable energy to create a low carbon economy. The author explores many of the policies and measures that China has put in place to save energy and reduce emissions, as well as examines new policies and measures in order for China to be successful. *Energy and Environmental Policy in China* will prove to be of great value to practitioners and policymakers, as well as to academics and students in the areas of economics, environmental studies, Asian studies, regional and urban studies, law, political science, and sociology.

Urban Transformation in China Gordon G. Liu, 2017-03-02. This book provides a general description and evaluation of the process of urbanization in China and the urgent challenges facing the Chinese government. *Urban Transformation in China* examines the changing pattern of China's urban population and the determinants of these changes, including an analysis of the spatial structures of China's cities and industry, and an assessment of urban productivity growth and the role of mega-cities in national development. The book's coverage encompasses both academic and policy perspectives. With its sister volume *Urbanization and Social Welfare in China*, it provides a comprehensive and multidisciplinary overview of the country's urbanization process.
