Stereoregular Polymers and Stereospecific Polymerizations Giulio Natta, Ferdinando Danusso, 2013-10-22

Stereoregular Polymers and Stereospecific Polymerizations The Contributions of Giulio Natta and his School to Polymer Chemistry Volume 1 covers the developments in understanding the reactions nomenclature and physico chemical properties of polymers This volume is composed of 82 chapters and starts with surveys of the synthesis and crystal structure of polymers Significant chapters are devoted to the characterization of crystalline polymers with emphasis on the determination of their viscosity and molecular weight Other chapters deal with stereospecific polymers of olefins mechanism of stereospecific catalysis reaction kinetics This volume also considers the polymerization of synthetic elastomers and the copolymerization of olefins as well as their reaction kinetics The remaining chapters describe the X ray characterization of isotactic polymers This book is directed toward polymer chemists *Stereoregular Polymers and Stereospecific*

Polymerizations, 1967 Stereoregular polymers and stereospecific polymerizations : the contrib. of Giulio Natta and his school to polymer chemistry. 1, 1967 **Chemistry & Physics of Carbon** Walker, 1975-09-01 This book provides a

comprehensive and critical overview of carbon materials in terms of molecular structure intermolecular relationships bulk and surface properties and their behavior in current and emerging applications It also presents advances in carbon research and development **Preparation and Properties of Stereoregular Polymers** R.W. book contains the texts of the main lectures presented at the NATO Advanced Studies Institute on Advances in Preparation and Properties of Stereoregular Polymers held at Tirrenia near Pisa Italy from October 3 to 14 1978 A few contributed papers have also been included because they were concerned with topics not included in the main lectures The primary objective of the Institute was to assist in the further development of stereoregular polymers because of the ever increasing demand for new products with exceptional chemical and physical properties This need has reawakened interest in the field Indeed there is now a rapidly increasing activity in the study of stereoregular polymerization and the preparation of structurally ordered polymers with the aim of achieving appreciable improvements in existing polymeric materials through new developments in synthesis and properties as well as in discovering new polymeric structures In order to achieve these objectives a broad interdisciplinary cooperation among scientists involved in investigations on the design synthesis characterization and application of stereoregular or structurally ordered polymers will be necessary Stereospecific Polymerization and

regular series Polypropylene and other Polyolefins S. van der Ven, 2012-12-02 This book deals with polyolefins prepared via Ziegler Natta catalysis from a polymer chemist's viewpoint i.e. with emphasis on their preparation and on their basic composition and properties In addition to chapters on catalysts polymerization behaviour and polymer properties such as tacticity crystallinity morphology etc a chapter is also devoted to characterization methods The main part of this work is reserved for polypropylene in all its forms namely homopolymer random copolymer and toughened block copolymers for which extensive own experience was present The other polyolefins are also covered by means of a thorough literature review This book is intended for scientists active in the field of polyolefins including catalyst development but should also prove an invaluable medium in academia to illustrate the growth of understanding in catalysis kinetics and characterization of a commercially very important class of polymers *Surface and Interfacial Aspects of Biomedical Polymers* J.D.

Andrade, 2012-12-06 This book is intended to provide a fundamental basis for the study of the interaction of polymers with living systems biochemicals and with aqueous solutions The surface chemistry and physics of polymeric materials is a subject not normally covered to any significant extent in classical surface chemistry textbooks Many of the assumptions of classical surface chemistry are invalid when applied to polymer surfaces Surface properties of polymers are important in the development of medical devices and diagnostic products Surface properties are also of vital importance in fields such as adhesion paints and coatings polymer filler interactions heterogeneous catalysis composites and polymers for energy generation The book begins with a chapter considering the current sources of information on polymer surface chemistry and physics It moves on to consider the question of the dynamics of polymer surfaces and the implications of polymer surface dynamics on all subsequent characterization and interfacial studies Two chapters are directed toward the question of model polymers for preparing model surfaces and interfaces Complete treatments of X ray photoelectron spectroscopy and attenuated total reflection infrared spectroscopy are given There is a detailed treatment of the contact angle with particular emphasis on contact angle hysteresis in aqueous systems followed by chapters on interfacial electrochemistry and interface acid base charge transfer properties The very difficult problem of block and graft copolymer surfaces is also discussed The problem of theoretical calculations of surface and interfacial tensions is presented Raman spectroscopy is considered as an analytical technique for polymer surface characterization *Thermal Field-Flow Fractionation of Polymers* Guillaume

Greyling, Harald Pasch, 2019-02-21 This book introduces the reader to thermal field flow fractionation and discusses its advantages over the fundamental problems associated with traditional column based analytical techniques commonly used to characterize polymers and macromolecules The authors discuss the theoretical background equipment experimental procedures as well as the recent advances and applications of thermal field flow fractionation Complete with several practical examples and troubleshooting guidelines the book is written for beginners and experienced separation scientists alike and will enable its readers to optimize their experimental conditions for their specific separation needs and problems

Models of Biopolymers By Ring-Opening Polymerization Stanislaw Penczek, 2018-01-18 There are a number of methods used to synthetically prepare biopolymers their models and bioanalogous polymers This work approaches the syntheses of the three major groups of biopolymers existing in nature polypeptides polysaccharides and nucleic and teichoic acids by ring opening polymerization Until now this method has never been reviewed uniformly for these three groups The majority of models prepared by ring opening polymerization can not reach the complexity of the actual biological molecules However a better understanding of these biopolymers will aid in the use of such molecules in several fields of application in research and other high technologies where they mimic functions of related biopolymers in living organisms Topics in Stereochemistry, Volume 25 Scott E.
