

Stereoselectivity in organic synthesis

- **Stereospecific reactions** - a reaction where the mechanism means the stereochemistry of the starting material determines the stereochemistry of the product; **there is no choice!** e.g. S_N2 reactions
- **Stereoselective reactions** - a reaction where one stereoisomer of a product is formed **preferentially** over another. The mechanism does not prevent the formation of two or more stereoisomers but **one predominates**.
- **Diastereoselective reactions** - a stereogenic centre is introduced into a molecule in such a way that diastereoisomers are produced in unequal amounts

- **Enantioselective reactions** - a reaction that produces two enantiomers of a product in unequal amounts
