A Field Guide to the Birds of China John Ramsay MacKinnon, Karen Phillipps, 2000-06-08 China

is one of the largest countries in the world covering 7% of the earth's land surface and encompassing a hugely diverse range of habitats. As a result it boasts a rich and diverse avifauna including some of the most spectacular and fascinating birds to be found anywhere in the world. This is the first truly comprehensive taxonomically modern and fully illustrated field guide to the Chinese birds. Over 1300 species are illustrated in 128 colour paintings and fully described in the text. Colour distribution maps are provided for all illustrated species. The authors have both lived and worked in the region for many years and have extensive experience of writing and illustrating bird guides. This important book will be a landmark in field guide publishing.

The Nature Handbook Ernest H. Williams Jr., 2005-05-19 Nature is full of fascinating stories that attract our attention at a young age and keep us amazed throughout our entire lives. The need to understand nature draws us back to its simple beauty again and again yet underneath this simplicity lies a complex web of associations and patterns. The Nature Handbook does what no other field guide does: explores and explains nature through these connecting patterns, revealing them to the many different types of nature lovers. All naturalists, from birders to gardeners, hikers to environmentalists, wildflower enthusiasts to butterflyers, will appreciate the different approach of the Handbook; even those whose interest in the natural world is just beginning to develop. Naturalists who are already well versed in one group of organisms, birders for example, will find new explanations and patterns for their favorite group as well as new patterns all around them that they had previously overlooked. Observations in the Handbook are arranged in the three main sections of plants, animals, and habitats. These sections are then connected through discussions of the relationship of size and shape, adaptations, distribution, patterns, behavior, and diversity of life. Since the emphasis is on patterns rather than individual species, each chapter has cross references to related topics. For example, tree-related topics such as leaf shape, treelines, and fall colors are all discussed in different chapters, even though they are related. Leaf shape is associated with trees as organisms and therefore is in Chapter 2. Trees, treelines, are most associated with mountains, so their description is in Chapter 8. Mountains, fall colors, apply more broadly to forests than to individual trees and they are discussed in Chapter 9. Forests. Approximately 500 color photographs help make the more than 200 patterns apparent and recognizable for readers, and each pattern is accompanied by a detailed description and a brief list of sources. The book is designed to invite browsing, and readers will gain a rich ecological perspective and insight. Curiosity about the world around us is a basis for human learning. The Nature Handbook serves to aid all nature lovers in their quest for understanding the many stories that our living world provides. **Birder's Handbook**
