Stellar Number Three:

Meridian Observations for Stellar Parallax ... Albert Stowell Flint, 1902 *An Investigation of Atmospheric Turbulence by Stellar Observations* Jack Lytle Bufton, 1971 This study of the optical effects of atmospheric turbulence concentrates on the stellar observation problem When an infinite plane wave from an incoherent stellar source is sampled by an earth based telescope the resultant stellar image exhibits random fluctuations in intensity position and size due to turbulence induced scattering in the intervening atmosphere One familiar aspect of this problem is the scintillation of starlight apparent to the naked eye The central aim is to express optical statistics in terms of refractive index structure constant which pertains to strength of turbulence along the optical path Data is presented on stellar and meteorological observations made between fall 1968 and spring 1969 with a 0.152 meter diameter refracting telescope Data was recorded simultaneously on the three parameters of image intensity motion and size The data is interpreted in terms of the theory and used to estimate strength of turbulence The central result is a series of profiles for refractive index structure constant along the vertical path These are constructed using stellar data to calculate parameters of a model **Researches in Stellar Photometry During the Years 1894 to 1906** John Adelbert Parkhurst, 1906 **The Realm of Interacting Binary Stars** J. Sahade, G.E. McCluskey, Y. Kondo, 2012-12-06 More than two centuries have elapsed since the story of the interacting binary stars began with the rediscovery of the variability of Algol by John Goodricke and the interpretation he proposed for explaining the regular periodic brightness variations which he found Over this long span of time our knowledge about these systems has been growing and we have now reached a fairly good understanding of the structure and behavior of this interesting group of objects This book contains a timely summary of our present knowledge of interacting binary stars The chapters have been written by distinguished scientists who have done relevant research in the field of interacting binary stars **An Analytical Approach to the Determination of Stellar Fields of View** Louis A. Kleiman, Raymond A. Arehart, United States. National Aeronautics and Space Administration, 1967 This paper describes a scheme to determine the size of the circular field of view that is both necessary and sufficient to include at least some specified number n of stars from a given set independent of the orientation of the field within the celestial sphere A geometrical proof of the scheme is presented and all equations needed to effect the scheme are derived The scheme is thus shown to be entirely analytical and to involve no assumptions concerning the distribution of the stars Numerical results are presented in which the 1064 stars brighter than or equal in brightness to an apparent visual magnitude of 4.7 are considered The size and location of the necessary fields of view are tabulated as a function of limiting star brightness for $n = 1, 2$ and $n = 3$ Finally the meaning and importance of the data are discussed and related to star sensor technology Theoretical Astrophysics: Volume 3, Galaxies and Cosmology T. Padmanabhan, 2000 This timely volume provides comprehensive coverage of all aspects of cosmology and extragalactic astronomy at an advanced level Beginning with an overview of the key observational results and necessary

terminology it covers important topics the theory of galactic structure and galactic dynamics structure formation cosmic microwave background radiation formation of luminous galaxies in the universe intergalactic medium and active galactic nuclei This self contained text has a modular structure and contains over one hundred worked exercises It can be used alone or in conjunction with the previous two accompanying volumes Volume I Astrophysical Processes and Volume II Stars and Stellar Systems

Star Clusters B.W. Carney,W.E. Harris,2006-04-18 Star clusters are at the heart of astronomy being key objects for our understanding of stellar evolution and galactic structure Observations with the Hubble Space Telescope and other modern equipment have revealed fascinating new facts about these galactic building blocks This book provides two comprehensive and up to date pedagogically designed reviews on star clusters by two well known experts in the field Bruce Carney presents our current knowledge of the relative and absolute ages of globular clusters and the chemical history of our Galaxy Bill Harris addresses globular clusters in external galaxies and their use as tracers of galaxy formation and cosmic distance indicators The book is written for graduate students as well as professionals in astronomy and astrophysics

The Stellar Populations of Galaxies B. Barbuy, Alvio Renzini, 2012-12-06 One approach to learning about stellar populations is to study them at three different levels of resolution First in our own Galaxy secondly from nearby galaxies where stars can still be resolved and thirdly in remote galaxies in which the stellar population can only be studied in integrated light This IAU Symposium covered the entire range of galaxies in its study of their stellar populations Interspersed with theoretical papers the wealth of observational results provides an important state of the art presentation of the progress that has been made in this field **Bridling Chaos** Lee Killough, 1998 **Atlas of Astronomy** Alexander Keith Johnston, 1869 **School Atlas of Astronomy** Alexander Keith Johnston, 1877
