Cinematic Virtual Reality Kath Dooley, 2021-04-27 With reference to traditional film theory and frameworks drawn from fields such as screenwriting studies and anthropology, this book explores the challenges and opportunities for both practitioners and viewers offered by the 360-degree storytelling form. It focuses on cinematic virtual reality (CVR), a format that involves immersive, high-quality live-action or computer-generated imagery (CGI) that can be viewed through head-mounted display (HMD) goggles or via online platforms such as YouTube. This format has surged in popularity in recent years due to the release of affordable, high-quality omnidirectional 360-degree cameras and consumer-grade HMDs. The book interrogates four key concepts for this emerging medium: immersion, presence, embodiment, and proximity, through an analysis of innovative case studies and with reference to practitioner interviews. In doing so, it highlights the specificity of the format and provides a critical account of practitioner approaches to the concept development, writing, and realisation of short narrative CVR works. The book concludes with an account of the author's practice-led research into the form, providing a valuable example of creative practice in the field of immersive media.
