Training Behaviour Therapists (Psychology Revivals)

Derek Milne, 2015-03-27 Originally published in 1986 one of the major developments in behavioural psychotherapy and mental health in the previous decade had been the growing involvement of non psychologists in behaviour therapy This was a result of the fact that there were too few psychologists to cope with problem behaviour and that other professionals or carers began to appreciate more clearly their potential as agents of behaviour change Foremost among these mediators of therapy were parents nurses particularly psychiatric nurses and teachers especially remedial teachers Their involvement had greatly increased the efficiency of behaviour therapy at the time and opened up a new era in applied psychology It also entailed the development of new training formats evaluation procedures and implementation strategies The main aim of this book was to provide a summary of the research relevant to these issues and to offer practical guidelines to those who were interested in training or being trained as behaviour therapists For this reason there are chapters by researchers who have been involved in training parents nurses and teachers These chapters provide a detailed account of training in a form that was rarely available in published form at the time and even today should be of great assistance to readers

Clinical Behavior Therapy with Children Thomas H.

Ollendick, Jerome A. Cerny, 2013-03-08 As noted by its title the focus of this book is centered on an examination of behavior therapy with children in clinical settings Throughout our goal has been to examine theoretical underpinnings review empirical research and illustrate clinical utility for a variety of behavioral procedures with children In pursuing this goal we have described child behavior therapy as an approach based on empirical methodology derived from behavioral principles and focused upon adjustment disorders of children The hallmark of such an approach is its accountability the extent to which the procedures and techniques presented in this text are demonstrably accountable must be determined at least partially by the reader As students of child behavior we have become sensitized to two trends in behavior therapy with children during the preparation of this book First we have been concerned with the simple application of behavioral procedures to children irrespective of developmental considerations All too frequently assessment strategies and treatment procedures found to be useful with adults have been applied to children in an indiscriminate fashion For example some recent studies have examined and assessed the very same social skill deficits in children as in adults e g lack of eye contact delayed latency of response and absence of positive commendatory responses Surely skill deficits differ from age to age just as they differ from situation to situation

Working with Parents Roy McConkey, 2025-08-05 In the 1980s working with

parents in the education and care of their children was more often preached than practised by professionals. However, recent government committees and legislation both in the UK and USA at the time had repeatedly stressed the importance of parental participation. This applied not only to children with special needs but to all children and indeed there was considerable evidence to suggest that parents wanted to be involved and that the child benefited as a result. Originally published in 1985, *Working with Parents* aimed at professionals in training or newly qualified drew together for the first time many examples of how partnership with parents can evolve and be successful. It not only gives detailed suggestions for working with parents on a one to one basis but also describes how to handle parent groups, organise courses, give effective talks and use video. The author draws on his wide and well known experience to give specific instances such as his work on language with children with learning disabilities that illustrate general principles. The book is written in a lively practical style and should still be of great value to teachers in both special and mainstream education and others such as speech therapists, psychologists and community workers. This book is a re issue originally published in 1985. The language used is a reflection of its era and no offence is meant by the Publishers to any reader by this re publication.

The Education and Training of the Mentally Retarded Adrian F. Ashman, Ronald S. Laura, 2018-09-03. First published in 1985. The field of mental handicap is a broad one encompassing the interests of many professional groups. As a result there is a need periodically to present wide ranging reviews of advances in the field. This is the central aim of this volume. Two chapters focus on the cognitive domain and are especially pertinent in view of the recent release of the new Kaufman Assessment Battery for Children which uses Das's theoretical position as its foundation. Another contribution reviews the area of non speech communication with those with special needs a subject of much current interest and controversy. Other chapters focus on major issues such as maladaptive behaviour and deinstitutionalization and use of new technology. The book is thus likely to be relevant to all those with an interest in advances in mental handicap research.
