Stimulus Class Formation In Humans And Animals:

Stimulus Class Formation in Humans and Animals T.R. Zentall, P.M. Smeets, 1996-10-24 Stimulus class formation has been studied independently by two groups of researchers. One group has come out of a learning theory approach while the second has developed out of a behavior analytic tradition. The purpose of the present volume is to further establish the ties between these two research areas while allowing for differences in approach to the questions asked. The book is loosely organized around four themes. The first two sections deal with what constitutes functional and equivalence classes in animals and humans. In the third section the authors attempt to identify stimulus control variables that contribute to the formation of equivalence classes. The last section deals with the complex issue of the role of verbal behavior in equivalence classes. The goal of the book is to provide the reader with a better understanding of the current state of research and theory in stimulus class formation. It is also hoped that it will stimulate research into how and under what conditions stimulus classes can form.

Primate Origins of Human Cognition and Behavior Tetsuro Matsuzawa, 2009-03-12 Biologists and anthropologists in Japan have played a crucial role in the development of primatology as a scientific discipline. Publication of *Primate Origins of Human Cognition and Behavior* under the editorship of Tetsuro Matsuzawa reaffirms the pervasive and creative role played by the intellectual descendants of Kinji Imanishi and Junichiro Itani in the fields of behavioral ecology, psychology, and cognitive science. Matsuzawa and his colleagues, humans and other primate partners, explore a broad range of issues including the phylogeny of perception and cognition, the origin of human speech, learning and memory, recognition of self, others, and species, society and social interaction, and culture. With data from field and laboratory studies of more than 90 primate species and of more than 50 years of long term research, the intellectual breadth represented in this volume makes it a major contribution to comparative cognitive science and to current views on the origin of the mind and behavior of humans.

Relational Frame Theory Steven C. Hayes, Dermot Barnes-Holmes, Bryan Roche, 2005-11-30 This volume goes beyond theory and gives the empirical and conceptual tools to conduct an experimental analysis of virtually every substantive topic in human language and cognition, both basic and applied. It challenges behavioral psychology to abandon many of the specific theoretical formulations of its most prominent historical leader in the domain of complex human behavior, especially in human language and cognition, and approach the field from a new direction. It will be of interest to behavior theorists, cognitive psychologists, therapists, and educators.

Derived Relational Responding Applications for Learners with Autism and Other Developmental Disabilities Ruth Anne Rehfeldt, Yvonne Barnes-Holmes, 2009-04-02 Copublished with Context Press, *Derived Relational Responding* offers a series of revolutionary intervention programs for applied work in human language and cognition targeted at students with autism and other developmental disabilities. It presents a program drawn from derived stimulus relations that you can use to help students of all ages acquire foundational and advanced verbal, social, and cognitive skills. The first part of *Derived Relational Responding* provides step by step instructions for helping

students learn relationally acquire rudimentary verbal operants and develop other basic language skills In the second section of this book you ll find ways to enhance students receptive and expressive repertoires by developing their ability to read spell construct sentences and use grammar Finally you ll find out how to teach students to apply the skills they ve learned to higher order cognitive and social functions including perspective taking empathy mathematical reasoning intelligence and creativity This applied behavior analytic training approach will help students make many substantial and lasting gains in language and cognition not possible with traditional interventions

A Scientific Framework for Compassion and Social Justice Jacob A. Sadavoy,Michelle L. Zube,2021-07-21 A Scientific Framework for Compassion and Social Justice provides readers with an in depth understanding of the behavior analytic principles that maintain social justice issues and highlights behavior analytic principles that promote self awareness and compassion Expanding on the goals of the field of applied behavioral analysis ABA this collection of essays from subject matter experts in various fields combines personal experiences scientific explanations and effective strategies to promote a better existence a better world Chapters investigate the self imposed barriers that contribute to human suffering and offer scientific explanations as to how the environment can systematically be shaped and generate a sociocultural system that promotes harmony equality fulfilment and love The goal of this text is to help the reader focus overwhelming feelings of confusion and upheaval into action and to make a stand for social justice while mobilizing others to take value based actions The lifelong benefit of these essays extends beyond ABA practitioners to readers in gender studies diversity studies education public health and other mental health fields

The Alex Studies Irene M. PEPPERBERG, Irene M Pepperberg, 2009-06-30 Can a parrot understand complex concepts and mean what it says Since the early 1900s most studies on animal human communication have focused on great apes and a few cetacean species Birds were rarely used in similar studies on the grounds that they were merely talented mimics that they were after all birdbrains Experiments performed primarily on pigeons in Skinner boxes demonstrated capacities inferior to those of mammals these results were thought to reflect the capacities of all birds despite evidence suggesting that species such as jays crows and parrots might be capable of more impressive cognitive feats Twenty years ago Irene Pepperberg set out to discover whether the results of the pigeon studies necessarily meant that other birds particularly the large brained highly social parrots were incapable of mastering complex cognitive concepts and the rudiments of referential speech Her investigation and the bird at its center a male Grey parrot named Alex have since become almost as well known as their primate equivalents and no less a subject of fierce debate in the field of animal cognition This book represents the long awaited synthesis of the studies constituting one of the landmark experiments in modern comparative psychology

Biocommunication of Animals Guenther Witzany, 2013-11-08 Every coordination within or between animals depends on communication processes Although the signaling molecules vocal and tactile signs gestures and its combinations differ throughout all species according their evolutionary origins and variety of adaptation processes certain levels of biocommunication can be found in all animal species a Abiotic environmental indices such as temperature light water etc that affect the local ecosphere of an organism and are sensed interpreted b Trans specific communication with non related organisms c Species specific communication between same or related species d Intraorganismic communication i e sign mediated coordination within the body of the organism This book gives an overview of the manifold levels of animal communication exemplified by a variety of species and thereby broadens the understanding of these organisms

The Routledge Companion to Consumer Behavior Analysis Gordon Foxall, 2015-08-20 The Routledge Companion to Consumer Behavior Analysis provides a unique and eclectic combination of behavioral cognitive and environmental perspectives to illuminate the real world complexities of consumer choice in a marketing oriented economy Edited by a leading authority in the field the contributing authors have created a unique anthology for understanding consumer preference by bringing together the very latest research and thinking in consumer behavior analysis This comprehensive and innovative volume ranges over a broad multi disciplinary perspective from economic psychology behavioral psychology and experimental economics but its chief focus is on the critical evaluation of consumer choice in the natural settings of affluent marketing oriented economies By focussing on human economic and social choices which involve social exchange it explores and reveals the enormous potential of consumer behavior analysis to illuminate the role of modern marketing oriented business organizations in shaping and responding to consumer choice This will be of particular interest to academics researchers and advanced students in marketing consumer behavior behavior analysis social psychology behavioral

economics and behavioral psychology **The Evolution of Cognition** Cecilia M. Heyes, Ludwig Huber, 2000 In the last decade evolutionary psychology has come to refer exclusively to research on human mentality and behavior motivated by a nativist interpretation of how evolution operates This book encompasses the behavior and mentality of nonhuman as well as human animals and a full range of evolutionary approaches Rather than a collection by and for the like minded it is a debate about how evolutionary processes have shaped cognition The debate is divided into five sections Orientations on the phylogenetic ecological and psychological comparative approaches to the evolution of cognition Categorization on how various animals parse their environments how they represent objects and events and the relations among them Causality on whether and in what ways nonhuman animals represent cause and effect relationships Consciousness on whether it makes sense to talk about the evolution of consciousness and whether the phenomenon can be investigated empirically in nonhuman animals and Culture on the cognitive requirements for nongenetic transmission of information and the evolutionary consequences of such cultural exchange Contributors Bernard Balleine Patrick Bateson Michael J Beran M E Bitterman Robert Boyd Nicola Clayton Juan Delius Anthony Dickinson Robin Dunbar D P Griffiths Bernd Heinrich Cecilia Heyes William A Hillix Ludwig Huber Nicholas Humphrey Masako Jitsumori Louis Lefebvre Nicholas Mackintosh Euan M Macphail Peter Richerson Duane M Rumbaugh Sara Shettleworth Martina Siemann Kim Sterelny Michael Tomasello Laura Weiser Alexandra Wells Carolyn Wilczynski David Sloan Wilson *Clinical Behavior Analysis* Michael Dougher, 2000-04-01 Clinical behavior analysis uses verbally based interventions to treat a range of psychological problems in an outpatient context This volume offers a collection of current research in this rapidly expanding field with a special focus on acceptance issues in therapy and the importance of the therapeutic relationship Learning As Self-organization Karl H. Pribram, Joseph S. King, 2013-06-17 A year before his death B F Skinner wrote that There are two unavoidable gaps in any behavioral account one between the stimulating action of the environment and the response of the organism and one between consequences and the resulting change in behavior Only brain science can fill those gaps In doing so it completes the account it does not give a different account of the same thing This declaration ended the epoch of radical behaviorism to the extent that it was based on the doctrine of the empty organism the doctrine that a behavioral science must be constructed purely on its own level of investigation However Skinner was not completely correct in his assessment Brain science on its own can no more fill the gaps than can single level behavioral science It is the relation between data and formulations developed in the brain and the behavioral sciences that is needed This volume is the result of The Fourth Appalachian Conference on Behavioral Neurodynamics the first three of which were aimed at filling Skinner s first gap Taking the series in a new direction the aim of the fourth and subsequent conferences is to explore the second of the gaps in the behavioral account noted by Skinner The aim of this conference was to explore the aphorism The motivation for learning is self organization In keeping with this aim and in the spirit of previous events this conference s mission was to acquaint scientists working in one discipline with the

work going on in other disciplines that is relevant to both. As a result it brought together those who are making advances on the behavioral level mainly working in the tradition of operant conditioning and those working with brains mainly amygdala hippocampus and far frontal cortex. *Handbook of Behaviorism* William O'Donohue, Richard Kitchener, 1998-10-21

Handbook of Behaviorism provides a comprehensive single source that summarizes what behaviorism is how the various flavors of behaviorism have differed between major theorists both in psychology and philosophy and what aspects of those theories have been borne out in research findings and continue to be of use in understanding human behavior. The Oxford Handbook of Comparative Evolutionary Psychology Jennifer Vonk, Todd K. Shackelford, 2012-02-13

This volume brings together leading experts in comparative and evolutionary psychology. Top scholars summarize the histories and possible futures of their disciplines and the contribution of each to illuminating the evolutionary forces that give rise to unique abilities in distantly and closely related species. *Associative Learning and Conditioning Theory* Todd R Schachtman PhD, Steve S Reilly PhD, 2011-06-03

Although many professionals in psychology including the sub disciplines of human learning and memory clinical practice related to psychopathology neuroscience educational psychology and many other areas no longer receive training in learning and conditioning the influence of this field remains strong. Therefore many researchers and clinicians have little knowledge about basic learning theory and its current applications beyond their own specific research topic. The primary purpose of the present volume is to highlight ways in which basic learning principles methodology and phenomena underpin and indeed guide contemporary translational research. With contributions from a distinguished collection of internationally renowned scholars this 23 chapter volume contains specific research issues but is also broad in scope covering a variety of topics in which associative learning and conditioning theory apply such as drug abuse and addiction anxiety fear and pain research advertising attribution processes acquisition of likes and dislikes social learning psychoneuroimmunology and psychopathology e.g. autism depression helplessness and schizophrenia. This breadth is captured in the titles of the three major sections of the book: Applications to Clinical Pathology Applications to Health and Addiction Applications to Cognition Social Interaction and Motivation. The critically important phenomena and methodology of learning and conditioning continue to have a profound influence on theory and clinical concerns related to the mechanisms of memory cognition education and pathology of emotional and consummatory disorders. This volume is expected to have the unique quality of serving the interests of many researchers educators and clinicians including for example neuroscientists learning and conditioning researchers psychopharmacologists clinical psychopathologists and practitioners in the medical field. *Autism Service Delivery* Florence D. DiGennaro Reed, Derek D. Reed, 2015-09-09

This volume examines ways in which service delivery to individuals with autism can be improved from both ends of the basic applied research spectrum. It introduces the concept of translational scholarship and examines real world value in developing relevant interventions. Each area of coverage reviews current findings on autism from basic research and then discusses the latest applied research.

literature to create a roadmap for researchers clinicians and scientist practitioners to develop new effective strategies as children adolescents and adults with autism continue to learn and grow Featured coverage includes Why practice needs science and how science informs practice The social learning disorder of stimulus salience in autism Assessment and treatment of problem behaviors associated with transitions Understanding persistence and improving treatment through behavioral momentum theory The behavioral economics of reinforcer value Increasing tolerance for delay with children and adults with autism Autism Service Delivery is an essential resource for researchers clinicians and scientist practitioners and graduate students in the fields of developmental psychology behavioral therapy social work clinical child and school psychology occupational therapy and speech pathology

Handbook of Intelligence

Sam Goldstein, Dana Princiotto, Jack A. Naglieri, 2014-12-08 Numerous functions cognitive skills and behaviors are associated with intelligence yet decades of research has yielded little consensus on its definition Emerging from often conflicting studies is the provocative idea that intelligence evolved as an adaptation humans needed to keep up with and survive in challenging new environments The Handbook of Intelligence addresses a broad range of issues relating to our cognitive and linguistic past It is the first full length volume to place intelligence in an evolutionary cultural framework tracing the development of the human mind exploring differences between humans and other primates and addressing human thinking and reasoning about its own intelligence and its uses The works of pioneering thinkers from Plato to Darwin Binet to Piaget Luria to Wechsler are referenced to illustrate major events in the evolution of theories of intelligence leading to the current era of multiple intelligences and special education programs In addition it examines evolutionary concepts in areas as diverse as creativity culture neurocognition emotional intelligence and assessment Featured topics include The evolution of the human brain from matter to mind Social competition and the evolution of fluid intelligence Multiple intelligences in the new age of thinking Intelligence as a malleable construct From traditional IQ to second generation intelligence tests The evolution of intelligence including implications for educational programming and

policy The Handbook of Intelligence is an essential resource for researchers graduate students clinicians and professionals in developmental psychology assessment testing and evaluation language philosophy personality and social psychology sociology and developmental biology

The Cambridge Handbook of Intelligence Robert J. Sternberg, Scott Barry Kaufman, 2011-05-30 This volume provides the most comprehensive and up to date compendium of theory and research in the field of human intelligence Each of the 42 chapters is written by world renowned experts in their respective fields and collectively they cover the full range of topics of contemporary interest in the study of intelligence The handbook is divided into nine parts Part I covers intelligence and its measurement Part II deals with the development of intelligence Part III discusses intelligence and group differences Part IV concerns the biology of intelligence Part V is about intelligence and information processing Part VI discusses different kinds of intelligence Part VII covers intelligence and society Part VIII concerns intelligence in relation to allied constructs and Part IX is the concluding chapter which reflects on where the field is currently and where it still needs to go
