Subcellular Biochemistry Vol 18 Intracellular Parasites:

Intracellular Parasites José-Luis Avila, J. Robin Harris, 2013-11-11 Volume 18 of the Subcellular Biochemistry series which specializes in various aspects of the biochemistry of the intracellular parasites was initially proposed by Jose Luis Avila and strongly supported by myself as Series Editor of Sub cellular Biochemistry Considerable assistance was received from Professor Frank Wunderlich University of Dusseldorf and more particularly from Dr Michael Miles London School of Hygiene and Tropical Medicine during the compilation of the list of possible chapters Our initial aim was to present a comprehensive survey of this broad field of study Although some interesting topics have been lost due to authors backing out late in the production schedule of the book the manuscripts that were submitted have provided a useful over view of the subject with notable strength within the field of Leishmania The 13 chapters of the book have been grouped according to subject The first five chapters deal with Leishmania and are followed by two chapters on Trypanosoma cruzi two on the malarial parasites and two on the Coccidia The final two chapters cover the Microsporidia and chemotherapy respectively

Subcellular Biochemistry J. Robin Harris, 2013-11-11 In Volume 25 leading experts present studies on the value of increased ascorbic acid intake and explore its specific contributions to human and animal health

Novel Immunization Strategies Against Protozoan Parasites D. J. McKeever, 1995-01-01

Parasites of the Colder Climates Hannah Akuffo, Inger Ljungström, Ewert Linder, Mats Wahlgren, 2002-12-05 The parasitic load in cold northern climates is widely under appreciated Many texts on parasitology concentrate on tropical parasitic infections so the reader can be forgiven for thinking that parasites are not a problem in the northern part of the world Parasites of the Colder Climates redresses the balance by focusing on parasites indigenous to the region

Transport and Trafficking in the Malaria-Infected Erythrocyte Gregory R. Bock, Gail Cardew, 2008-04-30 There is an urgent need to uncover new therapies that will protect against malaria as the parasite becomes increasingly resistant to available drugs and this book offers insights into three interrelated aspects of the malaria infected erythrocyte The transport of solutes into and out of the infected cell and the use of specific trafficking pathways in drug targeting The traffic of proteins produced by the intracellular parasite as an essential process for the biogenesis of transport systems The relationship between the transport of drugs into the infected cell and the mode of drug action and drug resistance

Endocytic Components: Identification and Characterization J.J.M. Bergeron, J. Robin Harris, 2013-11-11 In step with the rapid growth of research into the biochemical and functional characterization of the endosome Volume 19 surveys the recent advances in the methodological aspects of this field Coverage includes the use of free flow electrophoresis to define endosome subpopulations the endosomal compartments in rat hepatocytes the role of endosomes in transmembrane signalling and six additional articles

Maintaining Cultures for Biotechnology and Industry Jennie C. Hunter-Cevera, Angela Belt, 1996-02-21 To retain their usefulness cultures that manufacture economically valuable products must be uncontaminated viable and genetically stable Maintaining Cultures for

Biotechnology and Industry gives practical advice necessary to preserve and maintain cells and microorganisms important to the biotechnology and pharmaceutical industries in ways that ensure they will continue to be able to synthesize those valuable metabolites This book covers not just those strains currently being used but also those yet to be discovered and engineered This text is essential for anyone working with cultures who wants to avoid the frustration of losing strains and needs to be able to devise and evaluate new strategies for preservation Written by hands on experts in their respective fields Contains helpful tables and protocols for preserving or maintaining cells cultures and viruses Discusses means to preserve cells by freezing lyophilization drying cyoprotection spore storage continuous propagation and subculturing when absolutely necessary and others Gives information needed to test cultures for stable retention of important characteristics Gives principles needed to devise and evaluate preservation strategies for newly identified and newly engineered cells and organisms Lists culture sources for each class of organism Includes information for characterizing and monitoring recombinant organisms especially important because of their propensity for genetic stability Discusses the history of the continually evolving field of culture preservation Examines the importance of genetically stable cultures as it relates to maintaining patent positions

Mycoplasma Cell Membranes Shlomo Rottem, Itzhak Kahane, 2012-12-06 The mycoplasmas a trivial name used to denote organisms included in the class Mollicutes are a group of prokaryotic organisms comprising more than 120 species distinguished from ordinary bacteria by their small size and the total lack of cell walls The absence of a cell wall in mycoplasmas is a characteristic of outstanding importance to which the mycoplasmas owe many of their peculiarities for example their morphological instability osmotic sensitivity unique ion pumping systems resistance to antibiotics that interfere with cell wall biosynthesis and susceptibility to lysis by detergents and alcohols The fact that the mycoplasma cells contain only one membrane type the plasma membrane constitutes one of their most useful properties for membrane studies once the membrane is isolated it is uncontaminated with other membrane types Another advantage in using mycoplasmas as models for membrane studies stems from the fact that their membrane lipid composition can be altered in a controlled manner This characteristic results from the partial or total inability of the mycoplasmas to synthesize long chain fatty acids and cholesterol making mycoplasmas dependent on the supply of fatty acids from the growth medium The ability to introduce controlled alterations in the fatty acid composition and cholesterol content of mycoplasma membranes has been utilized in studying the molecular organization and physical properties of biological membranes

Biology of the Lysosome John B. Lloyd, Robert W. Mason, 2012-12-06 Volume 27 provides a comprehensive review of current knowledge of lysosome function in mammalian cells The book's unique contribution is its series of chapters that offers unparalleled treatment of the metabolic activities of lysosomes
