Substances Producing Pain Itch:

Substances Producing Pain and Itch Cyril Arthur Keele, Desirée Armstrong, 1964 *Substances Producing Pain and Itch* Cyril Arthur Keele, Desirée Armstrong, 1964 *Itch* E. Carstens, Tasuku Akiyama, 2014-02-25 Advances in itch research have elucidated differences between itch and pain but have also blurred the distinction between them There is a long debate about how somatic sensations including touch pain itch and temperature sensitivity are encoded by the nervous system Research suggests that each sensory modality is processed along a fixed direction *Itch* Gil Yosipovitch, Malcolm W. Greaves, Alan B. Fleischer, Jr., Francis McGlone, 2004-01-06 Offering details on the pharmacology of itch techniques of itch evaluation and neurogenic itch this reference presents new concepts in the neurophysiology and central mechanisms of itch animal models of itch and processing of histamine itch in the human cerebral cortex The text clarifies itch in systemic and skin disease exploring renal itch Pharmacology of the Skin II, 2012-12-06 The recent interest in the pharmacology of the skin and the treatment of its diseases has come about for two reasons The first is a realisation that many aspects of pharmacology can be studied as easily in human skin as in animal models where they may be more relevant to human physiology and disease Examples of this are the action of various vasoactive agents and the isolation of mediators of inflammation after UV irradiation and antigen induced dermatitis The second reason is the fortuitous realisation that a pharmacological approach to the treatment of skin disease need not always await the full elucidation of aetiology and mechanism For example whilst the argument continued unresolved as to whether the pilo sebaceous infection which constitutes acne was due to a blocked duct or to a simple increase in sebum production 13 cis retinoic acid was found quite by chance totally to ablate the disease again whilst cyclosporin fresh from its triumphs in organ transplantation has been found able to suppress the rash of psoriasis it has resuscitated the debate on aetiology We are therefore entering a new era in which the pharmacology and clinical pharmacology of skin are being studied as a fascinating new way of exploring questions of human physiology and pharmacology as well as for the development and study of new drugs use of which will improve disease control and at the same time help to define pathological mechanisms Methods in Pain Research Lawrence Kruger, 2001-06-22 In the past two decades pain research has become one of the most rapidly growing areas of neuroscience activity *Methods in Pain Research* brings together in a single volume a survey of the methods that can be used to study a reaction or sensory report in humans that can only be inferred by indirect means in animal or tissues studies It presents **The Neurobiology of Pain** Northern Neurobiology Group (Great Britain). Symposium, 1984 *Neurovascular Immunology* Thomas C. Moore, 1992-10-28 *Neurovascular Immunology* provides an in depth exploration of the neurovascular branch of the neuro immune axis The book includes discussions regarding the role of neurovascular molecules and their evolutionary history in biological defense their major functions in invertebrates their roles in terrestrial vertebrates and their involvement in the organization and function of the vascular and nervous systems including the immune response defense system The book will

appeal to all researchers practitioners and students interested in the functions of the nervous vascular and immune response systems **Presynaptic Inhibition and Neural Control** Pablo Rudomin,Ranulfo Romo,Lorne M. Mendell,1998 This is a timely review of the mechanisms underlying the presynaptic control of synaptic transmission and the role they play in sensory and motor behavior Early chapters offer a detailed account of the anatomy biophysics and physiology of synaptic transmission at the peripheral and central synapses focusing on the presynaptic control of transmitter release Later chapters explore the organization of neural pathways leading to the presynaptic inhibition of transmitter release in segmental reflex pathways A final section provides examples of the operation of presynaptic control mechanisms during specific sensory and motor functions in mammals including humans Integrating synaptic transmission and CNS functions at the systems level this volume will be of particular interest to researchers studying both areas **Chemical Mediators of the Acute**

Inflammatory Reaction M. Rocha E Silva,J. Garcia Leme,2013-10-22 International Series of Monographs in Pure and Applied Biology Modern Trends in Physiological Sciences Volume 37 Chemical Mediators of the Acute Inflammatory Reaction traces the history of investigation into the acute inflammatory reaction from the early observations in invertebrates to the experiments of therapeutic significance for humans This book focuses on mediators that are accepted as being commonly involved in the inflammatory reaction such as histamine kinins serotonin prostaglandins and permeability factors The topics discussed include the phagocytic system and antibody production factors which influence phagocytosis measurement of the acute inflammatory reaction and combined actions of mediators The reaction to injury and manifestation of inflammation and biochemical aspects of anti inflammatory drug reaction are also covered This volume is beneficial to anatomists biochemists physiologists immunologists pathologists pharmacologists and clinicians interested in acute inflammatory reaction
