

10 Characteristics of Successful Engineers

1. Team Player

Teamwork drives the successful completion of a project. No one can complete a project on their own. They need others to contribute.

2. Continuous Learning

Technology and methodologies are constantly changing. Staying up to date with the latest developments puts you ahead of the field.

3. Creativity

It may sound cliché, but successful engineers have an innate ability to "think outside the box".

4. Problem Solving

Any project, no matter how big or small, will face problems. An engineer must be able to effectively address these as they arise.

5. Analytical Ability

Engineers are required to think analytically in order to fully define a problem and develop solutions suited to the problem.

6. Communication Skills

For an engineer, communication means the ability to not only understand technical complexities, but the ability to succinctly and effectively translate technical jargon into layman's terms without patronising others.

7. Logical Thinking

An engineer must know how the system works, what can go wrong and how to fix it. This requires an ability to think logically, and evaluate and understand each element that makes up the system.

8. Attention to Detail

Successful engineers pay meticulous attention to the smallest of details.

9. Mathematical Ability

To be a successful engineer you must have outstanding math skills.

10. Leadership

Successful engineers also need well-developed "soft skills" so they can smoothly perform non-technical duties.

Successful Engineer Personal And Professional Skills For Engineers:

Successful Engineer J. Campbell Martin, 1993 *Holistic Engineering Education* Domenico Grasso, Melody Burkins, 2010-03-01

Holistic Engineering Education Beyond Technology is a compilation of coordinated and focused essays from world leaders in the engineering profession who are dedicated to a transformation of engineering education and practice. The contributors define a new and holistic approach to education and practice that captures the creativity, interdisciplinarity, complexity, and adaptability required for the profession to grow and truly serve global needs. With few exceptions, today engineering students and professionals continue to receive a traditional technically based education and training using curriculum models developed for early 20th century manufacturing and machining. While this educational paradigm has served engineering well, helping engineers create awe-inspiring machines and technologies for society, the coursework and expectations of most engineering programs eschew breadth and intellectual exploration to focus on consistent technological precision and study. Why this dichotomy? While engineering will always need precise technological skill, the 21st century innovation economy demands a new professional perspective that recognizes the value of complex systems thinking, cross-disciplinary collaborations, economic and environmental impacts, sustainability, and effective communication to global and community leaders, thus enabling engineers to consider the whole patient of society's needs. The goal of this book is to inspire, lead, and guide this critically needed transformation of engineering education. *Holistic Engineering Education Beyond Technology* points the way to a transformation of engineering education and practice that will be sufficiently robust, flexible, and systems-oriented to meet the grand challenges of the 21st century with their ever-increasing scale, complexity, and transdisciplinary nature. Charles Vest, President, National Academy of Engineering, President Emeritus, MIT. This collection of essays provides compelling arguments for the need of an engineering education that prepares engineers for the problems of the 21st century. Following the National Academy's report on the Engineer of 2020, this book brings together experts who make the case for an engineering profession that looks beyond developing just cool technologies and more into creating solutions that can address important problems to benefit real people. Linda Katehi, Chancellor, University of California at Davis. This superb volume offers a provocative portrait of the exciting future of engineering education. A dramatically new form of engineering education is needed that recognizes this field as a liberal art, as a profession that combines equal parts technical rigor and creative design. The authors challenge the next generation of engineering educators to imagine, think, and act in new ways. Lee S. Shulman, President Emeritus, The Carnegie Foundation for the Advancement of Teaching, and Charles E. Ducommun, Professor of Education, Emeritus, Stanford University. **The**
