**Commutative Algebra, Volume I** Oscar Zariski, Pierre Samuel, 2019-11-13 A precise fundamental study of commutative algebra this largely self contained treatment is the first in a two volume set Intended for advanced undergraduates and graduate students in mathematics its prerequisites are the rudiments of set theory and linear algebra including matrices and determinants The opening chapter develops introductory notions concerning groups rings fields polynomial rings and vector spaces Subsequent chapters feature an exposition of field theory and classical material concerning ideals and modules in arbitrary commutative rings including detailed studies of direct sum decompositions The final two chapters explore Noetherian rings and Dedekind domains This work prepares readers for the more advanced topics of Volume II which include valuation theory polynomial and power series rings and local algebra

*Commutative Algebra, Volume II* Oscar Zariski, Pierre Samuel, 2019-11-13 The second text in this two book series extends the classical material of Volume I which focuses on field theory and the ideal theory of Noetherian rings and Dedekind domains The connection of Volume II's material to algebraic geometry is stressed throughout the presentation making this book a practical introduction to some basic concepts and the arithmetical foundations of algebraic geometry The opening chapter deals with properties of places and is followed by a chapter that explores the classical properties of polynomial and power series rings and their applications to algebraic geometry The final chapter examines the theory of local rings which provides the algebraic basis for the local study of algebraic and analytical varieties Several helpful Appendixes conclude the text
