implementable petroleum exploration applications Summaries of analogue and theoretical models are provided as an essential backdrop to the structure and stratigraphy of various geological settings **Thermal History of Sedimentary Basins** Nancy D. Naeser, Thane H. McCulloh, 2012-12-06 The collection of papers in this volume is a direct result of the Society of Economic Paleontologists and Mineralogists Research Symposium on Thermal History of Sedimentary Basins Methods and Case Histories held as part of the American Association of Petroleum Geologists Annual Convention in New Orleans in March 1985 The original goal of the symposium was to provide a forum where specialists from a variety of disciplines could present their views of methods that can be used to study the thermal history of a sedimentary basin or an important portion of a basin An explicit part of that goal was to illustrate each method by presentation of a case history application The original goal is addressed by the chapters in this volume each of which emphasizes a somewhat different approach and gives field data in one way or another to illustrate the practical usefulness of the method The significance of our relative ignorance of the thermal conductivities of sedimentary rocks especially shales in efforts to understand or model sedimentary basin thermal histories and maturation levels is a major thrust of the chapter by Blackwell and Steele Creaney focuses on variations in kerogen composition in source rocks of different depositional environments and the degree to which these chemically distinct kerogens respond differently to progressive burial heating **Regional Geology and Tectonics** David G. Roberts, A.W. Bally, 2012-12-31 Volume 1A Principles of Geologic Analysis A how to primer describes the basic concepts petroleum geologists and students need to understand hydrocarbon exploration in a broad range of geological settings globally Volume 1B Phanerozoic Rift Systems and Sedimentary Basins Incorporates industry data to present regional seismic lines and cross sections to accurately document and analyze proven hydrocarbon systems It also includes summaries of analogue and theoretical models as an essential backdrop to the structure and stratigraphy of a variety of geological settings Volume 1C Phanerozoic Passive Margins Cratonic Basins and Global Tectonic Maps Focuses on both volcanic and non volcanic passive margins as well as cratonic basins critical habitats for hydrocarbons It provides a unique basis for comparison of different passive margins and for an understanding of their structural and stratigraphic evolution as well as their petroleum systems especially useful to explorationists working in deep water basins and researchers examining the tectonic evolution of the continent ocean transition A vast amount of data to enable hydrocarbon play assessments and analysis on passive margins is also included in this thorough yet accessible reference Individual volumes can also be purchased 9780444530424 9780444563569 9780444563576 Volume 1A discusses in detail the principles of regional geological analysis and the main geological and geophysical tools used in basin analysis Volume 1B features simple documentation and analysis of major rift systems developed in contrasting geological settings as well as in depth analyses of active rifts in various regions all over the world for immediately implementable petroleum exploration applications Volume 1C features real world case studies and analyses useful summaries of analogue and theoretical models thorough

documentation of numerous passive margins that are the focus of deep water oil exploration and unique tectonic maps facilitating access to exact basin locations and their tectonic settings A companion website offers select downloadable images from the books <http://booksite.elsevier.com/9780444530424/index.php> **Micropalaeontology, Sedimentary**

Environments and Stratigraphy J. E. Whittaker, M. B. Hart, 2010 Dennis Curry was a remarkable polymath and philanthropist leading a double life as one of the UK's most gifted amateur geologists whilst at the same time being an extremely successful businessman as Managing Director of Currys Ltd This Festschrift authored by friends and specialists from Britain and France pays tribute to his often seminal research as well as exhibiting the wide range of his geological interest It contains 12 chapters and covers several differing aspects of micropalaeontology pteropods diatoms and especially foraminifera Strontium Isotope Stratigraphy Hampshire Basin stratigraphy and palaeogeography as well as major contributions on English Channel sedimentology and the great faunal turnover affecting mammals at the Eocene Oligocene boundary A scientific appreciation of Dennis Curry the professional amateur with recollections of former colleagues at University College London where he was Visiting Professor together with an assessment of the valuable collections he established and donated to The Natural History Museum are also included Copiously illustrated this book is a must for all geologists Origin and Evolution of the Cape Mountains and Karoo Basin Bastien Linol, Maarten J. de Wit, 2016-09-03 This

book describes the latest research on the geological geochemical geochronological biological and geomorphic evolution of the unique and relatively pristine landscape of the Cape Mountains and the Karoo Basin a region in South Africa that is currently being targeted for shale gas exploration and development With up to date graphics maps drill core and seismic data it offers the latest observations and synthesis and highlights areas of ongoing research The work presented also considers a wider connection of the Cape Karoo system to other basins in Central Gondwana including South America thus following in the footsteps of A L du Toit Clearly there is still much to be learned before shale gas development can be considered and this book provides some timely perspectives *African Basins* R.C. Selley, 1997-11-20 Following on from the first 2 books in the series *Sedimentary Basins of the World* which covered Chinese Sedimentary Basins Volume 1 and South Pacific Sedimentary Basins Volume 2 comes Volume 3 on African Basins Africa covers a larger land area than the USA Europe India and the ASEAN nations put together It is rich in natural resources including oil gas coal and nearly every metalliferous mineral Yet Africa is still one of the least explored continents This book brings together in one volume concise reviews of basins previously documented in a vast array of diffuse literature It also contains some of the first detailed accounts of several basins which have never before been described in such depth These include the onshore Owambo Iullemmeden and Sudanese rift basins and the offshore basins of southern Africa The contributions are by authors and teams of authors with great knowledge and experience of the basins that they describe The thirteen chapters are arranged in 3 parts covering North Africa Central Africa and Southern Africa and the book is illustrated by maps cross sections stratigraphic sections and

seismic lines Each chapter includes a comprehensive bibliography and the book concludes with a subject index For academic geologists researching the geology of Africa and for industrial geologists seeking natural resources within African sedimentary rocks this book is an invaluable source of information *Transactions of the Geological Society of South Africa* Geological Society of South Africa,1909

account of ore forming processes revised and updated The revised second edition of Introduction to Ore Forming Processes offers a guide to the multiplicity of geological processes that result in the formation of mineral deposits The second edition has been updated to reflect the most recent developments in the study of metallogeny and earth system science This second edition contains new information about global tectonic processes and crustal evolution that continues to influence the practice of economic geology and maintains the supply of natural resources in a responsible and sustainable way The replenishment of depleted natural resources is becoming more difficult and environmentally challenging There is also a change in the demand for mineral commodities and the concern around the non sustainable supply of critical metals is now an important consideration for planners of the future The book puts the focus on the responsible custodianship of natural resources and the continuing need for all earth scientists to understand metallogeny and the resource cycle This new edition Provides an updated guide to the processes involved in the formation of mineral deposits Offers an overview of magmatic hydrothermal and sedimentary ore forming processes Covers the entire range of mineral deposit types including the fossil fuels and supergene ores Relates metallogeny to global tectonics by examining the distribution of mineral deposits in space and time Contains examples of world famous ore deposits that help to provide context and relevance to the process oriented descriptions of ore genesis Written for students and professionals alike Introduction to Ore Forming Processes offers a revised second edition that puts the focus on the fact that mineral deposits are simply one of the many natural wonders of geological process and evolution

Hydrothermal Mineral Deposits Franco Pirajno, 2012-12-06 This book is intended primarily for exploration geologists and post graduate students attending specialist courses in mineral exploration Exploration geologists are engaged not only in the search for new mineral deposits but also in the extension and re assessment of existing ones To succeed in these tasks the exploration geologist is required to be a generalist of the Earth sciences rather than a specialist The exploration geologist needs to be familiar with most aspects of the geology of ore deposits and detailed knowledge as well as experience play an all important role in the successful exploration for mineral commodities In order to achieve this it is essential that the exploration geologist be up to date with the latest developments in the evolution of concepts and ideas in the Earth sciences This is no easy task as thousands of publications appear every year in an ever increasing number of journals periodicals and books For this reason it is also difficult at times to locate appropriate references on a particular mineral deposit type although this problem is alleviated by the existence of large bibliographic data bases of geological records abstracts and papers on computers During my teaching to explorationists and indeed during my years of work as an explorationist the necessity of having a text dealing with the fundamental aspects of hydrothermal mineral deposits has always been compelling Metallic mineral deposits can be categorised into three great families namely 1 magmatic 2 sedimentary and residual 3
